should be here pent up," continued, "confined, con-
fined, in a first floor in Duke Street, Manchester Square,

Miss Wirt, the governess, sat down to entertain
us with variations on 'Such a gettin' up Stairs.'
They were determined to be in the fashion. For the
performance of 'Gettin' up Stairs,' I have no other
name but that it was a *stunner*. . . . When she had
leaped out of the tune slowly, she began a different
manner of 'Gettin' up Stairs,' and did so with a
fury and swiftness quite unexampled. She spun up
stairs; she whirled up stairs; she galloped up stairs;
she rattled up stairs; and then, having got the tu-
to the top landing, as it were, she . . . It down
again shrieking to the bottom floor, where it sank in
a crash, as if exhausted by the breathless rapidity of
the descent. Then Miss Wirt played the 'Gettin'
up Stairs' with the most pathetic and ravishing
solicitude; plaintive moans and sobs issued from
the keys; you wept and trembled as you were gettin'
up stairs. Miss Wirt's hands seemed to faint and
wail, and die in variations. Again, and she went up
with a savage clang and rush of trumpets, as if Miss
Wirt was storming a breach. . . . I wondered the
we did not crack and the chandeliers start out
of the beam at the sound of this earthquake of a
piece of music. 'Glorious creature! but'st thou?'

edit. p. 267. Perhaps it may be an error of the
press. If Mr. Paine had turned to Milton's own
editions of his poetry, he would have found the word
writing the word *stupendous*; as others had
done before him. This form continued also long
after Milton's time: 'In such a *stupendous* man-
ner.' (Bibliotheca Biblica, vol. i. p. 105; 1729).—

It is part of the scutellated bone of a *sturgeon*, being flat, of a porous or cellular constitution on one side, the cells being worn down and smooth on the other.—*Woodward.*

That this is the *sturio* of Doran, as quoted by Athenæus, is very probable, as well from the account he gives of its form, as of its nature. He says its mouth is always open, in which it agrees with the *sturgeon*; and that it conceals itself in the hot months: this shews it to be a fish of a cold nature, which is confirmed by the history of the European fish of this species, given by Mr. Forster, in his Essay on the Volga, who relates that they are scarcely ever found in that river in spring or summer, but in vast quantities in autumn and winter, when they crowd from the sea under the ice, and are then taken in great numbers. Whether the acipenser is the *sturgeon* of the moderns, may be doubted, otherwise Ovid would never have spoken of it as a foreign fish. . . . Caviare is made of the roes of this, and also of all the other sorts of *sturgeons*, dried, salted, and packed up close. The best is said to be made of those of the *sterlet*, a small species frequent in the Volga and Vola. Icthyocolla, or bingles, is also made of the sound of our fish, as well as that of the others, but the Beluga affords the best.—*Pennant, British Zoology.*

The *sturgeon* is occasionally taken on the East coast, and frequently brought to the London market from various localities. When caught in the Thames, within the jurisdiction of the lord mayor, it is considered a royal fish; the term being intended to imply that it ought to be sent to the king; and it is said that the *sturgeon* was exclusively reserved for the table of Henry the First of England. . . . It has long been noticed by the fishermen of the Solway Frith, that two species of *sturgeons* are occasionally entangled in their salmon-nets; the one with the blunt nose, and the other with a sharp one, the latter species being the more common of the two.—*Farrell, History of British Fishes.*

A fine specimen of the blunt-nosed *sturgeon* was taken in the Frith of Forth in the month of July, 1815, and brought to the Edinburgh market for sale, the head of which I preserved. A few weeks after another was taken in the Tay, which differed in no respect from the former, except in sexual distinction.—*Parnell, Transactions of the Royal Society of Edinburgh, vol. xiv.*

Sturgeons [in] the type of a genus of cartilaginous fishes, with free gills, having the body more or less covered with bony plates in longitudinal rows. The mouth is placed beneath the snout, is small and edentulous, but protracile. Soft feelers or cirri are attached beneath the snout. The bodies of the vertebrate retain the primitive condition of an undivided gelatinous cord. The *sturgeons* ascend the larger rivers of Europe in great abundance. The flesh of most of the species is wholesome and agreeable food; their ova are converted into caviare, and their air-bladder affords the finest isinglass. The *sturgeon* which is occasionally captured on our east coast is

the Acipenser sturio of Linnaeus. By statute 16 Edw. II. c. 1, all *sturgeons*, wherever caught, are declared to vest in the crown by virtue of their dignity, and are to be delivered without purchase.—*Owen, in Brander and Cox, Dictionary of Science, Literature, and Art.*

Stat. v. n. Stutter. Obsolete.

She spake somewhat thick,
Her frowns did stammer and *stat*,
But she was a fickle slut. *Shelton, Poems, p. 133.*

2. Stuttering speech.

I ought to call on him; and, as I feel ashamed not to have done so before, I wish you would accompany me to his house. One happy word from you would save me a response into *stutter*. When I want to apologise I always *stutter*.—*Lord Lytton, What will he do with it? b. vii. ch. xix.*

Stutterer. s. One who stutters.

Stutterers run to stammer more when the wind is in that hole.—*Howell, Letters, l. 1, 27.*

Or wallowing mid a feast of acorns lay,
The untoward creatures to the *sty* I drove,
And whistled all the way.

2. Any place of bestial debauchery.

[Dutch, *stier*.] Small boil, or pimple, on the margin of the eyelid, arising from inflammation of the parts about the roots of the eyelash and the Meibomian glands, the medical term being *hordeola*; supposed to be curable by rubbing with a ring, or some piece of gold: (in the extracts the allusion is to that kind of blindness or shortsightedness which required a bribe to relieve it).

I have no gold to cure it, not a penny.
Beaumont and Fletcher, Mad Lover, v. 4.

There is a *sty* grown 'er the eye o' th' Bull,
Which will go near to blind the constellation.—

Id., Elder Brother, II. 4. (Nares by H. and W.)

Stygian. adj. Pertaining to Styx, one of the poetical rivers of hell.

At that so sudden blaze, the *Stygian* throng
Bent their aspect. *Milton, Paradise Lost, l. 130.*

Styl. s. [Lat. *stylus*; from Gr. *στύλος* = pillar, column. In Forcellini the spelling is *stilus*, under which is found the reason for its being so: 'Grace columnam [stylus] significat . . . ejus ratione sunt qui stylus

scribunt, quamquam cum in Latinam linguam vox translata sit, consuetudo obtinuit ut Latini etiam literis scribatur.' How far this rule applies depends upon the extent to which a given word has been naturalised. That the word before us was so we learn from the quantity, which, though long in Greek, was short in Latin, at least when it signified a pen—'scepse stylum veritas.' (Horace.) Even in Latin, however, the use of *y* is common, while in English it is predominant.]

1. Manner of writing with regard to language.

Happy is your grace,
That can translate the splendours of fortune
Into so quiet and so sweet a style.

Shakespeare, As you like it, li. 1.
Their beauty I will rather leave to poets, than
venture upon so tender and nice a subject with my
sweeter style.—*Dr. H. More.*

Prayer words in prayer places make the true definition of a style.—*Sieff.*
Let some lord but own the happy lines,
How the wit brightens, how the style refines!

Pope, Essay on Criticism, li. 420.
The thirtieth section of Marquis Charla had provided that fægen merchants should be free from all tributes, except the ancient customs; and it was strange to suppose that natives were owing to the benefit of that enactment. Yet, owing to the ambiguous and elliptical style so common in our older laws, this was open to dispute, and could perhaps only be explained by usage.—*Hallam, View of the State of Europe during the Middle Ages, pt. iii. ch. viii.*

'Quam multa! quam pauci!' is a fine expression, which was employed to characterize a concise style pregnant with meaning.—*I. Diaristi, Curiosities of Literature, Some Insignia Theophrasti.*

In 'As you like it,' though extremely readable, has our great fault; it is to speak it in a single word, an affected style. . . . In this style of 'witty and convoluted' mirth, considerable part of the book is written.—*Curlye, Critical and Miscellaneous Essays, State of German Literature.*

Upon the whole, it cannot be said that Milton's English prose is a good style. It is in the first place, not perhaps in vocabulary, but certainly in genius and construction, the most Latinian of English styles; but it does not merit the commendation bestowed by Pope on another style which he conceived to be formed after the model of the Roman eloquence, of being 'so Latin, yet so English all the while.' It is both soul and body Latin, only in an English dress. . . . Rich as his style often is, it never moves with any degree of rapidity or easy grace even in passages where such qualities are most required.—*Craig, History of English Literature, vol. ii. p. 61.*

2. Manner of speaking appropriate to particular characters.

No style is held for base, where love well named is.
Sir P. Sidney.

There was never yet philosopher
That could endure the toothache patiently,
However they have writ the style of gods,
And made a pish at chance and sufferance.
Shakespeare, Much Ado about Nothing, v. 1.

3. Mode of painting.

The great style stands alone, and does not require, perhaps does not well admit, any addition from inferior beauties. The ornamental style also possesses its own peculiar merit; however, though the union of the two may make a sort of composite style, yet that style is likely to be more imperfect than either of those which go to its composition.—*Sir J. Reynolds.*

4. Manner or mode of composition in music.

5. Title; appellation.

Ford's a knave, and I will aggravate his style; thou shalt know him for knave and cuckold.—*Shakespeare, Merry Wives of Windsor, li. 2.*

Above that style, O more than mortal fair!
Let not an humble suppliant sue in vain,

Propitious hear our prayer,
Whether the style of Titan please thee more,
Whose purple rays th' Ætherean adorns,
Pope, Translation of the First Book of the Æneid of Virgil.

6. Course of writing. Rare.

While his thoughts the lightning day beguile,
To gentle Arcite let us turn our style.
Dryden, Palamon and Arcite, li. 33.

7. Pointed iron used anciently in writing on tables of wax.

When writing began to be common on tables of wood, covered over with coloured wax, men made

use of a sort of bodkin, made of iron, or brass, or bone; which in Latin is called *stylus*.—As to the form of the style, it was made sharp like a pointed needle at one end, to write with; and the other end blunt and broad, to scratch out what was written, and not approved of, to be amended; as that 'versere stylum,' i.e. to turn the style, signifies, in Latin, to blot out.—*Maney, Origin of Letters, p. 64.*

They wrote with an iron bodkin, as they did on the other substances we have noticed. The *stylus* was made sharp at one end to write with, and blunt and broad at the other, to deface and correct easily; hence the phrase 'versere stylum,' to turn the style, was used to express blotting out. But the Romans forbade the use of this sharp instrument, from the circumstances of many persons having used them as daggers. A schoolmaster was killed by the Pugnillars or table-books, and the style of his own scholars. They substituted a *stylus* made of the bone of a bird, or other animal; so that their writings resembled engravings. . . . By the word pen in the translation of the Bible, we must understand an iron style. *J. Diaristi, Curiosities of Literature, Origin of the Materials of Writing.*

8. Anything with a sharp point, as a graver; pin of a dial.

Placing two styles or needles of the same steel, touched with the same loadstone, when the one is removed but half a span, the other would stand like Heron's pillar.—*Sir T. Browne.*

9. In Botany. See third extract.

Style is the middle prominent part of the flower of a plant, which adheres to the fruit or seed: 'tis usually slender and long, whence it has its name.—*Quincy.*

The figure of the flower-leaves, stamens, apices, style and seed-veel.—*Rap.*

The organs immediately within the petals are called *stamens*, which are considered the male apparatus of plants. . . . They consist of a bundle of spiral vessels surrounded by cellular tissue, called the filament, terminated by a cellular case, finally opening and discharging its contents called the anther. . . . The organ which occupies the centre of a flower, within the stamens and disk, if the latter be present, is called the pistil. It is the female apparatus of flowering plants. . . . It consists of one or more carpels. . . . Each carpel is subdivisible into three parts; viz. the ovary, the style, and the stigma. . . . The style is the part which converts the ovary and stigma. It is frequently absent, and is no more essential to a pistil than a petiole to a leaf, or a filament to an anther.—*Lindley, Elements of Botany, Structural and Physical, § 418, 414.*

Style of court. Practice observed by any court in its way of proceeding.

Style. v. a. Term; name.

The strife of glory. *Milton, Paradise Lost, vi. 238.*

Fortune's gifts, my actions
May stile their own rewards.

Sir J. Denham, The Sophy.

His conduct might have made him styled
A father, and the nymph his child.

Swift, Cadmus and Tereus.

Rome . . . was not a jot more invested with authority than any other city; the Greek capital had long taken her place. . . . Nor does it seem to me exceedingly material, if the case be such, that Charlemagne was not styled emperor of the West, or successor of Augustulus. It is evident that his empire, relatively to that of the Greeks, was western; and we do not find that either he or his family ever claimed an exclusive right to the imperial title.—*Hallam, View of the State of Europe during the Middle Ages, ch. l. note 2.*

The political opinions predominant in the school were what in ordinary parlance are styled Tory.—*B. Disraeli, Coningsby, b. i. ch. vii.*

Sub, in Composition, is Latin for under. Subaltern. adj.

b. As a term in the Logic of Opposition. Agreeing, as a proposition, in quality, but differing in quantity: as, 'All A is B,' and 'Some A is B,' where both propositions are affirmative; and 'No A is B,' and 'Some A is not B,' where both are negative.

Two propositions are said to be opposed to each other, when, having the same subject and predicate, they differ in quantity or quality, or both. It is evident that with any given subject and predicate, you may state four distinct propositions, viz. universal affirmative, universal negative, particular affirmative, and particular negative; any two of which are said to be opposed; hence there are four different kinds of opposition, viz. the two universals are called contraries to each other; the two particular affirmatives or negatives, *subalternæ*; and the universal affirmative and particular negative, or universal negative and particular affirmative, contradictories. . . . In ordinary language, however, and in some logical treatises, propositions which do not differ in quality (viz. *subalternæ*), are not reckoned as opposed. . . . In *subalternæ*, the truth of the particular (which is called the *subalternæ*) follows from the truth of the universal (*subalternæ*), and the falsity of the universal of the falsity of the particular: . . . *subalternæ* differ in quantity alone; contraries, and also *subcontraries* in quality alone.—*Archbishop Whately, Elements of Logic*, b. ii. ch. ii. § 3.

Accidental wounds often burrow beneath the skin; perhaps to a considerable extent. But these, usually, partake more of the contused and lacerated, than of the incised character. They inflame almost invariably; and often it is an early duty of the surgeon, in their treatment, to undo their *subcutaneous* character by free incision; so as to avert danger, otherwise likely to occur, in consequence of acute suppuration.—*Miller, Principles of Surgery*, p. 679; 1850.

Subdialect. s. Subordinate dialect.

The Italian is the smoothest and softest running language that is, for there is not a word, except some few monosyllables, conjunctions, and prepositions, that end with a consonant in the whole language; nor is there any vulgar speech which hath more *subdialects* in so small a tract of ground, for Italy itself affords above eight. . . . There is besides these *subdialects* of the Italians, Spanish, and French, another speech, . . . called Franco, which may be said to be composed of all three.—*Howell, Letters*, b. ii. letter 69.

Subdistinction. s. Subordinate distinction.

Never labouring by hard words, and then by needless distinctions and *subdistinctions* to amuse his hearers, and set glory to himself.—*J. Walton, Life of Hooker*. (Ord MS.)

Subdiversify. v. a. Diversify with subordinate distinctions what is already diversified.

Subdivide. v. a. Divide a part into yet more parts.

In the rise of eight, in tones, there be two beams, or half notes; so as if you divide the tone equally, the eight is but seven whole and equal notes; and if you *subdivide* that into half notes, as in the steps of a lute, it maketh the number thirteen.—*Bacon, Natural and Experimental History*.

When Brutus and Cassius were overthrown, soon after Antonius and Octavianus brake and *subdivided*.—*Id.*

The glad father glories in his child,
When he can *subdivide* a fraction.

Lord Roscommon.
When the progenies of Cham and Japhet swarmed
into colonies, and those colonies were *subdivided*
into many others, in time their descendants lost the
primitive rites of divine worship, retaining only the
notion of one deity.—*Dryden.*

Subdivision. s.

1. Act of subdividing.

When any of the parts of any idea are further di-
vided, in order to a clear explication of the whole,
this is called a *subdivision*; as when a year is di-
vided into months, each month into days, and each
day into hours, which may be further subdivided
into minutes and seconds.—*Wallis, Logic.*

2. Parts distinguished by a second division.

How can we see such a multitude of souls cast
under so many *subdivisions* of misery, without re-
flecting on the absurdity of a government that sa-
crifices the happiness of so many reasonable beings
to the glory of one?—*Addison.*

In the decimal table the *subdivisions* of the cubit,
as span, palm, and digit, are deduced from the
shorter cubit.—*Arbuthnot.*

Subdoleous. adj. [Lat. *subdolosus*, from *dolus*
= trick, fraud.] Cunning; subtle; sly.
Subdoleous and *deceitful* actions.—*Bishop Reg-
nolds, On the Passions*, ch. xix.

Barrow, Sermons, serm. v.

Subduable. adj. Capable of being subdued.
Rare.

He hath indeed confessed in a certain place, that
he had a natural touch of enthusiasm in his com-

length perfectly *subduable*.—*Dr. Ward, Life of
Henry More*, p. 13.

Subdual. s. Act of subduing.

Good is not only produced by the *subdual* of the
passions, but by the turbulent exercise of them.—
Warrinton.

Subduces. v. a. [Lat. *subduco* (from *duco* =
I lead); pass. part. *subductus*.]

1. Withdraw; take away.

He doth not always *subduce* his Spirit with his
visible presence; but his very outward withdrawing
is worthy of our sighs, worthy of our tears.—*Bishop
Hall, Contemplations*, l. iv.
Our Master is not *subduced*, but risen.—*Ibid.*
Never was the earth so peevish as to forbid the
sun when it would shine on it, or to sink away, or
subduce itself from its rays.—*Hammond, Works*, iv.
638.

2. Subtract by arithmetical operation.

Take the other operation of arithmetic, subduc-
tion: if out of that supposed infinite multitude of
antecedent generations we should *subduce* ten, the
residue must be less by ten than it was before, and
yet still the quotient must be infinite.—*Sir M. Hale.*

Subduct. v. u. Subduce.

Or nature fail'd in me, and left some part
Not proof enough such object to sustain;
Or from my side *subducting*, took perhaps
More than she thought. *Milton, Paradise Lost*, viii. 531.
From the opposite sides equal quantities are *sub-
duct*.—*Bishop Berkeley, Analyst*, § 30.

Subduction. s.

1. Act of taking away.

O God, thine arm is strong and mighty; all thy
creatures rest themselves upon that, and are com-
fortably sustained. O that we were not more cap-
able of distrust than thine omnipotent hand is of
weariness and *subduction*!—*Bishop Hall, On
animal Motions*, § 101.

Possibly the Divine Beneficence *subducting* that
infirmity which it communicated from the time of
their first creation, they were kept in a state of im-
mortality till that moment of the *subduction*.—*Sir
M. Hale, Originations of Mankind*.

2. Arithmetical subtraction.

Suppose we take 'the other operation of arithme-
tic, *subduction*: if out of that infinite multitude of
antecedent generations we should *subduce* ten, the
residue must be less by ten than it was before that
subduction, and yet still the quotient be infinite.—
Sir M. Hale.

Subdue. v. a.

1. Crush; oppress; sink; overpower.

Nothing could have *subdued* nature
To such a lowness, but his unkind daughters.
Shakespeare, King Lear, iii. 4.
If aught therein enjoy'd were worthy to *subdue*
The soul of man. *Milton, Paradise Lost*, viii. 584.

2. Conquer; reduce under a new dominion.

That dost the lions and fell tigers tame,

Who can express the glory of thy might?

Their curious eye
Discerns their great *subdoler's* awful mien
And corresponding features fair.

Even are great *subdolers* of acrimony, useful in
learnedness and coughs, and extremely enoious.—
Arbuthnot.

Subduplex. adj. [Lat. *duplex* = double.] Con-
taining one part of two.

As one of these under pulleys doth abate half of
that heaviness which the weight hath in itself, and
cause the power to be in a *subduplex* proportion
unto it, so two of them do abate half of that which
remains, and cause a subquadruple proportion, and
three a subsextuple.—*Bishop Wilkins, Mathematical
Magick.*

Subduplicato. adj. Subduplex.

The motion generated by the forces in the whole
passage of the body or thing through that space,
shall be in a *subduplicato* proportion of the forces.

case of *husta* = lance, spear; this being the
symbol of a sale by auction in ancient
Rome; *venale sub hastâ* = to be sold by
auction.] Sale by auction. *No true English
word.*

One of the best parts of their law is the way of
selling estates, which is likewise practised in Switz-
erland, and is called *subhastation*, from the Roman
custom of selling *sub-hastâ*.—*Bishop Burnet,
Tracts*, p. 9.

—*Sir E. Dering, Speeches in Parliament*, p. 11.

Subinféudation. s. Subordinate inféu-
dation, i. e. feudal tenure under one who was
himself holding under a superior.

In England even the practice of *sub-inféudation*
... was checked by Magna Charta, and forbidden by
the statute of Edward I. called Quia Emptores.
A custom very singular in effect to *sub-inféudation*,
was the tenure by *franchise* which prevailed in many
parts of France. Primogeniture, in that extreme
which our common law has established, was un-
known, I believe, in every country upon the Con-
tinent. ... In the early times of the feudal policy,
when military service was the great object of the
relation between lord and vassal, this, like all other
sub-inféudation, was rather advantageous to the
former. For when the homage of a fief was divided,
the service was diminished in proportion. ... What-
ever opposition, therefore, was made to the rights of
sub-inféudation or *franchise* would indicate a decay in
the military character, the living principle of feudal
tenure.—*Hollom, View of the State of Europe
during the Middle Ages*, ch. ii. pt. i.

The spirit of a feudal monarchy, which compelled
every lord to act by the advice and assent of his
immediate vassal, established no relation between
him and those who held land of his hands. They
were included, so far as he was concerned, in the
superior, and the feudal incident were due to him
from the whole of his vassal's fief, whatever tenant
might possess it by *sub-inféudation*.—*Ibid.*, ch. v. a
pt. iii.

Subingression. s. [Lat. *ingredior* = I step
in; pret. part. *ingressus*.] Secret, or im-
perfect entrance.

upon the accession of the air sucked out; which
forceth the neighbouring air to a violent *subingres-
sion* of its parts. —*Boyle.*

Subitaneous. adj. [Lat. *subitaneus*.] Sudden.

Subitany. adj. [so accented in the previous
edition; the evidence, however, how the
author pronounced it, is deficient. Subi-
taneous. *Rare.*

This which I have now commented is very *sub-
itany*, and, I fear, confused.—*Hales, Golden Reversion*,
p. 290: 1630.

Subjacent. adj. [Lat. *subjacens*, *subjacentis*.
The accent here is doubtful; the pronun-
ciation *adjacent* being more correct, and
by no means uncommon. The form *adja-
cent* suggests that the *a* is long, which is
erroneous. Whichever way we utter the
form, we must remember that the Latin
form is not *adjacens*, but *adjacens*. *Ma-
tatis mutandis*, this is what applies to, and
has been said under, Adjacent.] Lying
under.

The superfluous parts of mountains are washed
away by rains, and borne down upon the *subjacent*
plains.—*Woodward.*

subjicere = lay, cast, throw, place under;
subjectio, -onis.]

distinct people and government, and was himself
prince over them.—*Leake.*

the Father, and will be so also, in his human
capacity, after he has delivered up his mediatorial
kingdom.—*Bishop Waterland.*

3. Exposed; liable; obnoxious.

Most *subject* is the fattest soil to weeds;
And he, the noble image of my youth,
Is overpowered with them.
Shakespeare, Henry IV. Part II, iv. 3.
All human things are *subject* to decay,
And who a fate summons mortals must obey.
Dryden, Macbeth, l. 1.

4. Obedient; manageable.

round and circular figure, which is the most perfect

that they may be worn on the least finger of the
hand.—*Time's Storehouse*, 699. (Old MS.)

Subject. s.

1. One who lives under the dominion of
another: (opposed to *governor*).

Every subject's duty is the king's; but every subject's soul is his own.—*Shakespeare, Henry V. iv. 1.*

As I do long and wish to be a subject.

Id., Henry VI. Part II. iv. 3.

Those I call subjects which are governed by the ordinary laws and magistracies of the sovereign.—*Sir J. Davies, Discourse of the State of Ireland.*

We must understand and confess a king to be a father; a subject to be a son; and therefore honour to be by nature most due from the natural subject to the natural king.—*Holaday.*

The subject must obey his prince, because God commands it, human laws require it.—*Swift.*

We are subjects so but only by their choice. And not from birth did forced dominion take, Our prince alone would have the public voice.

Milton, Paradise Lost, ix. 23.

Here he would have us fix our thoughts; nor are they too dry a subject for our contemplation.—*Dr. H. More, Discourse of Christian Philosophy.*

I will not venture on so nice a subject with my severe style.—*Ibid.*

Make choice of a subject beautiful and noble, which being capable of all the graces that colours, and cleanness of design can give, shall afford a perfect art, an ample field of matter wherein to expatiate.—*Dryden.*

The subject of a proposition is that concerning which anything is affirmed or denied.—*Watts, Logic.*

My real design is, that of publishing your praises to the world; not upon the subject of your noble birth.—*Swift.*

3. That in which anything inheres or exists: (here is nearly an equivalent of the commoner term Substance.)

Anger is certainly a kind of baseness, as it appears well in the weakness of those subjects in whom it reigns, children, women, old folks, sick folks.—*Baron, Essays, Of Anger.*

4. In Logic. One of the two terms by which, in conjunction with the copula, a proposition is constructed; and, of these two, the name of that object of thought concerning which the statement is made; the corresponding term, i.e. the word which delivers what the statement is, being the predicate; the copula telling us whether the two are or are not in agreement. In 'A is B,' or 'A is not B,' 'A' is the subject, 'B' the predicate, 'is' or 'is not' the copula.

Every proposition consists of a subject and a predicate. In English these are distinguished by their position, the subject standing first, the predicate last. 'Happiness is pleasure.' Here 'happiness' is the subject, 'pleasure' the predicate. If we change their order, and say 'Pleasure is happiness,' then 'pleasure' becomes the subject, and 'happiness' the predicate. In Greek these are distinguished not by any order or position, but by help of the article, which the subject always assumes, and the predicate in most instances (some few excepted) rejects.—*Harris, Hermes, b. ii. ch. i.*

A syllogism being resolvable into three propositions, and each proposition containing two terms; of these terms, that which is spoken of is called the subject; that which is said of it, the predicate; and these two are called the terms (or extremes) because, logically, the subject is placed first, and the predicate last, and in the middle the copula, which indicates the act of judgment, as by it the predicate is affirmed or denied of the subject. The copula must be either 'is' or 'is not,' which expressions indicate simply that you affirm or deny the predicate, or the subject. The substantive-verb is the only verb recognised by logic, inasmuch as all others are compound; being resolvable by means of the verb 'to be' and a participle or adjective; e.g. 'The Romans conquered.' The word 'conquered' is both copula and predicate, being equivalent to 'were' (copula) victorious' (predicate).—*A. Archbishop Whately, Elements of Logic, b. ii. ch. i. § 2.*

5. In Grammar. Nominative case; i.e. the only case of a noun which can, by itself, constitute the subject of a proposition.

6. In Mental Philosophy. Active and immediate sentient or thinking element in the formation of a conception, notion, or idea, concerning something thought about,

i.e. an Object. In this explanation the words active and immediate must not be neglected; inasmuch as, in a thought concerning another thought, both elements are sentient; though only one (except, of course, so far as it is a cause of thought) is immediate and active. As Object and Subject are thus contrasted with, and complementary to, each other, Object and Objective are referred to; the extracts illustrating each other. Ego, too, is referred to; the only subject known primarily to the thinker being himself (i.e. myself, I, or Ego).

The thing which is not of the mind, and can be imagined to exist without the mind, is the object; the mind itself is called the subject of that object. Thus, even a relation between two minds may be an object to a third mind. Logic considers only the connexion of the subjective and objective; it treats of things 'non secundum se, sed secundum eorum quod habent in animo.'—*De Morgan, Sylabus of a Proposed System of Logic, § iv.*

In analysing every intellectual act we necessarily make between ourselves, the conscious subject, and that of which we are conscious, the object. 'I know,' and 'something is known by me,' are convertible propositions; every mental act which is not thus resolvable belongs to the emotional part of our nature, as distinguished from the intellectual and perceptive. For the distinction between subject and object, the neglect of which has been the cause of infinite confusion and perplexity, we are indebted to the schoolmen, from whom it was derived (through Wolf and Leibnitz) by Kant and the modern German philosophers.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

As the first element in a compound, or as adjectival in construction (with matter). Mass of materials upon which an opinion, delivered in a proposition, has to be formed; i.e. matter for which a predicate has to be found (i.e. something to be said about it), and also a copula stating whether the two terms agree or disagree. The sense of subject here is purely logical, dealing solely with subject as the name of a term in a proposition. In no case can it be treated as equivalent to Subjective.

I enter into the subject matter of my discourse.—*Dryden.*

Subject, v. a.

1. Put; place; lay under.

The medal, faithful to its charge of fame,
Through climes and ages bears each form and name:
In one short view, subjected to our eye,
Gods, emperors, heroes, sages, beauties lie.
Pope, Moral Essays, v. 31.

2. Reduce to submission; make subordinate; make submissive.

My nation was subjected to your hands;
It was the force of conquest; force with force
Is well rejected. *Milton, Samson Agonistes, 1205.*

3. Enslave.

I live on bread like you, feel want like you,
Taste grief, need friends like you; subjected thus,
How can you say to me, I am a king?

Shakespeare, Richard II. iii. 2.

I see thee, in that fatal hour,
Subjected to the victor's cruel power,
Led hence a slave. *Dryden, Last Parting of Hector and Andromache.*

The blind will always be led by those that see, or fall into the ditch: and he is the most subjected, the most enslaved, who is so in his understanding.—*Locke.*

4. Expose; make liable, or obnoxious to anything.

If the vessels yield, it subjects the person to all the inconveniences of an erroneous circulation.—*Arbuthnot.*

5. Submit; make unaccountable.

God is not bound to subject his ways of operation to the scrutiny of our thoughts, and confine himself to do nothing but what we must comprehend.—*Locke.*

Before the conduct of the unlucky licenser had been brought under the consideration of Parliament, the Commons had resolved, without any division, and, as far as appears, without any discussion, that the Act which subjected literature to a censorship should be continued.—*Macaulay, History of England, ch. xiz.*

6. Make subservient.

Man he made, and for him built
Magnificent this world, and earth his seat;

Him lord pronounced, and, O indently!

Subjected to his servile angel-wings.

Milton, Paradise Lost, ix. 152.

Subjected, part. adj. In extract, subjunctive.

Down the cliffs as fast

To the subjected plain.

Milton, Paradise Lost, xii. 630.

Subjection, s.

1. Act of subduing.

After the conquest of the kingdom, and subjection of the rebels, enquiry was made who they were, that, fighting against the king, had saved themselves by flight.—*Sir M. Hale.*

2. State of being under government.

Became the subjection of the body to the will is by natural necessity, the subjection of the will unto God voluntary; we therefore stand in need of direction after what sort our wills and desires may be rightly conformed to him.—*Hawker, Ecclesiastical Polity.*

How hard it is now for him to frame himself to subjection, that, having once set before his eyes the hope of a kingdom, hath found encouragement.—*Spenser, View of the State of Ireland.*

Both in subjection now to sensual appetite.

Milton, Paradise Lost, ix. 1123.

Subjective, adj. Having the character of, relating to, connected with, constituted by, a subject.

1. As a subject in a political sense.

What eye can look, through clear love's spectacle,

On virtue's majesty that shines in beauty,

But, as to nature's divin'st miracle,

Performs not to it all subjective duty?

Sir J. Davies, Witle's Pilgrimage, sign. D. 2.

2. As a subject in logic and mental philosophy.

Certainty, according to the schools, is distinguished into objective and subjective: objective is when the proposition is certainly true in itself; and subjective, when we are certain of the truth of it.—*Watts.*

Kant... declared that a science of existence was beyond the compass of our faculties: that pure reason, as purely subjective, and conscious of nothing but itself, was therefore unable to ensure the reality of what lay beyond the phenomena of its personal modifications.... In the philosophy of mind, subjective denotes what is to be referred to the thinking subject, the ego: objective what belongs to the object of thought, the non-ego. It may be said, perhaps, to say a few words in vindication of our employment of these terms.... The exact distinction of Subject and Object was first made by the schoolmen; and to the schoolmen the vulgar languages are principally indebted for what precision and analytic subtlety they possess. These correlative terms correspond to the first and most important distinction in philosophy; they embody the original antithesis in consciousness of self and not-self a distinction which, in fact, involves the whole science of mind; for psychology is nothing more than a determination of the Subjective and the Objective in themselves, and in their reciprocal relations.—*Sir W. Hamilton, Discussions on Philosophy and Literature, p. 5. 1853.*

The reader must... bear in mind the distinction between relative and absolute motion.... If a spectator at rest view a certain number of moving objects, they will group and arrange themselves to his eye, at each successive moment in a very different way from what they would do were he in active motion among them.... How is such a spectator to disentangle from each other the two parts of the apparent motions of these external objects, that which arises from the effect of his own change of place, and which is therefore only apparent (or, as a German metaphysician would say, subjective, having reference only to him as perceiving it),—and that which is real (or objective—having a positive existence, whether perceived by him or not)? By what rule is he to ascertain, from the appearances presented to him while himself in motion, what would be the appearances were he at rest? It by no means follows, indeed, that he would even then at once obtain a clear conception of all the motions of all the objects. The appearances so presented to him would have still something subjective about them.—*Sir J. Herschel, Outlines of Astronomy.*

The fundamental antithesis of philosophy of which I have to speak has been brought into great prominence in the writings of modern German philosophers, and has conspicuously formed the basis of their system. They have indicated this antithesis by the terms Subjective and Objective. According to the technical language of old writers, a thing and its qualities are described as Subject and Attribute; and thus a man's faculties and acts are attributed of which he is the Subject. This mind is the Subject of which ideas inhere. Moreover, the man's faculties and acts are employed upon external objects; and from objects all his sensations arise. Hence the own part of a man's knowledge which belongs to his own mind, is Subjective: that which flows in upon him from the world external to him, is Objective. And from the world external of nature, there is always some act of thought which depends upon himself,

and some matter of thought which is independent of him, there is, in every part of his knowledge, a *subjective* and an objective element. The combination of the two elements, the *subjective* or ideal, and the objective or observed, is necessary, in order to give us any insight into the laws of nature.—*Hercot, History of Scientific Ideas*, vol. I. p. 35: 1834.

Sensations and ideas in our knowledge are like matter and form in bodies. Matter cannot exist without form, nor form without matter: yet the two are altogether distinct and opposite. There is no possibility either of separating, or of confounding them. The same is the case with sensations and ideas. Ideas are not transformed, but informed sensations; for without ideas, sensations have no form. The sensations are the objective, the ideas the *subjective* part of every act of perception.—*Id., System of Organism*, Kantianism, b. I. aphorisms vi. vii. viii.

Hegel, for his part, will not view the principles of pure thought and pure sense as a *subjective*, as attributes that belong to us, and are only in us, as attributes only human: he considers them, on the contrary, as absolutely universal general principles, on which, and according to which, the all or whole is formed and fashioned.—*J. H. Stirling, Secret of Hegel*, vol. I. p. 127: 1863.

We can conceive now how Hegel was enabled to get beyond the limited *subjective* form of Kant's mere system of human knowledge, and convert that system into something universal and objective.—*Id.*, vol. I. p. 132.

The fiery lions that light up the day with the rockets of genius, have yet, in *subjective* vanity, *subjective* impatience, hardly opportunity for the slow and laborious accumulation of principles. By such men, then, Hegel is not to be judged, nor by the revolt of such men is his school destroyed.—*Id., Translation of Schlegel's Handbook of the History of Philosophy*, p. 356: 1848.

Terms are used in four different senses. Two objective, directed towards the external object, or, to use old phrases, of first intention, or representing first notions. Two *subjective*, directed towards the internal mind, of second intention, or representing second notions. In objective use the name represents 1. The individual object; . . . 2. The individual quality. . . . In *subjective* use the name represents 1. A class, a collection of individual objects, named after a quality which is in thought as being in each one; 2. An attribute, the notion of quality as it exists in the mind to be given to . . . a class. Attribute is to individual quality what class is to individual object.—*De Morgan, Syllogism of a Proposed System of Logic*, §§ 113, 115, 117.

In painting the term *subjective* is now sometimes used in criticism to indicate that the representation of an object or event is modified by, or subjected to, the idiosyncrasy of the artist; and this is in contradistinction to objective, when the object is represented with strict individuality. Rubens and Rembrandt were *subjective* painters; the Dutch and Flemish painters of still life, on the other hand, have been objective in their works.—*Braude and Cox, Dictionary of Science, Literature, and Art*.

Subjectively, adv. In a subjective manner. Kant conceived these relations (the intuitions and categories) *subjectively*, or from the point of view of our thought. Hegel conceived them objectively, or from the point of view of all thought.—*J. H. Stirling, Secret of Hegel*, vol. I. p. 127: 1863.

Subjoin, v. a. Add at the end; add afterwards; add in the way of an appendix; tack on.

He makes an excuse from ignorance, the only thing that could take away the fault; namely, that he knew not that he was the high-priest, and *subjoins* a reason.—*South, Sermons*.

Subjugate, v. a. [Lat. *subjugatus*, pass. part. of *subjungo*; *subjungo*, -onis: *jugo* = yoke.] Conquer; subdue; bring under dominion by force; bring under the yoke; tame; reduce.

O fair virgin, that hast warm'd the breast Whose sov'reign dictates *subjugate* thee!—*Prior, Solomon*, li. 183. He *subjugated* a king, and called him his vassal.—*Baker*.

Subjugation, s. Act of bringing under the yoke; state of that so brought. This was the condition of the learned part of the world, after their *subjugation* by the Turks.—*Sir M. Hale*.

Subjunction, s. [Lat. *junctio* = joining; *jungo* = I join; pass. part. *junctus*.] 1. State of being subjoined; act of subjoining.

The verb undergoes in Greek a different formation; and in dependence upon, or *subjunction* to, some other verb.—*Clarke*.

2. In *Grammar*. Conjunction; (this latter being the *commoner word*). See under *Subjunctive*.

Vol. II.

Subjunctive, adj. [Lat. *subjunctus*; Fr. *subjunctif*.]

1. Subjoined to something else.

A few things more, *subjunctive* to the former, were thought need to be elucidated in preachers at that time.—*Bishop Hacket, Life of Archbishop Williams*, p. 87.

2. In *Grammar*. Name of a mood; a verb being in the *subjunctive* mood when, instead of standing alone, it depends, directly or indirectly, upon another verb, with which it is connected by either a conjunction or a relative pronoun. Conjunctive and potential are words with nearly the same meaning, the three being interchangeable; the preference of one to the other being often dependent on the language from which the grammatical nomenclature is taken, and sometimes upon the mere habit of the grammarian. Of the three terms, conjunctive is the most general, potential the most specific.

Sublapsarian, adj. [Lat. *lapsus*, pret. part. of *labur* = I slide, slip; *lapsus* = a slide, slip, fall.] Done after the fall of man; (opposed to Supralapsarian).

The degree of reprobation, according to the *sublapsarian* doctrine, being neither else but a non-perdition, or non-election of some persons whom God left as he found, involved in the guilt of the first Adam's transgression, without any actual personal sin of their own, when he withdrew some others as fully as they.—*Hammond*.

Sublapsarian, s. One who maintains the sublapsarian doctrine.

The *sublapsarian* say, that Adam having sinned freely, and his sin being imputed to all his posterity, God did consider mankind, thus lost, with an eye of pity; and having chosen to rescue a great number out of this lost state, he decreed to send his Son to die for them, to accept of his death on their account, and to give them such assistance as should be effectual both to convert them to him, and to make them persevere to the end; but for the rest, he framed no positive act about them, only he left them in that lapsed state without intending that they should have the benefit of Christ's death, or of efficacious and persevering assistance.—*Bishop Hacket, On the Articles*, art. xvii.

Sublate, v. a. [Lat. *sublatum* = carried, borne away; *sublatio*, -onis.] Taken off; removed. *Rare*.

By his means and industry the comm in wealth of the realm was preserved from final destruction and perpetual calamity, and the anarchy of the mischief *sublated* and plucked away.—*Hall, Henry VI.* an. 1. (Rich.)

Sublation, s. [Lat. *sublatio*, -onis.] Act of taking away.

He could not be forsaken by a *sublation* of union.—*Bishop Hall, Remains*.

Sublevaminous, s. [Lat. *sublevamen*: support.] Supporting. *Rare*.

By God's upholding and *sublevaminous* providence to his meek will, he orders, guides, and governs all.—*Fieldham, Discourse*, ii. 2. (Ord MS.)

Sublevation, s. [Lat. *sublevatio*, -onis; pass. part. *sublevatus*; *levo* = I raise, lift.] Act of raising on high.

I will be able perfectly to instruct you, not only in the longitude or true meridian of the island, but also in the just latitude thereof; that is to say, in the *sublevation* or height of the pole in that region.—*Sir T. More, Utopia, Gates to Bantide*.

The dissentients and insurrections of the Miles in England, though encouraged and supported by foreign forces, yet failed of success against this new king and his government, because they were not followed by any general commotion or *sublevation* of the people. *Sir W. Temple*, vol. ii. p. 600. (Ord MS.)

Sublieutenant, s. Subordinate lieutenant.

The literary *sublieutenant* converts the poets. . . . This *sublieutenant* can remark that, in drive incursions, on streets, on highways, at inns, everywhere men's minds are ready to kindle into a flame.—*Carlyle, The French Revolution*, pt. ii. b. ii. ch. n.

Sublimable, adj. Capable of being sublimed.

I had subdivided the body of gold into such minute particles that they were *sublimable*.—*Boyle, Works*, vol. viii. p. 623. (Rich.)

Sublimableness, s. Attribute suggested by Sublimable; quality of admitting sublimation.

He obtained another concrete as to taste and smell, and easy *sublimableness*, as common salt ammoniac.—*Boyle*.

Sublimary, adj. Elevated. *Rare*.

First to the master of the feast, This health is consecrated, Thence to each *sublimary* guest Whose soul doth desire This nectar to raise and aspire. *Brome, The Painter's Entertainment*, (Rich.)

Sublimate, v. a. Exalt; heighten; elevate.

The precepts of Christianity are so excellent and refined, and so apt to cleanse and *sublimate* the more gross and corrupt, as shows fresh and ideal never revealed in.—*Dr. H. More, Devay of Christian Piety*.

With all his quick susceptibility for whatever was beautiful and bright, Milton seems to have needed the soothing influences of the regularity and music of verse fully to bring out his poetry, or to *sublimate* his imagination to the true poetical state. The passion which is an ennobling flame in his verse half suffocates him with its smoke in his prose.—*Craig, History of English Literature*, vol. ii. p. 61.

Sublimate, s.

1. Anything raised by fire in the retort.

Enquiring the manner of subliming, and what metals endure subliming, and what body the *sublimate* makes. *Bacon*.

2. Quicksilver raised in the retort.

The second manner of manufacturing calomel is to grind very carefully four parts of corrosive *sublimato* (bichloride of mercury) with three parts of quicksilver, adding a little water or spirit. It is then introduced into a glass slide, and sublimed at a temperature gradually raised. The quicksilver combines with the denticulobine, and converts it into the protochloride or calomel. The pressure of corrosive *sublimato* in calomel is easily detected by directing alcohol upon it, and testing the decanted alcohol with a drop of caustic potash, when the characteristic brick-colored precipitate will fall if any of the poisonous salt be present.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sublimate, adj. Raised by fire in the vessel.

The particles of mercury, uniting with the acid particles of spirit of salt, compose mercury *sublimato*; and, with the particles of sulphur, cinthar.—*Sir I. Newton, On Opticks*.

Sublimated, part. adj. Elevated; refined.

And as his actions rose, so raise they still their vein In words, whose weight best suits a *sublimated* strain. *Drayton*.

Not only the gross and illiterate souls, but the most aerial and *sublimated*, are rather the more proper fuel for an immaterial fire.—*Dr. H. More, Devay of Christian Piety*.

Sublimation, s.

1. In *Chemistry*. Distillation of dry substances, the volatile parts being thrown off by the action of heat.

Separation is wrought by weight, as in the settlement of liquors, by heat, by precipitation, or *sublimation*; that is, a calling of the several parts up or down, which is a kind of attraction.—*Bacon, Natural and Experimental History*.

Since oil of sulphur per calomel is of the same nature with oil of vitriol, may it not be inferred that sulphur is a mixture of volatile and fixed parts so strongly cohering by attraction, as to ascend together by *sublimation*?—*Sir I. Newton, On Opticks*.

Sublimation differs very little from distillation, excepting that in distillation only the fluid parts of bodies are raised, but in this the solid and dry; and that the matter to be distilled may be either solid or fluid, but *sublimation* is only concerned about solid substances. There is also another difference, namely, that rarefaction, which is of very great use in distillation, has hardly any room in *sublimation*; for the substances which are to be sublimed being solid, are incapable of rarefaction; and so it is only impulse that can raise them.—*Quercus*.

Sublimato is any solid matter resulting from condensed vapours, and *sublimations* is the process by which the volatile particles are raised by heat, and condensed into a crystalline mass.—*Ure, Dictionary of Arts, Manufactures, and Mines*. (See also under *Sublime*.)

2. Exaltation; elevation; act of heightening, or improving.

She turns Bodies to spirits, by *sublimation* strange. *Sir J. Barrow, Immortality of the Soul*.

Shall be pre-vent to religious attainments, who is defective and short in moral, which are but the rudiments and first draught of religion, as religion is the perfection, refinement, and *sublimation* of morality?—*South, Sermons*.

Sublimatory, s. See extract.

Sublimatory [in] a vessel used by chemists in sublimation, i. e. separating certain parts of a body, and

driving them to the top of the vessel in the form of a very fine powder. — *Tyrrhill, Glossary to Chaucer.* (Meli.)

Sublime, adj. [Lat. *sublimis*.] — The origin of this, though a point of Latin rather than of English etymology, claims notice from the extent to which a great scholar and a great metaphysician have occupied themselves concerning it. In his 'Essays on the Sublime,' largely consisting of criticisms of Burke's 'On the Sublime and Beautiful,' Dugald Stewart, without committing himself to any positive opinion as to what the etymology *was*, pronounced what it *was not*; i.e. condemned the derivation from *supra* = above, and *linus* = mind. The derivation, however, thus condemned, found a supporter in Dr. Parr, who argued in favour of *sub* being the equivalent to the Greek *hypo* rather than *hypo*, and to the leading idea in *linus* being the *tenacity* (by which anything inclined to mount aloft would be kept down) of *clay*, rather than ordinary dirtiness or muddiness. In this view the metaphysician seems to have acquiesced; and with him the scholarship of England in general. An abstract of Dr. Parr's argument is given in the Appendix to the third volume of Dugald Stewart's works.]

1. High in place; exalted aloft.

They sum'd their pens, and soaring th' air sublime
With clang despoil'd the ground.
Milton, Paradise Lost, vii. 421.
And dire Tisiphone there keeps the ward,
Dryden, Translation of the Æneid, vi. 748.
A dragon's fiery form belied the God;
Sublime in radiant spheres he rode,
While he to fair Olympus press'd,
And while he sought her snowy breast,
And round her tender waist he curl'd,
And stamp'd an image of himself, a sovereign of the world.
Id., Alexander's Feast.

2. High in excellence; exalted by nature.

My earthly strain'd to the light
In that celestial colony sublime.
Milton, Paradise Lost, viii. 454.
Can it be that souls sublime
Return to visit our terrestrial rhyme;
And that the generous mind, released by the death,
Can covet bay limbs?
Dryden, Translation of the Æneid, vi. 874.

3. High in style or sentiment; lofty; grand.

Easy in words thy style, in sense sublime.
Prior, Epistle to Dr. Sherlock.
It appears to me that none of these theorists have paid sufficient attention to the word *sublime* in its literal and primitive sense; or to the various natural associations founded on the physical and moral concomitants of great altitude. It is surely a problem of some curiosity to ascertain what led the Greeks to employ the word *hypsos* in this metaphorical acceptance, and what has determined the moderns to adopt so universally the same figure and to give to its meaning a still greater degree of latitude. Neither term can be found in our language which conveys precisely the same notion, and to this notion it is now so exclusively appropriated, that its literal import is seldom thought of. To use the word *sublimity*, in prose composition, as synonymous with altitude or height would be affectation and pedantry. — *Dugald Stewart*.

4. Elevated by joy.

All yet left of that revolted rout,
Heaven fall'n, in station stood of just array,
Sublime with expectation.
Milton, Paradise Lost, x. 531.
Their hearts were join'd and *sublime*,
Drunk with idolatry, drunk with wine.
Id., Mæmnon Agonistes, 1000.

5. Lofty of mien; elevated in manner.

He was *sublime*, and almost tumorous, in his looks and gestures. — *Sir H. Wotton*.
His fair large front and eye *sublime* declared
Absolute rule.
Milton, Paradise Lost, iv. 300.

Used substantively, with *the*. In the previous editions it is entered as an actual substantive; we cannot, however, say a *sublime*. The explanation is 'the grand or lofty style,' followed by the remark that the *Sublime* is a Gallicism, but now naturalized.

Gallicism, however, is scarcely the right name for the construction; which, besides being Greek rather than French, is, to a great extent, English; in other words, any adjective may be construed substantively by taking the definite article. The true French element in the import of the word was the criticism to which it had given origin.

The *sublime* rises from the suddenness of the light the magnificence of the words, or the harmonious and lively turn of the phrase; the perfect *sublime* arises from all three together. — *Addison*.
Longinus strenuously all his laws,
And is himself the great *sublime* he draws.

Pope, Essay on Criticism, iii. 673.
The *sublime* of nature is the sky, the sun, moon, stars, &c. The profound of nature is gold, pearls, precious stones, and the treasures of the deep which are inestimable as unknown. But all that lies between these as corn, flowers, fruit, animals, and things for the use of men are of mean price, and so common as not to be greatly esteemed by the critics. — *Id., Art of Sinking in Poetry*, ch. vi.
Error is in all cases whatsoever, either more openly or latently, the ruling principle of the *sublime*. — *Burke, On the Sublime and Beautiful*, pt. ii. sect. ii.

Opposed as the *sublime* and beautiful usually are by a sort of antithetic arrangement, in our works of rhetoric, or of the philosophy of taste, they are far from being essentially distinct, but, at least in the greater number of instances, shadow into each other; the *sublime*, in these cases, being only one position of a series of feelings, of which the beautiful, as it has been termed, is also a part. The emotions of sublimity may, indeed, be excited by objects which no diminution of the attendant circumstances, or of intensity of quantity, could render beautiful; but which, on the contrary, when thus diminished, are disgusting or ridiculous, rather than meretricious. Yet, though there are, unquestionably, cases of this sort . . . the greater number of cases are, as immediately, of a different sort; in which, by gradual increase or diminution of qualities, or alteration of the attendant circumstances, the emotion is progressively varied till, by chance after change, what was merely beautiful becomes grand, and ultimately *sublime*; the extremes seeming, perhaps, to have no resemblance but this very difference of the extremes. — *Dr. T. Brown, Lectures on the Philosophy of the Human Mind*, lect. lvii.

Sublimity, s.

1. Height of place; local elevation.

2. Height of nature; excellence.

In respect of God's incomprehensible *sublimity* and purity, this is also true, that God is neither a mind nor a spirit like other spirits, nor a light such as can be discerned. — *Sir W. Raleigh*.

3. Loftiness of style or sentiment.

Milton's distinguishing excellence lies in the *sublimity* of his thoughts, in the greatness of which he triumphs over all the poets, modern and ancient, Homer only excepted. — *Addison*.

These principles have an effect on the imagination as well as on the passions. To be convinced of this we need only consider the influence of landscape and depths on that faculty. Any great elevation of place communicates a kind of pride or *sublimity* of imagination, and gives a laurel superiority over those that lie below; and vice versa, a sublime and strong imagination conveys the idea of ascent and elevation. Hence it proceeds that we associate in a manner the idea of whatever is good with that of height, and evil with that of lowness. Heaven is supposed to be above and hell below. A noble genius is called an elevated and sublime one. On the contrary, a vulgar and trivial conception is styled indifferently low or mean. Prosperity is denominated ascent, and adversity descent. Kings and princes are supposed to be placed at the top of human affairs, as peasants and the lowly are said to be in the lowest stations. These methods of thinking and of expressing ourselves are not of so little consequence as they may appear at first sight. — *Hume, Treatise of Human Nature*.

Her favourite science was the mathematical,
Her noblest virtue was her magnanimity;
Her wit (she sometimes tried at wit) was Attic all,
Her serious sayings darken'd to *sublimity*;
In short, in all things she was fully what I call
A prodigy; her morning dress was diaphanous,
Her evening silk, or in the summer, muslin,
And other stuffs, with which I won't stay quarrelling.
Byron, Don Juan, l. 12.

Night measured, with her shadowy cone,
Half way up hill this vast *sublunar* vault.

The moon was hanging low
Over the Asian mountains, and outspread
The plain, the city, and the camp below,
Skirted the midnight ocean's glimmering flow;
The city's moon-lit spires and myriad lamps,
Like stars in a *sublunar* sky did glow.

And fire blazed far amid the scattered camps,
Like springs of flame, which burst where'er swift
Earthquake stamps.

pt. ii. li. iii. ch. iv.

It is a celebrated notion of a patriot, that a house of commons should never grant such *subsidies* as give no pain to the people, lest the nation should acquiesce under a burthen they did not feel.—*Addison.*

Their *subsidy* was sufficiently liberal; but they took care to pay the king, that fit persons might be assigned for its receipt and disbursement, lest it should any way be diverted from the purposes of the war. . . . There was an equally craving demand for *subsidy* at the next meeting of parliament. The commons now made a more serious stand. The speaker, Sir James Pickering . . . reminded the lords of the council of a promise made to the last parliament, that if they would help the king for once with a large *subsidy*, so as to enable him to undertake an expedition against the enemy, he trusted not to call on them again, but to support the war from his own resources. . . . To this George, lord steward of the household, protesting that he knew not of any such promise, made answer by order of the king, that, 'saving the honour and reverence of our lord the king, and the lords there present, the commons did not speak truth in asserting that part of the last *subsidy* should be still in the treasury; it being notorious that a good penny had come into the hands of Walworth and Plunket, appointed and sworn treasure in the parliament, to receive and expend it upon the purposes of the war, for which they had in effect disbursed the whole.' . . . Not satisfied with this general justification, the commons pressed for an account of the expenditure. George was again commissioned to answer, that though it had never been seen, that of a *subsidy* or other grant made to the king in parliament or out of parliament by the commons, any account had afterwards been rendered to the commons, or to any other except the king and his officers, yet the king, to gratify them, of his own accord, without doing it by way of right, would have Walworth, along with certain persons of the council, exhibit to them in writing a clear account of the receipt and expenditure, upon condition that this should never be used as a precedent, nor inferred to be done otherwise than by the king's spontaneous command. The commons were again urged to provide for the public defence, bethink their own concerns as much as that of the king. But they merely shifted their ground, and had recourse to other pretences. They requested that five or six peers might come to them in order to discuss this question of *subsidy*.—*Hallam, Two of the States of Europe during the Middle Ages, pt. iii. ch. viii.*

Substance. s. [*Lat. substantia*; from *sub* = under + *sto* = I stand; pres. part. *stantis*.] Element for element, this compound is the same as the Greek *υποστασις* (*hypostasis*) and the English *under-standing*. —*Swift*.

6. In Mental Philosophy. Correlative of Attribute; the attribute being some quality or relation (as green, heavy, this), taken singly, the substance being the object which, having more qualities or relations than one, is conceived as standing under, supporting, or serving, as a basis for the whole.

The axiom [of the indestructibility of *substance*] depends upon the idea of *substance* which is involved in it: our views of external objects. We unavoidably assume that the qualities and properties which we observe are properties of things;—that the adjective implies a substantive;—that there is, besides the external characters of things, something of which they are the characters. An apple which is red, and round, and hard, is not merely redness, and roundness, and hardness; these circumstances may all alter while the apple remains the same apple. Behind or under the appearances which we see, we conceive something of which we think, or, to use the metaphor which obtained currency among the ancient philosophers, the attributes and qualities which we observe are supported by and inherent in something; and this something is hence called a substratum or *substance*,—that which stands beneath the apparent qualities and supports them. That we have such an idea, using the term 'idea' in the sense in which I have employed it throughout these disquisitions, is evident from what has been already said. The axiom of the indestructibility of *substance* proves the existence of the idea of *substance*, just as the axioms of geometry and arithmetic prove the existence of the ideas of space and number.—*Whewell, Philosophy of the Inductive Sciences*, b. vi. ch. iii. § 2.

Logicians have endeavoured to define *substance* and attribute; but their definitions are not so much apt to draw a distinction between the things themselves, as instructions what difference it is customary to make in the grammatical structure of sentences, according as we are speaking of *substances* or of attributes. Such definitions are rather lessons of English, or of Greek, Latin, or German, than of mental philosophy. An attribute, say the school logicians, must be the attribute of something; colour, for example, must be the colour of something; goodness must be the goodness of something; and if this something should cease to exist, or should cease to be connected with the attribute, the existence of the attribute would be at an end. A *substance*, on the contrary, is self-existent; in speaking about it, we need not put it after its name; a storm is not the storm of anything; the moon is not the moon of anything, but simply the moon.—*J. S. Mill, System of Logic*, vol. i. p. 60: 1844.

Substance... is the name word, in respect to its etymology, as *hypostasis*. ... The difference between the two words consists in the former being of Latin, the latter of Greek, origin. ... Attribute [is] that which we ascribe, give to, lay to the account of, or connect with anything. To pay to one the compliment of being honest is to attribute honesty to him. ... An orange is Round, Yellow, Smooth, Capable (under certain conditions) of exciting Rancid, Fragrant, Sapid, Elastic, &c. When we say that an orange is this, we attribute to it certain properties, or qualities. What are they? The qualities, or properties, of Roundness, Yellowness, Smoothness, Rancidness, Fragrance, Sapidity. ... Let us now suppose that all these attributes are, one by one, taken away, and replaced by others; that instead of an orange striking our eyes and sense of touch as round, it strikes them as square, or rhomboid; that it loses its fragrance and becomes fetid; that it sounds like a bell, and tastes like a loaf of bread. Would the object still be an orange? Would it not be something else?... Divest the orange of all its attributes without supplying it with new ones. What will it be then? Take away its original colour without replacing it by any fresh one. Let it lose its softness without becoming hard, its roundness without becoming of any other form. Annihilate its weight, taste, and smell. Let it have no means of appealing to eye, ear, taste, smell, or touch, so that it become, at one and the same time, imperceptible, insensible, imperceptible. What will it be then? Will it be anything at all?... What becomes of the orange? Is it annihilated by the abstraction of its attributes, and all? Few are prepared to say Yes to this question. Few divest themselves of the notion that sensible and material objects are nothing more than the combination of certain properties, qualities, and attributes, each and all of which may be removed in such a way as to leave an absolute nothing. We rather imagine that, where there are certain attributes in union, there is a certain link which connects them; a basis, or foundation, which supports them; a basis or foundation different from the attributes themselves, something, which they are not, but upon which they rest. This Something Supports them. This something stands under them. This something is the Substance, or Under-standing, of objects, as opposed to, or contrasted with, their Attributes. ... It is, perhaps, unnecessary to say that *substance* as used by logicians, has by no means the sense which so often attaches to it in common conversation, viz. that of Matter or Body. On the contrary, it means anything that can be looked upon as the basis of an attribute. A Ghost is a *substance* of which the most important attribute is its Immateriality or Imcorporeity. On the other hand, it is an undoubted fact, and one of which the explanation readily suggests itself, that the abstract of attributes is easy in proportion as the concrete *substance* is a sensible object, i.e. an object capable of being seen, heard, tasted, smelt, or felt. Terms like Roundness, Roundness, Smoothness, Yellow, are much more readily suggested by Balls, Guinea, Sugar, &c., than by Virtue, Vice, Goodness, Badness, &c., by Deeds and Characters which have to be grasped at by means of the observation and comparison of numerous different actions, performed at different times, by different agents. Of these, the *substance* itself is more or less of an abstraction.—*Dr. R. G. Latham, Leigh*.

What is the whole gist of the alleged inability?... Clearly, our inability to conceive any immateriality or immutability of the soul of being, whether specially regarded under its extension, or its profusion, is as in space or in time, conditions immediately to the principle of the permanence of *substance*. ... Avoid all sensible changes we are convinced that there is something common to all—an immutable reality—which does not change, but is yet the subject of the changes. ... the permanence of *substance*, avoid the attribution of its sensible states.—*Engleby, An Introduction to Metaphysics*.

Berkely has evinced no little sagacity in the arguments he adduces to show the difficulties attendant on the ordinary belief, and the obscurity of our ideas of substance, accident, and extension; maintaining that our senses convey to us no more but sensible impressions, and do not afford us any proof of the existence or *substantiality* of their objects, and that consequently the existence of an external world, independent of our sensations, may be nothing more than a chimera.—*Translation of Tennant's Manual of the History of Philosophy*, p. 334.

Substantiate. v. a.

1. Make to exist.

The accidental of any act is said to be whatever adheres to the act itself already *substantiated*.—*Ayliffe, Parergon Juris Canonici*.

2. Confirm.

After . . . the charge of participation in Darnley's murder had been *substantiated* by evidence at least that she did not disguise, and the whole course of which proceedings created a very unfavourable impression both in England and on the Continent, no time was to be lost by those who considered her as the object of their dearest hopes.—*Maitland, Constitutional History of England*, ch. iii.

I may add that the position I assign to Hered is the position claimed by himself; and every word of these very critics, who would lead all into issues absolutely antagonistic, . . . will be found thoroughly and completely to *substantiate* this.—*J. H. Stirling, Translation of Schlegel's Handbook of the History of Philosophy*, p. 145: 1868.

Substantive. adj.

2. Betokening existence.

One is obliged to join many particulars in one proposition, because the repetition of the *substantive* verb would be tedious.—*Arbuthnot*.

Substantive. s. In Grammar. Name of an object founded upon its properties or qualities, rather than upon its relations; names founded upon its relations rather than qualities, being pronouns, and words suggestive of the names of attributes being adjectives.

Claudian perpetually closes his sense at the end of a verse, commonly called golden, or two *substantives* and two adjectives, with a verb between them to keep the peace.—*Dryden*.

All things whatever either exist as the Energies, or Affections of some other thing, or without being the Energies or Affections of some other thing. If they exist as the Energies or Affections of something else, then they are called Attributes. Thus, to think is the attribute of a Man; to be white, of a Swan; to fly, of an Eagle; to be four-footed, of a Horse. If they exist not after this manner, then are they called *substances*. Thus, Man, Swan, Eagle, and Horse, are none of their Attributes, but all *Substances*, because however they may exist in time and place, yet neither of these, nor of anything else, do they exist as Energies or Affections. And thus all things whatsoever being either *Substances* or Attributes, it follows of course that all words, which are significant as Principles, must needs be significant of either the one or the other. If they are significant of Substances, they are called *Substantives*; if of Attributes, they are called Attributes. So that all words whatever, significant as Principles, are either *Substantives* or Attributes.—*Harris, Hermes, or Philosophical Enquiry concerning Universal Grammar*.

There is not much difficulty in thus forming adjectives; but the purposes of natural history require that we should have *substantives* corresponding to these adjectives; and these cannot be obtained without some extension of the analogies of our language. We cannot in general use adjectives or participles as singular *substantives*. The Haggis or the Doomed world, according to good English usage, signify those who are haggis and those who are doomed in the plural. Hence we could not speak of a particular scaled animal as *The Squamale*, and still less could we call any such animal *A Squamale*, or speak of Squamales in the plural. Some of the forms of our adjectives, however, do admit of this substantive use. Thus we talk of Europeans, Plebeians, Republicans; of Divines and Masculines; of the Ultramontanes; of Merchants and Brilliants; of Abstragents and Emulcents; of Mercenaries and Tributaries; of Animals, Manuals, and Officials; of Dissuaders and Motives. We cannot generally use in this way adjectives in 'ous', nor in 'ate' (though Reprobates is an exception), nor English participles, nor adjectives in which there is no termination imitating the Latin, as Happy, Good. Hence, if we have, for purposes of science, to convert adjectives into *substantives*, we ought to follow the form of examples like these, in which it has already appeared in fact, that such usage, though an innovation at first, may ultimately become a received part of the language.—*Whewell, Novum Organum Renovatum*.

Substantiveness. s. Attribute suggested by Substantive.

H. Newman, Essay on Development of Christian Doctrine*, ch. l. § 1.

Succession. s. [Fr.; Lat. *successio*, -onis.]

1. Consecution; series of one thing or person following another.

St. Augustine, having reckoned up a great number of the bishops of Rome, saith in all this order of succession of bishops there is not one found a Donatist.—*Hosker, Ecclesiastical Polity.*

Reflection on appearances of several ideas, one after another, in our minds, furnishes us with the idea of succession.—*Locke.*

Let a cannon bullet pass through a room, and take with it any kind of a man, it is clear that it must strike successively the two sides of the room, touch one part of the flesh first, and another after, and so in succession.—*Id.*

Of all truths relating to phenomena, the most valuable to us are those which relate to the order of their succession. On a knowledge of these is founded every reasonable anticipation of future facts, and whatever power we possess of influencing those facts to our advantage. . . . Though the laws of number and space are important elements in the ascertainment of uniformities of succession, they can do nothing towards it when taken by themselves. They can only be made instrumental to that purpose when we combine with them additional premises, expressive of uniformities of succession already known. By taking, for instance, as premises these propositions, that bodies acted upon by an instantaneous force move with uniform velocity in straight lines; that bodies acted upon by a continuous force move with accelerated velocity in straight lines; and that bodies acted upon by two forces in different directions move in the diagonal of a parallelogram, whose sides represent the direction and quantity of those forces; we may by combining these truths with propositions relating to the properties of straight lines and of parallelograms, (as that a triangle is half of a parallelogram of the same base and altitude,) deduce another important uniformity of succession, viz. that a body moving round a centre of force describes areas proportional to the times. But unless there had been laws of succession in our premises, there could have been no truths of succession in our conclusions. A similar remark might be extended to every other class of phenomena really peculiar; and, had it been attended to, would have prevented many chimerical attempts at demonstrations of the indemonstrable, and explanations which do not explain.—*J. S. Mill, System of Logic, b. iii. ch. v. § 1.*

How do we determine objective change? This means, how do we distinguish between co-existence and succession, since in apprehension all our representations are successive? Simply by regarding the indifference in order of succession of two states in one case, and the persistence in the order of succession in another case.—*Inglis, An Introduction to Metaphysics, § 130.*

2. Series of things or persons following one another.

These decays in Spain have been occasioned by so long a war with Holland; but most by two successions of inactive princes.—*Bayle.*

The smallest particles of matter may cohere by the strongest attractions, and compose bigger particles of weaker virtue; and many of these may cohere and compose bigger particles, whose virtue is still weaker; and so on for divers successions, until the progression end in the biggest particles, on which the operations in chymistry and the colours of natural bodies depend.—*Sir I. Newton, On Opticks.*

- Successional. adj.** Following in, making good, a succession.

In the preceding account I have used the term 'permanence' for those teeth which remain in use throughout the animal's life or, if they fall out (as do the rudimentary canines and the premolars of the Macropodidae), do not give place to successional teeth; and I have therefore assumed that the milk or temporary dentition of the typical diphyodont mammals is represented in the macropodids only by the deciduous molars. It may be held, on the other hand, that the large majority of the teeth of the Macropodids are the homologues of the milk or first teeth of the diphyodonts, and that it is the permanent or second dentition which is so feebly represented by the four successional premolars.—*W. H. Flower, On the Development and Succession of Teeth in the Macropodidae, Proceedings of the Royal Society, May 9, 1907.*

- Successive. adj.**

Nevertheless these changes seem hitherto to have produced no discontent; whether it were that a people neither commercial nor enlightened did not readily perceive their impolicy; or, as has been ingeniously conjectured, that these successive diminutions of the standard are nearly counterbalanced by an augmentation in the value of silver, occasioned by the drain of money.—*Id. pt. ii. ch. ii.*

2. Inherited by succession. *Rare.*

places than one.—*Hendley, Sermons*.

We have a tradition coming down to us from our
fathers; a kind of inheritance *successively* conveyed
to us by the primitive saints from the apostles them-
selves.—*Bishop Waterland*.

Successiveness. *s.* Attribute suggested by
Successive; state of being successive.

All the motion we have of duration is partly by
the *successiveness* of its own operations, and partly
by those external measures that it finds in motion.
—*Sir M. Hale*.

This perpetual and latent kind of memory may
be termed a sense of *successiveness*; and must be
considered as an internal sense by which we perceive
ourselves existing in time, much in the same way as
by our external and muscular sense we perceive our-
selves existing in space. And both our internal
thoughts and feelings, and the events which take
place around us, are apprehended as objects of this
internal sense, and thus as taking place in time. . .
And thus, this sense of *successiveness*, like the mus-
cular sense with which we have compared it, implies
activity of the mind itself, and is not a sense pas-
sively receiving impressions.—*Whewell, History of
Scientific Ideas*, vol. i. p. 142: 1854.

Successless. *adj.* Wanting, deficient in,

Gentiles.—*Hammond, Works*, vol. iii. p. 181.

Successor. *s.* [Lat.; in the previous edi-
tions it is entered as *successor*, with the
remark that 'this is sometimes pronounced
successor, with the accent in the middle;'
evidently showing that the accent thrown
back was the accent favoured by Johnson.
It is certain that no one who said *successor*
could be charged with vulgarity; inasmuch
as the throwing back of the accent as far
as possible has always passed for a refine-
ment in language rather than ought else.
Perhaps, however, it is carried too far.
Confessor and *professor*, the words most
like the one under notice, are, beyond
doubt, sounded with the accent on the
second syllable, by a decided majority of
both the critical and the uncritical.] One

Succinic acid is obtained by distilling coarsely
pounded amber in a retort by itself, with a heat
gradually raised, or mixed with one-twelfth of its
weight of sulphuric acid, diluted with half its
weight of water. The acid which sublimates is to be
dissolved in hot water, to be saturated with potassa
or soda, boiled with bone-black, to remove the foul
empyreumatic oily matter, filtered, and precipitated
by nitrate of lead, to convert it into an insoluble
succinate; which being washed is to be decomposed

render them worthy of notice as esculents. The
most important in that way are Carduus . . . Ar-
chileuca . . . Scrophularia, and Salvia . . . Endive,
the blinched leaves of Clethrum Endivium; *Succory* . . .

anthus tuberosus. *Laudy, Vegetable Kingdom*.

To detect the adulteration, sprinkle the suspected
article upon the surface of some water in a jar or
tumbler: if genuine coffee, it remains for a li-
tle time 'floating, scarcely ti- at the water, and ap-
pearing grayish or red easily settled; whereas, if an-
other powder be present, it communicates a deep
reddish-brown tint to the water, and portions of it
soon sink to the bottom. *Brande and Cox, Dic-

Though seeming in shape a woman natural,
Was a kind of the kind that *succube* some call.

b. In Medicine.

Succussion of the trunk of the body was mentioned by Hippocrates in several parts of his works, and was employed by him to ascertain the presence of purulent and other fluids in the cavities of the chest. . . . Laennec first clearly demonstrated the conditions upon which the evidence furnished by *succussion* depends, and since his time this mode of investigating diseases of the chest has been resorted to whenever they have been supposed to have been attended by effusion of fluid into the thoracic cavity. It is chiefly in pneumothorax that *succussion* produces the sound of fluctuation in the pleural cavity, for it is necessary to the production of this sound that, along with the fluid, more or less air should also be present.—*Copland, Dictionary of Practical Medicine*.

For a bishop to have a coadjutor, or, as the statute calls him, a suffragan to assist him, was no new thing, but of ancient use in England before Henry the Eighth. . . . When I took the first survey of my undertaking, I found our speech copious without order, and energetic without rules; wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated; choice was to be made out of boundless variety, without any established principle of selection; adulterations were to be detected, without a settled test of purity; and modes of expression to be rejected or received, without the suffrage of any writers of classical reputation or acknowledged authority.—*Johnson, Preface to Dictionary.*

When the emperors had surrendered their pretensions to interfere in episcopal elections, the primitive mode of collecting the suffrage of clergy and laity in conjunction, or at least of the clergy with the laity's assent and ratification, ought naturally to have revived.—*Hollan, View of the State of Europe during the Middle Ages*, pt. i. ch. vii.

Crashaw. Saccharum candidum sheds into angular figures, by placing a great many sticks across a vessel of liquid sugar.—*Grew.*

2. In Chemistry. See extract.

Sugar . . . is the sweet constituent of vegetable and animal products. It may be distinguished into two principal species. The first, which occurs in the sugar-cane, the beet-root, and the maple, crystallizes in oblique four-sided prisms, terminated by two-sided summits; it has a sweetening power which may be represented by 100; and in circum-polarization it bends the luminous rays to the right. The second occurs ready formed in ripe grapes and other fruits; it is also produced by treating starch with diastase or sulphuric acid. This species forms cauliflower concretions, but not true crystal; it has a sweetening power which may be represented by 60; and in circum-polarization it bends the rays to the left. Besides these two principal kinds of sugar, some others are distinguished by chemists; as the sugar of milk, of manna, of certain mushrooms, of liquorice-root, and that obtained from sawdust and glue by the action of sulphuric acid; but they have no importance in a manufacturing point of view.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar of lead. See extract.

Sugar of lead, though made of that insipid metal and sour salt of vinegar, has in it a sweetness surpassing that of common sugar.—*Boyle.*

Sugar of lead, properly acetate of lead, is prepared by dissolving pure litharge with heat in strong vinegar, made of malt, wood, or wine, till the acid be saturated. . . . A main point in the preparation of sugar of lead is to use a strong acid; otherwise much time and acid are wasted in concentrating the solution. This salt crystallizes in colourless, transparent, four and six-sided prisms, from a moderately-concentrated solution; but from a stronger solution, in small needles, which have a yellow cast if the acid has been slightly impure.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar. *v. a.* Sweeten with sugar.

Bishop Hall, Satires, ll. 4. (Saves by H. and W.)

Sugar-cane. *s.* See extract from Lindley.

A piece of some germinated plant, seeming to be part of a sugar-cane.—*Woodward.*

There are several varieties of the sugar-cane plant. The first and longest known is the cane, or common sugar-cane, which was originally introduced at Madeira. It grows freely in every region within the tropics, on a moist soil, even at an elevation of 3000 feet above the level of the sea. In Mexico, among the mountains of Tlaxcala, it is cultivated to a height of more than 2000 feet. The quantity and quality of sugar which it yields is proportional to the heat of the place where it grows, provided it be not too moist and marshy.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar is a general product of grasses. *Gynurium saccharoides*, a Brazilian grass, derives its name from that circumstance. It exists in great quantity in the sugar-cane (*Saccharum officinale*). Maize so abounds in it that its cultivation has been proposed in lieu of the sugar-cane; and it is probable that the value of the other species for fodder depends upon the abundance of this secretion.—*Lindley, Vegetable Kingdom.*

Sugar-loaf. *s.* Conical mass of white sugar.

The next process in sugar-refining is the evaporation of the clarified syrup to the granulating or crystallizing pitch. The more rapidly this is effected, and with the less searching injury from fire, the better and greater is the product in sugar-loaves.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sugar-mill. *s.* Mill for squeezing sugar-canes.

The first machines employed to squeeze the canes were mills similar to those which serve to crush apples in some cider districts, or somewhat like tann-mills. In the centre of a circular area of about seven or eight feet in diameter, a vertical heavy wheel was made to revolve on its edge, by attaching a horse to a cross-beam projecting horizontally from it, and making it move in a circular path. The cane pieces were strewed on the somewhat concave bed in the path of the wheel, and the juice expressed flowed away through a channel or gutter in the lowest part. This machine was tedious and unproductive. It was replaced by the vertical cylinder mill of *Don-sales de Veloso*, which has continued till modern times with little variation of external form, but is now generally superseded by the *sugar-mill* with horizontal cylinders.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sugar-mould. s. Mould for making sugar into loaves.

The first care of the refiner should therefore be the immediate abstraction of those noxious alteratives, which he effects by the process called *mellings*; that is, mixing up the sugar in a pan with hot water of steam into a pap, and transferring this pap into large *sugar-moulds*.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sugar-plum. s. Sweetmeat so called.

If a child must have *sugar-plums* when he has a mind, rather than be out of humour, why, when he is grown up, must he be not satisfied too with wine.—*Locke*.

Sugar-refinery. s. Establishment for refining sugar.

There are three classes of *sugar-refineries* in the country.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Sugar-refining. verbal abs. Process by which the raw sugar, or sugar which, as usually imported, is not sufficiently pure for use, is purified.

In the ... description of *sugar-refining*, I have said nothing about the process of *claying the loaves*, because it is now nearly obsolete.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

tutes. By help of such confederacies, parties were

claimed, which the law itself could hardly be said to
discourage.—*Hallam, View of the State of Europe

Sulphur. *s.* [Lat.] In *Chemistry*. Elementary substance so called; the name, unlike the majority of similar ones, being destitute of any technical termination indicative of its character—e.g. *-um*, as in *sodium*, *potassium* (denoting a metal); *-ine*, as in *iodine*, *chlorine*; and *-en*, as in *hydrogen*, *nitrogen*. This suggests the likelihood of the characters of sulphur being negative rather than positive. What they are is best seen in the extracts. In the arts and in common language *brimstone* is an approximate synonym; it applies, however, chiefly to the element in its solid form. When reduced to a powder by sublimation it is called 'Flowers of sulphur' rather than 'Flowers of brimstone.' All the chemical terms, too, are derivatives of *sulphur*, and they are very numerous; *sulphuric*, *sulphurous*, *sulphate*, *sulphite*, *sulphide*, *sulphuret*, *sulphuretted*, &c.

In his wound was hid metallic ore, The work of sulphur. *Milton, Paradise Lost*, l. 674.

Sulphur is produced by incorporating an oily or bituminous matter with the fossil salt.—*Woodward.*

Berzelius has directed special attention to the fact that sulphur, although an element, is capable of existing in two or even three forms which are mechanically distinct, although chemically the same. We have *sulphur* in the two distinct crystalline forms above mentioned, and to these we may

1. the plastic form in which it is obtained by being thrown into cold water when at a high temperature. It also occurs in three liquid modifications when first melted at or a little above its point of fusion, the thick viscid state which occurs when it is further heated, and again the more fluid state which it assumes when heated nearly to its boiling point.—*Turner, Elements of Chemistry.*

Sulphur is a simple combustible, solid, non-metallic, of a peculiar yellow colour, very brittle, melting at the temperature of 220° Fahr., and possessing after it has been fused, a specific gravity of 1.98. When held in a warm hand, a roll of sulphur emits a crackling sound, by the fracture of its interior parts; and when it is rubbed, it emits a peculiar well-known smell, and acquires at the same time

negative electricity. When heated to the temperature of 360° Fahr. it takes fire, burns away with a dull blue flame of a suffocating odour, and leaves no residuum. When more strongly heated, sulphur burns with a vivid white flame. It is not affected by air or water.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sulphur-wort. *s.* Native umbelliferous herb (akin to the parsley, carrots, fennel, &c.) of the genus *Pentadactylon*.

Sulphur-wort [in] a genus of perennial, fetid, resinous, smooth herbs, with round, striated, branching, leafy, solid stems. Leaves repeatedly compound, with extremely narrow, acute, entire leaflets. Umbels large, concave, or flat, of numerous general and partial smooth rays; bracts several, rather small; flowers yellow; fruit first reddish, then of a tawny brown; there is some indigenous species, but it is not common, the sea sulphur-wort, or hog's fennel (*P. officinale*), which grows in salt marshes, flowering from July to September.—*C. W. Johnson, Farmer's Encyclopedia.*

Sulphurate. *adj.* Of or belonging to sulphur; having the colour of sulphur.

He interprets their breastplates of fire and of jacinth and brimstone, of the colour of their horsemen's coats, as if they were made of thread of either colour: 'de feu,' violet colour, or a pale sulphurate colour.—*Dr. H. More, Mystery of Godliness*, p. 189: 1680.

Sulphuring-rooms are sometimes conducted upon a great scale, in which blankets, shawls, and woollen clothes may be suspended freely upon poles and corbels.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Sulphureous. *adj.* Made of brimstone; having the qualities of brimstone; containing sulphur; impregnated with sulphur.

Sulphuric. *adj.* [The termination *-ic* is an artificial annex in *Chemistry*, indicating an acid and its nature.] With *acid*. Oil of vitriol.

Sulphuric acid, . . . the agent of many chemical operations, was formerly procured by the distillation of dried sulphate of iron, called green vitriol, whence the corrosive liquid which came over, having an oily consistence, was denominated oil of vitriol. This method has been superseded in Great Britain, France, and most other countries, by the combination of sulphur along with nitre, in large leaden chimneys.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Dryden, Aurengzebe, l. 1.

With up.

So lovely fair!
That what seem'd fair in all the world, seem'd now
Mean, or in her summ'd up, in her contain'd.
Milton, Paradise Lost, viii. 471.

To conclude, by summing up what I would say
concerning what I have, and what I have not been,
in the following paper I shall not deny that I pre-
tended not to write an accurate treatise of colours,
but an occasional essay.—*Boyle.*

Go to the wit, thou sluggard, in few words sum
up the moral of this fable.—*Nir N. L'Edraque.*
A fine sentence summ'd up among you!—*Dryden,
Spanish Friar, iv. 1.*

3. Have fathers full grown.

With prosperous wing full summ'd.
Milton, Paradise Regain'd, l. 14.

sumach. s. [?] See extracts.

In the common *sumach*, especially, the cellular or
inner part of each *suma* has precisely the same ap-
pearance as the pith, which is here of a peculiar
brown colour and easily recognised.—*Hendrie,
Principles of Descriptive and Physiological Bot-
any, pt. I. sect. I.*

Sumach is the powder of the leaves, peduncles,
and young branches of the Rhine coriaria, and Rhine
colinus, shrubs which grow in Hungary, the Banat,
and the Illyrian provinces. Both kinds contain
tannin, with a little yellow coloring-matter, and
are a good deal employed for tanning light-colored
leathers; but the first is the best. With mordants,
it gives nearly the same colours as gall. In calico-
printing, *sumach* affords, with a mordant of tin, a
yellow colour; with acetate of iron, weak or strong,
a gray or black, and, with sulphate of zinc, a brown-
ish-yellow.—*Ure, Dictionary of Arts, Manufactures,
and Mines.*

sumbul. s. [Tartar or Russian.] In *Phar-
macy*. Stimulant, of recent introduction,
so called.

This drug was introduced into Germany from
Russia about the year 1840; more recently it has
been brought under the notice of the medical pro-
fession in England. The botanical origin of *sumbul*
root is involved in obscurity; from a resemblance
which it bears to angelica, there is reason to think
it is afforded by some nearly allied umbelliferous
plant. It has been supposed a native of Persia; but
we think there is greater reason to conclude that it
is produced in some of the more remote regions of
Central Asia. Dr. Granville states that it is brought
into the Moscow drug market by way of Kharbita.—*Pereira, Elements of Materia Medica and Thera-
peutics.*

sumless. adj. Not to be computed.

summarily. adv. In a summary manner;

Scripture, and do summarily declare the things
which many ways have been spoken, be contented
quietly to hear, and do not think my speech tedious.

When the parties proceed summarily, and they
choose the ordinary way of proceeding, the cause is
made plenary.—*Agilf, Parvorum Juris Canonici.*

Directed them to mind their brief,
Nor spend their time to show their reading.
She'd have a summary proceeding.

process of tilting everything upon it into the fire-
place.—*Dickens, Martin Chuzzlewit, ch. xiii.*

summary. s. Compendium; abstract;
abridgement.

We are enforced from our most quiet sphere
By the rough torrent of occasion;
And have the summary of all our griefs,
When time shall serve, to show in action.
Shakespeare, Henry IV. Part II. iv. 1.

In that comprehensive summary of our duty to
God, there is no express mention thereof.—*Rogers.*

The summary of Charles of Valois' expedition into
Italy, the expedition of the lieutenant and peace-
maker of the pope, was contained in that sarcastic
sentence alluded to above, 'In came to establish
peace in Tuscany, and left war; he went to Sicily to
wage war, and made a disagreeable peace.'—*Milman,
History of Latin Christianity, h. xi. ch. ix.*

One work written by him [Robert White] has
been printed, a summary of theology, under the
then common title of The Book of Sentences, which
has the reputation of being distinguished by the
superior correctness of its style and the lucidness of
its method.—*Craik, History of English Literature,
vol. I. p. 18.*

Literature, and Art.*

mule* = the bearer; disconnected by Wedg-
wood from Lat. *trahs summarius*; Italian,
trave sommaria = chief beam, the ordinary
etymology.] Principal beam of a floor.

better trusted in cross and transverse works for
summers, or girders, or binding beams.—*Sir J.
Watts.*

dew,

The inward walk and *summer* cleft and tore;
But guard shored these, and cut that as it grew.
G. Herbert.

their eyes.—*Shakespeare, Henry V. v. 2.*

I'd rather live
With cheese and garlick, in a windmill, far,
Than feed on oxen, and have him talk to me,
In any *summerhouse* in Christendom.

Shakespeare, Henry IV. Part I. iii. 1.

With here a fountain, never to be play'd,
And there a *summerhouse*, that known no shade,
Pope, Moral Essays, iv. 121.

There lags much virtue in eight volumes of Spec-
tators, such a reverence of things sacred, so many
valuable remarks for our conduct in life, that they
are not improper to lie in parlours or *summerhouses*,
to entertain our thoughts in any moments of leisure.
—*Watts.*

summering. s.

His (a ruffian's) sovereignty is shown highest at
May-mass, wakes, *summerings*, and rush-bearings;
where it is twentie to one but he becomes benefi-
cial, before he part, to the lord of the manour, by
remission of a bloody now or a broken pate.—*Cliffs
Whimzies*. (Nares by H. and W.)

2. Early apple so called.

of the Church of Rome.*

summit. s. Top; utmost height.

Have I fall'n or no?
From the dread *summit* of this clauky bourn!

Cannot be seen or heard.

Enriches all the vales below.

summit. s. [Lat. *summitas*.]

1. Height or top of anything.

This quarrel began about a small spot of ground

please to remove themselves and their effects down
to the lower *summit*.—*Swift, Battle of the Books.*

Rely on what thou hast of virtue, *summon* all.

Milton, Paradise Lost, ix. 574.

Nor trumpet *summon* him to war,
Nor drums disturb his morning sleep.

Dryden, Translation from Horace, epode ii.

It is not easy to determine how long the interior
tenants in chief continued to sit personally in parlia-
ment. In the charters of Henry III., the clause
which we have been considering is omitted; and I
think there is no express proof remaining, that the
sheriff was ever directed to *summon* the king's
military tenants within his county, in the manner
which the charter of John required. It appears,
however, that they were in fact members of parlia-
ment on many occasions during Henry's reign,
which shows that they were *summoned* either by
particular writs, or through the sheriff; and the
latter is the more plausible conjecture.—*Maitland,
View of the State of Europe during the Middle
Ages, pt. iii. ch. viii.*

2. Excite; call up; raise; (with *up* em-
phatic).

When the blast of war blows in our ears,

has nothing to do with the name of the
season. See under Spring.

What are you?
Your name, your quality, and why you answer.
This present *summons*!

pardon; but neither *summons* nor pardon was any
thing regarded.—*Sir J. Heyward.*

The sun of light

Hasted, resorting to the *summons* high,
And took their seats. *Milton, Paradise Lost, xi. 81.*

This *summons*, as he resolve—, unfit either to
dispute or disobey, so could he not, without much
violence to his inclinations, submit unto.—*Bishop
Felt, Life of Hammond.*

Strike your sails at *summons*, or prepare

To prove the last extremity of war.

Dryden, Cymon and Iphigenia, 20.

But from the beginning of Edward III.'s reign, it seems that the council and the lords' house in parliament were often blended together into one assembly. This was denominated the great council, being the lords spiritual and temporal, with the king's ordinary council annexed to them, as a council within a council. And even in much earlier times, the lords, as hereditary councillors, were, either whenever they thought fit to attend, or on special summonses by the king (it is hard to say which), assistant members of this council, both for advice and for jurisdiction.—*Maitland, View of the State of Europe during the Middle Ages*, pt. iii. ch. viii.

sumpter. *s.* [Italian, *somaro*; Fr. *sommier*; Lat. (from Gr.) *sagma* = load.] Horse that carries the clothes or furniture.

Hilarius hastily summoned a council of bishops and pronounced sentence of deposition against Celibolus. On the intelligence that Celibolus had gone to Rome to appeal against this decree, Hilarius set forth, it is said, on foot, across the Alps, and travelled without horse or *sumpter mule* to the Great City.—*Milman, History of Latin Christianity*, b. ii. ch. iv.

sumption. *s.* Act of taking. *Obsolete*.

The *sumption* of the mysteries does all in a capable subject.—*J. J. Taylor*.

sumptuary. *adj.* Relating to expence; regulating the cost of life.

To remove that material cause of sedition, which is want and poverty in the estate, serveth the opening and well-balancing of trade, the banishing of idleness, the repressing of waste and excess by *sumptuary laws*.—*Bacon*.

Whether allowable to ruin oneself? The political economist replies that it is! . . . Political economists therefore tell us, that any regulations would be ridiculous which, as Lord Bacon expresses it, should serve for 'the repressing of waste and excess by *sumptuary laws*. Adam Smith is not only indignant at '*sumptuary laws*,' but asserts . . . that 'it is the highest impertinence and presumption in kings and ministers to pretend to watch over the economy of private people, and to restrain their expense by *sumptuary laws*.' *Sumptuary laws*, so often enacted, and so often repealed, and always eluded, were the perpetual, but ineffectual attempts of all governments to restrain what, perhaps, cannot be restrained—criminal folly! And to punish a man for having ruined himself would usually be to punish a most contrite penitent! It is not surprising that before 'private vices' were considered as 'public benefits,' the governors of nations instituted *sumptuary laws*—for the passion for pageantry, and an incredible profligacy in dress were continually impoverishing great families.—*J. Barrow, Characteristics of Literature, Whether Allowable to Ruin Ourselves?*

sumptuousness. *s.* Expensiveness; costliness. *(Obsolete)*.

He added *sumptuousness*, invented jewels of gold and stone, and some engines for the war.—*Sir W. Raleigh*.

We see how most Christians stood then affected, how joyful they were to inhabit the *sumptuous* state-house of houses built unto God's glory.—*Hooker, Ecclesiastical Polity*.

We are too magnificent and *sumptuous* in our tables and attendances.—*Bishop Atterbury*.

sumptuously. *adv.* In a sumptuous manner.

Shakespeare, Much Ado about Nothing, iii. 1.
Though there be but one *sun* existing in the world, yet the idea of it being abstracted, so that more substances might each agree in it, it is as much a sort as if there were as many *sun*s as there are stars.—*Locke*.

All in a hot and copper sky
The bloody *sun* at noon,
Right up above the mast did stand,
No bigger than the moon.

Coleridge, Ancient Mariner.

Slow sinks, more lovely ere his race be run,
Along Morca's hills the setting *sun*:

Fame, wisdom, love, and power were mine,
And health and youth possessed me;

And felt my soul grow tender;
All earth can give, or mortal prize,
Was mine of regal splendour.

Byron, Hebrew Melodies.

There was no blood upon her maiden robes
Sun'd by those orient skies;

Wisdom, a name to shake

All evil dreams of power. *Tennyson, The Poet*.

Sunbow. *s.* Iris differing from the rainbow in being formed by the water which refracts the rays of the sun arising from water in its ascent; i.e. from cataracts, mists, &c., rather than its descent, as in rain.

It is not moon—the *sunbow's* rays still arch
The torrent with the many lines of bowen,
And roll the sheeted silver's waving column
O'er the crag's headlong perpendicular,
And fling its lines of flaming light along,
And to and fro, like the pale courier's tail,
The giant stee'd, to be betrod by Death,
As told in the Apocalypse.

The iris is formed by the rays of the sun over the lower part of the Algor torrents; it is exactly like a rainbow come down to pay a visit, and so close that you may walk into it; this effect lasts till noon. Before ascending the mountain, went to the torrent; the sun upon it forming a rainbow of the lower part of all colours, but principally purple and gold, the bow moving as you move, I never saw anything like this; it is only in the sunshine.—*Byron, Manfred*, ii. 2, and note.

The smoke and the jar of the battle stain the clear air with *sunbows*.—*Shelley, A Vision of the Sea*.

Sunbright. *adj.* Resembling the sun in brightness.

He *wholly sunder'd* from the rest, to yell
In forests. *Id., The Pythagorean Philosophy.*
Bring me the lightning, give me thunder; . . .
Jove may kill, but never shall *sunder*. *Granville.*

Sunder. Entered in the previous editions as a substantive. Unless, however, we look upon it as the singular form of *sundries* (which is better connected with *sundry*), it is difficult to treat it as such. In *sunder*, the construction is that of *in two*, as 'He broke it in *two*,' or 'in *tenia*;' and the same is the case with *a-sunder*. Hence, it is an element in an adverbial combination, rather than either a noun or an adverb. *Sundries*: *sundry things*, is a substantive in the way that *black*: *black men*, is one: i.e. a substantive of adjectival origin, but substantival inasmuch as it takes a plural form.

He breaketh the bow, and cutteth the spear in *sunder*.—*Paulus*, xlv. 9.

Sundew. *s.* In *Botany*. Native plant of the genus *Drosera*.

Sundew.—This is a most singular and beautiful genus of plants, whose leaves are ornamented with red glandular hairs, discharging from their ends a drop of viscid acrid juice, which, from its resemblance to dew, has given rise to the common and generic name. These hairs are so irritable as to contract when touched, imprisoning insects, after the manner of *Dionaea muscipula*. In their native state they are found growing on mossy turf bogs. They are all increased by seeds, which should be allowed to sow themselves. There are three indigenous species, all perennials. The leaves are either undivided or lobed, entire; flowers terminal, racemose, rarely solitary; petals red or white.—*G. W. Johnson, Farmer's Cyclopaedia.*

Sundial. *s.* Marked plate on which the shadow points the hour.

All your grace no more shall you have,
Than a *sundial* in a grave. *Donne.*

Dryden, Translation of the Georgics, l. 261.

Sunfish. *s.* In *Ichthyology*. Fish of the genus *Orthogoriscus*.

The *sun-fish*, as this species has been called, from the two-fold circumstance of its circular form and shining surface, though occurring but occasionally,

may be said to have been taken from John O'Grat's to the Land's End. . . . Mr. Couch says the short-*sun-fish* is migratory, keeping probably at the bottom, and feeding on seaweeds in its ordinary habits; but in calm weather it ascends to the surface, and lies, perhaps asleep, with its head, and even its eyes, above the water, floating with the tide. Mr. Couch has known the *sun-fish* make powerful but awkward efforts to escape when attacked, bending and directing its motions in various ways.—*Farrall, History of British Fishes.*

Sunflower. *s.* In *Botany*. Plant of the genus *Helianthemum*.

The *sunflower* . . . appears to possess far more profitable qualities than were hitherto supposed, and, besides forming a beautiful object in a bed of flowers, it may be cultivated with advantage, and applied to many useful purposes. An acre of land will contain 25,000 *sunflower* plants, at twelve inches distant from each other. The produce will be according to the nature of the soil and mode of cultivation; but the average has been found to be fifty bushels of oil. The oil is excellent for table use, burning in lamps, and for the manufacture of soaps. The marc or refuse of the seeds, after the oil has been expressed, made into cake, will produce 1,500 lbs., and the stalks, when burnt for alkali, will give 10 per cent. of potash. The green leaves of the *sunflower*, when dried and burnt to powder, make excellent fodder for milch cows, mixed with bran.—*C. W. Johnson, Farmer's Cyclopaedia.*

Heavily hangs the broad *sunflower*,
Over its grave in the earth so chilly;
Heavily hangs the hollyhock,
Heavily hangs the tiger-lily. *Tennyson.*

Woman in the lower man, and all thy passions
united with mine,
Are as moonlight unto *sunlight*, and as water unto
wine. *Tennyson, Locksley Hall.*

Doubtless it is all crude enough; all illuminated
by an impure barbaric splendour; not the soft
peaceful brightness of *sunlight*, but the red resplendent
glare of playhouse torches.—*Carlyle, Critical and Miscellaneous Essays, Writings of Werner.*

Sunlike. *adj.* Resembling the sun.

She came, as if Aurora's faire
Out of the East had newly made repairs,

The quantity of light in this bright luminary,
and in the *sunlike* stars, must be continually
decreasing.—*Chapman.*

Perpetual flames, whose unresisted force

Running through all this bewilderment, a deeper
insight detects not only a vein of the most exuberant
wit, but often the *sunniest* and most delicate
fancy, and the truest tenderness and depth of feeling.—*Craik, History of English Literature*, vol. 1, p. 552.

Our friend was quite silent excepting a grunt occasionally, and stuck constantly to his work; when he heard a step near, and looking up, saw a young gentleman approaching the grave, whose light step, *sunny* face, and bright eye, contrasted very strikingly with the place.—*Lawney, Singleton Pontenoy.*

Her blooming meadows and her *sunny* shores,
With all the gifts that heaven and earth impart,
The smiles of nature, and the charms of art,
While proud oppression in her valleys reigns,
And tyranny usurps her happy plains?

Sunpan. *s.* Evaporating pan for preparing clay for pottery.

The discovery of the use of pounded flint for the
body of earthenware, in 1730, above-mentioned, was
the cause of great improvements in its manufac-
ture. There was a considerable demand for the
ware formed of the Devonshire (Hildesford) clay and
flint, between 1730 and 1740. About this time the
sun-pan, or tanks in which the clay was left to be-
come fit for use, were superseded by the use of the
slip-kiln, in which the clays were baked or sun-
dried.—*Catalogue of Specimens, Hyde Park Archi-

Sunstroke. *s.* In Medicine. See extract: (coup-de-sol, French for stroke-of-the-sun, often used, unnecessarily, instead).

Sunstroke [is] a sudden seizure of vertigo, with intense headache, constriction or oppression in the thorax, flushed or livid countenance and vomiting, followed by almost instant death; or by lethargy, sopor, or coma, or convulsions, caused by exposure to the sun's rays, or to a very high temperature. These effects of a powerful sun have been noticed from the earliest periods of history. Two instances of this sudden seizure are related in the Bible, and have been quoted by Sir Ronald Martin. . . . 'Sunstroke.'—And Manasse was her husband, of her tribe and kindred, who died in the barley harvest. For as he stood overseeing them, and bound sheaves in the field, the heat came upon his head, and he fell on his bed, and died in the city of Bethulia. (Judith, viii. 3.) . . . 'And when the child was grown, it fell on a day, that he went out to his father to the reapers. And he said unto his father, My head, my head; and he said to a lad, Carry him to his mother. And when he had taken and brought him to his mother, he sat on her knee till noon, and then he died.' (2 Kings, iv. 18-21.) Sunstroke was frequently fatal amongst the crusaders, not only in Syria and Palestine, but also in the countries through which they passed. It has always been one of the chief causes of the mortality, especially in modern times, in armies during hot seasons, and in warm countries, their dress, &c., especially in the English armies, favouring the injurious effects of exposure.—*Copland, Dictionary of Practical Medicine.*

4. In *Logic*. See extract.

In [a] popular sense any two classes, one of which includes the whole of the other and more, may be called a genus and a species. Such, for instance, are animal and man; man and mathematician.

Animal is a genus; man and brute are two species; or we may divide it into a greater number of species, as man, horse, dog, &c. Biped, or two-footed animal, may also be considered a genus, of which man and bird are two species. Taste is a genus, of which sweet taste, sour taste, salt taste, &c. are species. Virtue is a genus; justice, prudence, courage, fortitude, generosity, &c. are its species. The same class which is a genus with reference to the sub-classes or species included in it, may be itself a species with reference to a more comprehensive, or, as it is often called, a *superior* genus. Man is a species with reference to animal, but a genus with reference to the species mathematician. Animal is a genus, divided into two species, man and brute; but animal is also a species, which, with another species, vegetable, makes up the genus, organized being. Biped is a genus with reference to man and bird; but a species with respect to the *superior* genus, animal. Taste is a genus divided into species, but also a species of the genus sensation. Virtue is a genus with reference to justice, temperance, &c. one of the species of the genus, mental quality.—*J. S. Mill, System of Logic.*

Two assemblies (placets) were annually held. In the first, all regulations of importance to the public weal for the ensuing year were enacted; and to this, he says, the whole body of clergy and laity repaired; the greater to deliberate upon what was fitting to be done; and the less to confirm by their voluntary assent, not through deference to power, or sometimes even to discuss, the revolutionary *superiors*.—*Hallam, View of the State of Europe during the Middle Ages*, pt. II. ch. ii.

Cromwell thinks St. Boniface the centre of the world, and his position as president the highest in England. . . . Superiority. *s.* Condition of that which is superior; quality of being greater, or higher, than another in any respect; pre-eminence.

The best servant I can find of all the refinements of this new science of potation, when it seems to have reached its height, is in our Tom Nash, who being himself one of these deep experimental philosophers, is likely to disclose all the mystery of the craft. He says, 'Now he is nobody that cannot drink *superlunulum*; ensure the hunter's leopard; quaff away, fierce cranes; with leucis, quercus, juniper, fraxinus, and a thousand such doubtless inventions.' Drinking *superlunulum*, that is, 'on the nail' is a device, which Nash says is now come out of France; but it had probably a northern origin, for far northward it still exists. ... The custom is also alluded to by Bishop Hall, in his satirical sermon of 'Mundus alter et idem.' 'A Discourse of a New World,' a work which probably Swift read, and did not forget. The Duke of Tentobles, in his oration, when he drinks off his large goblet of twelve quarts on his election, exclaims, should he be false to their laws, 'Let never the goodly-faceted goblet of wine so joyfully through me; and then he set it to his mouth, slide it off every drop, save a little remainder, which he was by custom to set upon his thumb's nail, and lick it off as he did. The phrase is in Fletcher:—
I saw thine and unguine—
that is, he would drink with his friend to the last. In a manuscript letter of the times, I find an account of Columbus the Spanish adventurer being at Oxford, and drinking healths to the Infanta. The writer adds, 'I shall not tell you how our doctors judged healths to the Infanta and Columbus would cry, and if any left too big a snuff, Columbus would cry, *superlunulum*, *superlunulum*!' This Bacchic frolic seems still preserved, for a recent traveller, Sir George Mackenzie, has noticed the custom in his Travels through Iceland.—*J. Daniel, Curiosities of Literature, Drinking Customs in England.*

Sarient. s. [?] In Zoology. Animal of the genus Cercoleptes.

The sentiments of M. Fred. Cuvier on the situation of this curious animal, called by him the *sariente*, are in unison with those of Erastus. He considers it as intermediate between the genuine carnivora and the plantigrades: the teeth are more tuberculous than those of Herpestes, and less so than those of Nasua. It has the feet the number of toes excepted—of the latter genus; but the sole is entirely bare as in Nasua, which it further resembles in its prolonged muzzle, while the tongue partakes of the characters of both these genera. In size, this animal is rather less than a rabbit; but its long legs and general form, as represented by M. Fred. Cuvier, reminds us much more of a little sharp-nosed dog than of a weasel: when disconcerted, its voice resembles the barking of a puppy. It must be remarked, however, that the resemblance to the dog, after all, is but slight, for the *sariente* has only four toes to the feet, and is provided with an anal pouch; that it will stand on its hind legs only, and feed with its paws; and that in walking the entire sole of the foot is placed upon the ground.—*Savignin, Natural History, Classification of Quadrupeds, § 161.*

Surname. s. [Fr. surnom.]

1. Name of the family; name which one has over and above the Christian name.

Many which are mere English joined with the Irish against the king, taking on their Irish habits and customs, which could never since be clean wiped away; of which sort be most of the *surnames* that end in 'an,' as Heron, Shinn, and Mungai, which now account themselves natural Irish.—*Spenser, View of the State of Ireland.*

He made heir not only of his brother's kingdom, but of his virtues and haughty thoughts, and of the *surname* also of Barbarossa, began to aspire to the empire.—*Kaulla, History of the Turks.*

The epithets of great men, Monsieur Boileau is of opinion, were in the nature of *surnames*, and repeated as such.—*Pope.*

It is a great dispute whether we should write *surname* or *surnam*: on the one hand, there are a thousand instances in court-rolls, and other ancient monuments, where the description of the person, 'le Smyth,' 'le Tayleur,' &c. is written over the Christian name of the person, this only being inserted in the line; and the French always write *surnom*. And certainly *surnam* must be the truth, in regard of the patriarch or first person that bore the name. However, there is no impropriety, at this time of day, to say *surname*, since these additions are so apparently taken from our *surnames* or fathers. Thus the matter seems to be left to people's option.—*Pope, Anonymiana, or Ten Centuries of Observations, iii. 32.*

There still, however, wanted something to sweeten gentility of blood, where it was not marked by the actual tenure of land. This was supplied by two innovations devised in the eleventh and twelfth centuries; the adoption of *surnames* and of armorial bearings. The first are commonly referred to the former age, when the nobility began to add the names of their estates to their own, or, having any way acquired a distinctive appellation, transmitted it to their posterity. . . . The authors of the Nouveau Traité de Diplomatique trace the use of *surnames* to a few instances even to the beginning of the tenth century; but they did not become general, according to them, till the thirteenth. M. General finds a few hereditary *surnames* in the eleventh century, and many that were personal. The latter are not *surnames* at all, in our usual sense. A good many may be found in Domesday, as that of Brunet in Leicestershire, Malet in Suffolk, Corbet in Shropshire, Colville in Yorkshire, besides those with 'de,' which of course is a local designation, but became hereditary.—*Mullan, View of the State of Europe during the Middle Ages, pt. ii. ch. ii. and note.*

2. Appellation added to the original name.

Witness may

Shed for my thankless country, are required . . .
But with that *surname*.

dressed in gorgeous liveries of scarlet and golden
lace.—*Macaulay, History of England, ch. xxiii.*

had it hung loose, and was therefore gathered about
the middle with a girdle.—*Addison.*

Well, then there's the parson, Doctor Chryso-
stom. He's a gentleman at any rate. At this Mrs.
Ponch looked at Miss Wirt. . . . 'I hope there's
nothing wrong?' 'Wrong?' says Mrs. P., clasping
her hands with a tragic air. 'Oh!' says Miss Wirt,
and the two girls, gasping in chorus. 'Well,' says
I, 'I'm very sorry for it. I never saw a neer-look-
ing gentleman, or a better school, or heard a
better sermon.' 'He used to preach those sermons
in a surplice,' hissed out Mrs. Ponch. 'He's a
Puseyite, Mr. Snob.' 'Heavenly Powers,' says I,
admiring the pure ardour of these female theo-
logians.—*Thackeray, Book of Snobs, ch. xvii.*

Whatever degree of ascent one affords a pro-

position beyond the degree of evidence, it is plain
all that surplusage of assurance is owing not to the
love of truth.—*Locke.*

'Under an easy landlord,' said Audley, 'a tenant
seldom thrives; contenting himself to make the
just measure of his rents, and not labouring for any
surplusage of estate. Under a hard one, the tenant
revenge himself upon the land, and runs away with
the rent. I would raise my rents to the present
price of all commodities; for if we should let our
lands, as other men have done before us, now other
wares daily go on in price, we should fall backward
in our estates.' These axioms of political economy
were discoveries in his day.—*F. Dimsell, Curiousities*
of Literature, The Owners of the Seventeenth Cen-
tury.

The document is one half platitudes, and the other
half surplusage.—*Saturday Review, August 22, 1853,*

Surrebutter. *s.* In Pleading. See extract
under Surrejoinder.

Surrejoinder. *s.* In Pleading. Answer on the
part of the defendant to the replication of
the plaintiff; Surrebutter being another.

When the defendant admits all or a part of the
plaintiff's facts, but relies on certain other facts as

exonerating him from the liability asserted by the
plaintiff, he ought to state those facts in answer;
for instance, in order to answer the claim of a debt,
that it is barred by length of time, or that the de-
fendant has a set-off to allege against it: this is
termed a plea by way of confession and avoidance.
To this the plaintiff may reply in his second state-
ment, called a replication, either by denying the
defendant's facts, i. e. a replication by way of tra-
averse, or by alleging fresh ones; the defendant may
deny these, or again allege fresh ones, in his re-
joinder; sometimes a surrejoinder, a rebuttal, and
a surrebuttal may be added; and the edifice of
pleading is raised by stories gradually narrowing, by
the exclusion of superfluous facts, until it reaches
its summit in the production of one or more defi-
nite issues, either in law or fact, the decision of
which finally arranges the dispute.—*Brande and*
Cox, Dictionary of Science, Literature, and Art.

Surveillance. [N.Fr.] Superintendence; watching over anything.

As the eyes alluded to some particular displeasure which had been exhibited by De Valence on a late trivial occasion, his uncle's knowledge of this, and other minute, seemed to confirm his idea that his own conduct was watched in a manner which he did not feel honourable to himself, or dignified on the part of his relative; in a word, he conceived himself exposed to that sort of *surveillance* of which, in all ages, the young have accused the old.—*Sir W. 2. Superintendence.

3. Mensuration.

In the reign of William Rufus, and down to that of Henry II., when the trial of writs of right by the grand assize was introduced, Hoken has discovered of other instances of the original usage. The language of *houesday Book* lends some contribution to its existence at the time of that *survey*; and even our common local expression of trial by the country seems to be derived from a period when the form was literally popular.—*Hollom, View of the State of Europe during the Middle Ages*, pt. i. ch. viii.

Survival. s. Survivorship.

Survival. s. Survival: (Survivorship

the commonest word of the three).

Sir Thomas More and our best chroniclers make it doubtful whether these two princes were so lost in king Richard's time, or no; and infer that one of them was thought to be living many years after his death: that might be enough to acquit him: which opinion I like the better, because it mentions the *survival* of but one of them.—*Sir G. Buck, History of Richard III.*, p. 87: 1644.

Susceptive. *adj.* Capable to admit.

The limiter of this *susceptive* power unto the matter, in such differing degrees, and measures, and manners, can be none other but only that Omnipotent Creator of this matter.—*Fotherby, Athanasius*, p. 181; 1822.

Our plea was, that we had neither a decisive voice to determine with them; nor a deliberative voice to consult with them; nor an elective voice in choice of their persons, to make them our trustees to determine for us; nor lastly, as at least we should have, a *susceptive* voice, in a body of our own to receive their resolutions, and of ourselves to submit unto them.—*Sir R. Dering, Speeches*, p. 91.

Since our nature is so *susceptive* of errors on all sides, it is fit we should have nothing given us how far other persons may become the causes of false judgments.—*Watts, Logic*.

There is always a great show of the clergy at Bath; none of your thin, puny, yellow, hectic figures, exhausted with asceticism and hard study, labouring under the 'mortal cruditum'; but great overgrown dignitaries and rector, with rubicund noses and gouty ankles, or broad bloated chests, dragging along great *swag-bellies*; the emblems of sloth and indolence.—*Smollett, Expedition of Humphrey Clinker*.

Muddlebrains can't command a single vote, said Mr. Jeremy. 'He is a political humbug, the greatest of all humbings; a man who *swaggers* about London clubs and consults solemnly about his influence, and in the country is a nonentity.'—*R. Dimsdale, High*, b. ii. ch. xi.

Swagger. v. a. Overbear with boasting or bluster.

Do not lie;
Were you both faithful, true distributors?
Lie, madam! what grief is it to see you turn swag-
gerer, and give your poor-minded rascally servants
the lie.—*Manservant, The Virgin Martyr, li. 1.*

Swaggering. *part. adj.* Moving, or speak-
ing, with a swagger.

Confidence, how weakly soever founded, hath
some effect upon the ignorant, who think there is
something more than ordinary in a swaggering man,
that talks of nothing but demonstration.—*Arch-
bishop Tillotson.*

He was very dirty and very jaunty; very bold and
very mean; very swaggering and very slinking;
very much like a man who might have been some-
thing better, and unspeakably like a man who de-
served to be something worse.—*Dickens, Martin
Chuzzlewit, ch. iv.*

Swagging. *verbal abs.* Swaying.

They are more apt, in swagging down, to pierce
their politics, than in the jaunt posture, and
carve the wall.—*Sir H. Wotton.*

It were a happy life
To be no better than a homely swain.
—*Shakespeare, Henry IV. Part III. li. 5.*

Let states, that aim at greatness, take heed how
their nobility and gentleness do multiply too fast.

peasant and base swain, driven out of heart, and in
effect but a gentleman's labourer.—*Bacon, Essays,
Of the true Greatness of Kingdoms and Estates.*

3. Pastoral youth.

Best swains! whose nymphs in every grace excel!
Best nymphs! whose swains those graces slug so

neatherds of pastoral poetry).

Till it be seen if yet my suit may thrive
With you fair (from dew-drop) all that's left
To represent Van Mordestyn's lost blood.—
'Tis said she is but backwardly inclined
To any of her swains.
—*H. Taylor, Philip van Artevelde, Part I. l. 1.*

Swainmote. *s.* [A.S. *mot* = moot, meeting.]
See extract.

Swainmote [is] a court touching matters of the
forest, kept by the charter of the forest thrice in the
year. This court of swainmote is an accident to a
forest, as the court of pie-powder is to a fair. The
swainmote is a court of freeholders within the
forest.—*Cowell.*

The court of *swainmote* is to be held before the
verderers, as judges, by the steward of *swainmote*
thrice in every year, the *swains* or freeholders within
the forest composing the jury. The principal juris-
diction of this court is, first, to inquire into the op-
pression and grievances committed by the officers of
the forest; and, secondly, to resolve and try pro-
secutions certified from the court of attachments
against offences in vert and venison; and this court
may not only inquire, but convict also, which con-
viction shall be certified to the court of justice next
under the seal of the jury; for this court cannot
proceed to judgement.—*Sir W. Blackstone, Com-
mentary on the Laws of England, b. iii. ch. vi.*

The *swainmote*, as his name denotes, was revoc-
ed that forest-court which, till a late period, was known
in England as the *swainmoot*.—*Kemble, The Saxons
in England, b. ii. ch. v.*

As the first element in a compound.

mote-court*, &c.—*Huicell, Letters, iv. 16.*

than we your lordship.—*Shakespeare, Timon of
Athens, iii. 6.*

The *swallows* make use of eulandine, and the lin-
net of euphrasia.—*Dr. H. Mars.*

Take one handful of mother-thyme, of lavender-
cotton, and strawberry-leaves, of each alike; four
swallows, feathers and altogether, well bruised;
three ounces of salt-oil; beat the herbs and the
swallows, feathers and altogether, until they be so
small that you can see no feathers; then put in the
oil, and stir them well together, and with them in a
poultice, and strain them through a canvas cloth;
and so keep it for your use.—*Cook's Choice Manual; 1676.*

When *swallows* fleet near high and sport in air,
He told us that the welkin would be clear.

Gay, Shepherd's Week, Monday, 29.

This species [*swallow*] appears in Great Britain
nearly twenty days before the martin, or any other
of the *swallow* tribe. They leave us in the latter end
of September; and for a few days previous to their
departure, assemble in vast flocks on house-tops,
churches, and even trees, from whence they take
their flight. It is known that *swallows* fix their
winter quarters in Senegal, and possibly they may
be found about the whole African shore. We are
indebted to M. Adanson for this discovery, who
first observed them in the month of October, after
their migration from Europe, on the shores of that
kingdom; but whether it was this species above, or
all the European kind, he is silent. The name of
chimney *swallow* may almost be confined to Great
Britain; for in several other countries they choose
different places for their nests. In Sweden, they
prefer birch; so are styled there *Ladu-swallow*, or the
burn *swallow*; and in the hotter climates, they
make their nests in porches, gateways, galleries, and
open halls.—*Pennant, British Zoology, vol. i. pp.
561-2.*

The *swallow* is one of my favourite birds, and a
rival of the nightingale; for he cheers my sense of
seeing as much as the other does my sense of hear-
ing. He is the glad prophet of the year—the har-
binger of the season; he lives a life of enjoyment
amongst the lowliest forms of nature; winter is un-
known to him; and he leaves the green meadows of
England in autumn for the myrtle and
groves of Italy, and for the palms of Africa.—*Sir H.
Dargy, Salmonia.*

The *swallow* is a periodical visitor to this country;
and more records are preserved of its first appear-
ance every season than that of any other bird. The
average of many records and many seasons seems to
give the 10th of April as the mean period of its ar-
rival; and it remains more than six months in this
country, frequently on its return revisiting the pre-
cise locality it had inhabited for seasons before.
Swallows are occasionally seen earlier than the date
here mentioned, even in a backward spring, the mi-
gration being influenced by the temperature of the
country they proceed from.—*Farrell, British Birds;
vol. ii. p. 243.*

In Normandy, the *swallow* knows how to find
upon the sea-beach a pebble which has the mar-
vellous power of restoring sight to the blind. The peb-
bles tell of a certain way of obtaining possession of
this stone. You must put out the eye of a *swallow's*
young, whereupon the mother bird will immediately
go in quest of the stone. When she has found it
and applied it, she will endeavour to make away
with the talisman, that none may discover it. But
if one has taken the precaution to spread a piece of
scarlet cloth below the nest, the *swallow*, mistaking
it for fire, will drop the stone upon it.—*Baring
Gould, Various Myths of the Middle Ages, Second
Series, Schamir.*

Swallow. *v. a.* [A.S. *swelgan*.]

1. Take down the throat.

Little faults

Shall not be wink'd at, how shall we stretch our eye,
Whose capital crimes chew'd, swallow'd, and di-
gested.

Appear before us? *Shakespeare, Henry V. li. 2.*
Men are, at a venture, of the religion of the com-
try; and must therefore swallow down opinions, as
silly people do empiricks' pills, and have nothing to
do but believe that they will do the cure.—*Locke.*

The land tortoise has two enemies—man and
the sea tortoise.—Man... takes him home and
roasts him—and the sea tortoise *swallows* him
whole, shell and all, and consumes him slowly in the
interior; as the Court of Chancery does a great
estate.—*Snyder Smith, Review of Harton's Wan-
derings in South America.*

A young lady of the Sandwich Islands even now

will swallow half-a-drawn raw mackerel for break-
fast without the smallest inconvenience to herself;
and an Esquimaux will swallow a quantity of train
oil that would turn the stomachs of a dozen English
ploughmen.—*J. Cruesford, On the Civilization of
Man.*

2. Receive without examination.

Consider and judge of it as a matter of reason, and
not swallow it without examination as a matter
faith.—*Locke.*

3. Engrass; appropriate: (with up).

Far be it from me, that I should swallow up or
destroy.—*2 Samuel, xx. 20.*

Howers exceed all the inventors of other arts in
this, that he has swallowed up the honour of those
who succeeded him.—*Pope.*

4. Absorb; take in; sink in any abyss;
engulph.

Nature would allow

To be forced back again upon herself,
And like a whirlpool swallow her own streams.
—*Dryden and Lee, Oedipus, l. 1.*

With up.

Death is swallowed up in victory.—*1 Corinthians,
xv. 54.*

If the Lord make a new thing, and the earth open
her mouth and swallow them up, with all that ap-
pertain to them, and they so down quick into the
pit; then ye shall understand that these men have
perverted the Lord.—*Nahum, xvi. 30.*

Though you muffle the winds, and let them fight
Against the chubbs, though the yesty waves
Confound and swallow navigation up.

Shakespeare, Macbeth, iv. 1.

Misleads the amazed night-wanderer from his way
To bogs and mires, and oft through pond or pool,
There swallow'd up and lost.

My other cares, and draw them all into it?

Swallow implies, in all its figurative senses,
some misconceptions or contemptuous ideas, some-
thing of grossness or of folly.

Swallow. *s.*

1. Throat; voracity.

Had this man of merit and mortification been
called to account for his rugged *swallow*, in por-
ing down the estates of helpless widows and or-
phanes, he would have told them that it was all for
charitable uses.—*South, Sermons.*

2. Gulp; whirlpool.

Gurgles... Gouffres. A whirlpool, a gulf, or swal-
low.—*Nomenclator.*

Swallow-tail.

1. Species of willow so called. *Obsolète.*

The shining willow they call *swallow-tail*, because
of the pleasure of the leaf.—*Bacon, Natural and
Experimental History.*

2. Butterfly of the genus *Papilio*; see extract.

The *swallow-tail* butterfly is the largest of our
indigenous butterflies, the female being sometimes
found to measure upwards of three inches and a
half between the tips of the wings. ... Although
somewhat local in Britain, this species seems to be
pretty widely diffused through the southern parts
of England, and has been found as far north as
Beverly in Yorkshire. ... Numerous moths are on
record of this species having occurred in Britain,
but all of them have been found on strict investi-
gation, to be of so unsatisfactory a nature, as to leave
in some measure doubtful whether it is really
indigenous.—*J. Duncan, British Butterflies, in Na-
turalists' Library.*

3. Swallow-tailed coat.

But... you are safe in a swallow-tail.—*Lord
Lyttelton, Pelham.*

Swallow-tailed. *adj.* Having a forked tail.

a. Applied to birds.

The swallow-tailed kite, the *Falco furcatus* of
Linnaeus, is only an occasional visitor to this coun-
try. It is a native of the southern states of North
America, where it remains during summer, but is
observed in autumn going further south to pass the
winter.—*Farrell, History of British Birds.*

b. Applied to a coat with the bottom of the
tail somewhat forked.

Swallowers. *s.* One who, that which, swal-
lows.

I have often considered these different people with

very great attention, and always speak of them with the distinction of the esters, and *swallowers*. The esters sacrifice all their senses and understanding to this appetite; the *swallowers* hurry themselves out of both, without pleasing this or any other appetite at all. The latter are improved brutes, the former degenerated men.—*Taylor*, no. 503. (Ord 185.)

Swamp. s. [A.S. *swam* = mushroom, fungus, sponge.] Marsh; bog; fen.

Behold the duteous son, the sire decay'd,
The modest matron, and the blushing maid,
Forced from their homes, a melancholy train,
To traverse climes beyond the western main;
Where wild Oswego spreads her swamps around,
And Niagara stuns with thundering sound.

Eden was a hard school to learn so hard a lesson in;
but there were teachers in the swamp and thicket,
and the pædiential air, who had a warring
method of their own.—*Dickens*, *Martin Chuzzlewit*, ch. xxviii.

Swampy. adj. Boggy; fenny.

Swampy fens breathe destructive myriads.
Thomson.

Swan. s. [A.S.] In *Ornithology*. Bird of the genus *Anas*, Anser, or *Cygnus*.

With untainted eye
Compare her face with some that I shall show,
And I will make thee think thy swan a crow.
Shakespeare, *Romeo and Juliet*, 1. 2.

The fearful matrons raise a screaming cry,
Old feeble men with fainter groans reply;
A jarring sound results, and mingles in the sky,
Like that of *swans* remurmuring to the floods.

Dryden, *Translation of the Æneid*, 21. 602.
The idea, which an Englishman signifies by the name of *swan*, is a white colour, long neck, black beak, black legs, and whole feet, and all those of a certain size, with a power of swimming in the water, and making a certain kind of noise.—*Locks*.

No as they strayed, a *swan* they saw
Sail stately up and strong,
And by a silver chain she drew
A little boat along,
Whose streamer to the gentle breeze,
Long floating, fluttered light,
Beneath whose crimson canopy
There lay reclined a knight,
With arching crest and swelling breast,
On sailed the stately *swan*;
And lightly up the parting tide,
The little boat came on;
And onward to the shore she drew,
And leapt to land the knight,
And down the stream the little boat
Fell soon beyond the sight.
Rossetti, *Endeavour*.

The wild *swan* is found at all seasons in Orkney; a few pairs build in the holes of the loch of Stenness. These, however, are nothing to the flocks that visit us in October from the more northern climates, their summer retreats. Part of these continue with us all the winter, and the rest go to Caithness, and the other northern shires of Scotland; in April they go off again to the northward, except the few which remain here for the summer. Like the wild geese, these birds fly in the fashion of a wedge, making a fine melodious clang, which has, perhaps, furnished one occasion to give a musical voice to this bird. . . . The most obvious difference, and that which will immediately strike the observer on comparing the representation of our mute, half-domesticated *swans* with those of the Hooper and Bewick's *swans*, is, that the two most conspicuous colours on the back occupy opposite situations in these species. In the Hooper and Bewick's *swans*, the anterior portion of the back is black. The lute, and the lore to the eye orange-yellow; but in our mute *swan* it is the anterior portion of the back which is of a rich reddish orange, the base and the lore to the eye black, with a prominent black tubercle or knob on the upper part in front of the forehead, which in old males attains considerable size.—*Farrell*, *History of British Birds*, vol. iii. pp. 200-10.

Take three pounds of beef, beat fine in a mortar, Put it into the *swan*—that is, when you've caught her;

Some pepper, salt, mace, some nutmeg, an onion,
Will heighten the flavour in gourmet's opinion.
Then tie it up tight with a small piece of tape,
That the gravy and other things may not escape;
A meal paste, rather stiff, should be laid on the breast.

And some whity-brown paper should cover the rest.
Fifteen minutes at least ere the *swan* you take down,
Pull the paste off the bird, that the breast may get brown.

To a gravy of beef, good and strong, I opine,
You'll be right if you add half a pint of port wine;
Pour this through the *swan*, yes, quite through the belly.

And serve the whole up with some hot currant jelly.
N.B. The *swan* must not be skinned.

Norwich recipe for dressing a Swan, from Yarell.

Swan-herd. s. One who tends swans.

No person having swans could appoint a *swan-herd* without the king's *swanherd's* licence. Every *swanherd* on the stream was bound to attend upon the king's *swanherd* upon warning, or suffer fine.

The king's *swanherd* was bound to keep a book of *swanmarks*, and no now marks were permitted to interfere with old ones. Owners of swans, and their *swanherds*, were registered in the king's *swanherd's* book. The marking of the cygnets was generally in the presence of all the *swanherds* on that stream, and on a particular day or days, of which all had notice. Cygnets received the mark found on the parent birds; but if the old swans bore no mark, the whole were seized for the king, and marked accordingly. No *swanherd* to affix a mark but in the presence of the king's *swanherd*, or his deputy. . . . In the language of *swanherds*, the male swan is called a rolt, the female a pen. . . . The young during their first year are called cygnets; during the second year-birds. Afterwards, their plumage being perfect, white swans. The black tubercle at the base of the beak is called the berry; and a swan without any mark on the beak is said to be clear-billed.—*Farrell*, *History of British Birds*.

Swan-mark. s. Mark indicating the ownership of a swan.
The *swan-mark* called by Sir Edward Coke, *signi-nota*, was cut in the skin on the beak of the swan with a sharp knife or other instrument. These marks consisted of annulets, chevrons, crescents, crosses, initial letters, and other devices, some of which had reference to the heraldic arms of, or the office borne by, the swan-owner. . . . The two nicks in the *swan-mark* of the *Vintners' Company* are probably intended for two half lozenges, or a demi-lozenge on each side. . . . Mr. Kempe appears to discountenance the popular notion that the sign of the 'Swan with Two Necks' has any reference to the nicks in the *swan-mark* of this [the *Vintners' Company*]; but the sign has been considered a fair heraldic personification of the term, united as it is with the following consideration: that the swan has been for some hundred years identified with the *Vintners' Company* and its privileges; that the principal governing officers for the time being are, a master and three wardens, the junior warden of the year being called the *swan warden*; that models of *swans* form conspicuous ornaments in their hall, and that the first proprietor of the well-known inn, the 'Swan with Two Necks' was a member of the *Vintners' Company*.—*Farrell*, *History of British Birds*.

Swan-hopping. adj. [*Swan-upping*]. Annual excursion by the Lord Mayor of London up the Thames to inspect the swans; (the extracts are the authority for the derivation).
May it please you, sir, this morning I received a letter from you, but no name unto. Wherein you request me to come up to Epsford to confer with you touching the *upping of swans*, which I would most gladly perform, if I were not through very earnest business tied of my purpose. For to morrow being Twysdale I take my journey along the river of Thames at Gravesend. (Date, Hampton Court, July 30, 1571.)—*Maynard*, *To W. Moore, appointed by Lord Buckhurst Master of Swans, Surrey, from Yorkist*.
But this order must be kept that the *upping of swans* occur or within the said branches of the *Temps*, may be *upped* all in one day with the *upping of the Thames*, which is referred to Mr. Maynard of Hampton Court, who hath the ordering of the *Temps*. So if it please you from time to time to send and confer with him.—*Idem*.
Then whitelait down, and *swan-hopping* up the river.—*Theodore Hook*, *Gilbert Gurney*.

Dryden, Translation of Juvenal, vi. 707.
Sweetheart, with a single accent, and that on the
first syllable, is one thing. Sweet heart with two
accents at par is another. The difference between
two separate words and a single word made up
of two has been shown elsewhere; and the only
question that now remains is whether sweetheart
be an ordinary compound, or a derivative, like up-
sweat and others, i. e. a derivative wearing the garb
of a compound. It may be either. It may be heart
+ sweet, just as black bird—bird + black, or it may be
sweet + hart (as in bragart). In favour of this view
is the German liebhart; a word with the same
meaning. In the Low German, this would be a
possible compound; inasmuch as, in Low German,
hart=heart. In High German, however, the word
is herz—and herz can scarcely give such a com-
pound as liebhart.—*Dr. K. G. Latham, The English*

Language.

Swifts and swallows have remarkably short legs, and their toes grasp any thing very strongly.—*Berham, Physico-Theology*.

I have just met with a circumstance respecting the *swifts*, which furnishes an exception to the whole tenor of my observations, ever since I have bestowed any attention on that species of Hirundines. (Our *swifts*, in general, withdrew this year (1781) about the first day of August, all save one pair, which in two or three days was reduced to a single bird. The perseverance of this individual made me suspect that the strongest of motives, that of an attachment to her young, could alone occasion so late a stay. I watched, therefore, till the twenty-fourth of August, and then discovered that under the eaves of the church she attended upon two young, which were hatched, and now put out their white claws from a crevice. These remained till the twenty-seventh, looking more alert every day, and seeming to long to be on the wing. After this day they were missing at once, nor could I ever observe

them with their dam coursing round the church in the act of learning to fly, as the first broods evidently do. On the thirty-first, I caused the coveys to be searched, but we found only two coveys dead *swifts*, on which a second nest had been formed.—*G. White, Natural History of Selbourne.*

The *swift* comes to this country from Africa, and most probably by the same route as that pursued by the swallow and the martin; it generally appears early in May, and without more variation than is observed in the arrival of the other species of this family; but the greater part of them leaving us again by the middle of August, their stay here seldom much exceeds three months.—*Yarrell, History of British Birds.*

Swift. s. In Navigation. Rope so called.

See extract.

Swift [is] a rope used to confine the bars of the capstan in their sockets, whilst the men are turning it round; for which purpose it is passed through holes in the extremities of the bars, so as to strain them firmly together, like the spokes of a wheel; which operation is called *swift*. *Swift* is also a strong rope, sometimes used to encircle a boat lengthways, as well to strengthen and defend her sides, as to enable her the better to resist the impression of other boats which may run against her. It is usually fixed about ten inches below the boat's upper edge, or gunwale.—*Fulconer, Nautical Dictionary.* (Barney.)

Id. *Translation from Ovid, Metamorphoses*, b. i.

Man is the only animal that learns to *swim*, the

brute creation having an aptitude more or less by

instinct; the best example is exhibited by the

motion of a frog on the surface of the water. When a

man falls into deep water, he will rise to the surface

by floating, and will continue there if he do not ele-

vate his hands. If he move his hands in any man-

ner he pleases, his head will rise so high as to allow

him free liberty to breathe; and if he move his legs

as in the action of walking, or rather walking up

stairs, his shoulders will rise above the water; so

that he may use less exertion with his hands, or

apply them to other purposes. By these plain

directions, there is not the least doubt but that any

person would *swim* tolerably well; and when once

the ability to support one's self in the water is

acquired, other changes of position and action are

performed with facility. Doctor Franklin observed in his experiments and observations on this useful art:—1st. That the limbs and head of any human being are heavier than fresh water; the trunk is lighter merely because the lungs are inflated. 2nd. That the head is heavier than sea-water, but the limbs and trunk are lighter. 3rd. That a person throwing himself on his back in sea-water, will float with his face clear, so as to breathe with ease. 4th. That in fresh water the legs will gradually sink, and the body will float in an erect posture. 5th. That in this posture, if the head be held in its natural position, the surface of the water will reach just above the nostrils. 6th. That if the head be leaned quite back, the nose and mouth will be always above the water and free for breathing, and the body will rise and fall on every such inspiration and expiration.—*Fulconer, Nautical Dictionary.* (Barney.)

3. Glide along with a smooth or dizzy motion.

And seal'd his eyes in everlasting night. *Dryden.*

Pope.

Birds find ease in the depth of the air, as *swim-*

mers do in a deep water.—*Bacon.*

And first one universal shriek there rush'd

Louder than the loud ocean, like a crash

Of echoing thunder; and then all was hush'd,

Save the wild wind and the remorseless dash

Of billows; but at intervals there rush'd,

Accompanied with a convulsive splash,

A solitary shriek, the maddening cry

Of some strong swimmer in his agony.

Byron, Don Juan, ii. 53.

2. Protuberance in the leg of a horse.

As this animal [a species of *Astropecten*] is entirely unprovided with *swimming-organs*, and was found to be of such specific gravity as to sink immediately when placed in a jar of sea-water, it can scarcely have been taken up anywhere else than from the sea-bottom; and if this be admitted, it is obvious that at least 200 fathoms of the dredge-line must have been lying on that bottom.—*Dr. Carpenter. On Deep-sea Driftings, Proceedings of the Royal Society*, December 17, 1868.

Rondeletius was the first to notice that the swimming or air-bladder was more constantly found in fresh-water fishes than in those of the sea; and Needham and Redi soon after pointed out the diversity of form in the *swimming-bladder* that prevailed in different species. Redi afterwards described the duct or tube by which this air-vessel communicates with the alimentary canal; and valuable additions to our knowledge on this subject have been since made by Mourin, Lacépède, St. Hilaire, and Cuvier.—*Ferrell, History of British Fishes*.

'What do you mean by this, Mr. Sawyer?' replied the voice with great shrillness and rapidity of utterance. 'Ain't it enough to be *swindled* out of one's rank, and money lent out of pocket besides, and abused and insulted by your friends that dare to call themselves men; without having the house turned out of window, and noise enough made to bring the fire-engines here, at two o'clock in the morning?'—*Dickens, Pickwick Papers*, ch. xxiii.

Then he celebrated the rogue who had *swindled* him;—but of course never considered whether his own projects had been right, when tried by a moral standard.—*Hannay, Singleton Fastenay*, b. i. ch. x. [In a figurative sense (the German) *swindeln* is applied to dealings in which the parties seem to have lost their heads, as we say, to have become dizzy over unfounded or unreasonably prospects of gain. 'Ab der Assenat-*swindeln* (Assenat mania) an wilden bein.' 'Er hat bei dem Aktien-*swindeln* (Share mania) viel Geld verdient.' Goetz in Sanders. The word may be translated madness, delusion. Then, in a fictive sense, *swindeln*, one who induces delusions in others. Sybarite. *s.* Native of Sybaris, of the Greek town in the South of Italy; and, as such, a proper, rather than a common term. However, as the Sybarites were famous for their luxury and effeminacy, it, with its derivatives, has become common as well.

Sycamore. *s.* [spelt with *a*.] Tree of the genus *Acer* (*pseudoplatanus*).

A hedge about the sides and covering over head.
Dryden, The Flower and the Leaf, 72.
Sycamore is our *Acer* major; one of the kinds of maples; it is a quick grower. — *Mortimer, Husbandry.*

The indigenous origin of the *sycamore* has been doubted by many British authors, and indeed the earliest records we have speak of it as a stranger, or tree that had been introduced. Turner, who wrote in 1551, and Gerard, in 1587, both mention it as such; and Ray speaks of it as a tree common to court-yard, churchyards, avenues, &c., about middleton's house; Sir J. E. Smith, also, in the *English Flora*, states it to be 'not truly wild.' To differ from such authorities may seem presumptuous, but the circumstance of its always ripening seed in our ordinary seasons, and the facility with which it bears the most exposed situations, seem favourable to the supposition that in some parts of England it may be an indigenous plant. In Scotland, and the north of England, where it has long been a favourite tree, and where few residences of any note are without specimens of ancient *sycamores*, it has, no doubt been introduced, as it is only in situations where the operations of man are plainly to be traced that it is found of great age and size. — *Sclay, History of British Forest Trees.*

Sycamore. *s.* [spelt with *o*.] The extract from Brande notices the difference of spelling between this word and the name of the well-known British forest tree; the affinities of which are with the maples and the plane trees. The words are essentially the same; the better of the two forms being that which gives *o* in the second syllable. This is because the word is a Greek compound; *o* (*omicron*) in Greek, between the vowel which connects the two elements. These are *σικον* = fig + *μυρον* = mulberry; the *sycamore* having, to some extent, the fallage of the fig, along with the fruit of the mulberry. Its botanical name is *Sycomora* (originally *Ficus*) antiquorum.

The *a* in *Sycamore*, the English tree, serves as a distinction between the two; and so doing is conveniently retained.

Sycamine is the name of a third tree; of which the species is uncertain. It is formed like *σικαμιν* = cyclamen and is a derivative rather than a compound; i.e. *-μιν* cannot be found as a separate and independent word; and the connecting vowel is not *o* but *a*. Here, then, this

latter letter is in its proper place, in which it may have helped to fix the spelling in *Sycamore*.

This tree [the *sycamore*] is to be distinguished from the *agave* of the Bible (*Luke xix.*), which is a species of the, though probably the name originated in some confusion of ideas as to the identity of both. Indeed, in old books what is now universally called *sycamore* was sometimes written *agave*, while the *agave* it is in some modern versions of the Bible printed *sycamore*. — *Brande and Cox, Dictionary of Science, Literature, and Art.*

The sycophancy of A. Phillips had prejudiced Mr. Addison against Pope. — *Warburton, Note on Pope's Fourth Pastoral.*

Sycophant. *s.* [Gr. *συκομάρτης*, from *σικον* = a fig, and *μαρτυρ* = show, denounce. To export figs from Athens was forbidden by law; and they who informed against persons disregarding this law were called *sycophants*.] Talebearer; makebate; malicious parasite.

Accusing *sycophants*, of all men, did best sort to his nature; but therefore not *sycamine sycophants* because of an evil they said, they could bring any new or doubtful thing into him, but such as already he had been apt to determine; so as they came but as proofs of his wisdom, fearful and importunate, while the fear he had figured in his mind had any possibility of event. — *Sir P. Sidney.*

Men know themselves void of those qualities which the impudent *sycophant*, at the same time, both ascribes to them, and in his sleeve laughs at them for lacking. — *South, Sermons.*

The laws of Draco at Athens punished it [theft] with death; but his laws were said to be written in blood; and Solon afterwards changed the penalty to a pecuniary mulct. And so the Attic laws in general continued; except that, once in a time of dearth, it was made capital to break into a garden and steal figs; but this law and the informers against the offence grew so odious, that from them all malicious informers were styled *sycophants*; a name which we have much perverted from its original meaning. — *Sir W. Blackstone, Commentary on the Laws of England, li. ch. xvii.*

Sycophant. *v. n.* Calumniate. *Rare.*

He makes it his first business to tamper with his reader by sycophanting and mismanaging the work of his adversary. — *Milton, Apology for Smectymnua.*

Sycophantic. *adj.*

1. Talebearing; mischievously officious.

2. Fawning.

'Tis well known that in these times the illiberal sycophantic manner of devotion was by the wisest sort contemned. — *Lord Shaftesbury.*

Sycophantical. *adj.* Meanly officious; basely parasitical.

Henry the Eighth of England [was] led by the advice of some of his sycophantical popish prelates. — *Sir Simonds D'Ewes, Primitive Practice for Preaching Truth, p. 62: 1615.*

They . . . suffered themselves to be cheated and ruined by a sycophantical parasite. — *South, Sermons, cti. 102.*

Sycophanting. *part. adj.* Sycophantic.

His sycophanting arts being detected, that game is not to be played the second time; whereas a man of clear reputation, though his barque be split, has something left towards setting up again. — *Dr. H. More, Government of the Tongue.*

Sycophantize. *v. n.* Play the talebearer.

To sycophantize is to play the sycophant, or slander, or accuse falsely, to deal deceitfully. — *Blount, Glossographia.*

Sycophantry. *s.* Malignant tale-bearing.

It is fit that the accused should be acquainted with this, that competent time and means may be allowed for his defence, that his plea should receive, if not a favourable, yet a free audience; the contrary practice is indeed rather backbiting, whispering, supplanting, or sycophantry than fair and lawful judging. — *Narrow, Sermons, vol. i. serm. xz.*

Sycosis. *s.* [Gr. *σικον* = fig.] In *Medicine*. Cutaneous, or skin, disease so called.

Sycosis [is] a chronic pustular eruption, either scattered singly, or clustered, over the chin, upper lip, or lateral parts of the face; the pustules being pointed, and seated chiefly in the hair-follicles and connected tissues, and being sometimes propagated by contagion. — *Copland, Dictionary of Practical Medicine.*

Synite. s. In *Geology*. See extract.

Granite is a rock composed of variable proportions of felspar, quartz, and mica, intimately joined together, often separately crystalline, and without any base or ground. Felspar is usually the predominating rock, but it is sometimes equalled in quantity by quartz. In some varieties the quartz is wanting, and sometimes the mica; while occasionally this latter ingredient is replaced by hornblende, in which case the mass is called *syenite*. . . (so called from the ancient Egyptian quarries at Syene; the beautiful red granite, of which the Egyptian statues, and other sculptures, are made, is a *syenite*), and sometimes by talc, or a peculiar form of that mineral called chlorite; and in this latter state it has received the name of protogine, and is very abundantly exhibited in the higher peaks of Mont Blanc. — *Andral, Geology, Introductory, Description, and Practical*, pt. ii. ch. xlv.

Syll-, as the first syllable in composition. See under *Syn-*.

Syllabe. s. Syllable: (used more than once by B. Jonson, as in the extract).

A *syllabe* is a part of a word that may itself make a part of a word. — *English Grammar*, ch. vi. (Sarus by H. and W.)

Syllabic. adj. Relating to syllables.

In the responses also, which are noted for various voices, this *syllabic* distinction is sufficiently attended to. — *Mason, Three Essays on Church Music*, p. 16.

I don't pretend to determine whether the rhythm, in the change which the language has undergone, could have been equally well marked by the ancient *syllabic* quantity. But rhythm appears to have owed its origin to some feeling of its expediency. — *Bertrington, Literary History of the Middle Ages*, b. v.

Syllabical. adj. Relating to syllables; consisting of syllables.

The Christians have marked every the least various lesson, even *syllabical*. — *Lealie, Truth of Christianity demonstrated*.

Syllabically. adv. In a syllabical manner.

These and many like places, well considered, (upon which no brand of lie or falsity may be fixed,) though they do not literally and *syllabically* agree with the quotation, (but are verified either in a partial or concurrent sense,) may sufficiently justify that place in the first front of the literary art be no lie, but a divine scriptural truth. — *Hishop Gauden, Considerations on the Liturgy of the Church of England*, p. 25.

Syllable. s. [Gr. *σῖλλαβη*; Lat. *syllaba*.]

1. As much of a word as is uttered by the help of one vowel, or one articulation.

I heard
Each *syllable* that breath made up between them.
— *Shakespeare, Othello*, iv. 2.

The world confesses one Rome and one Caesar,
And, as his ride is infinite, his pleasures
Are unconfined; this *syllable*, his will,
Stands for a thousand reasons.

Massinger, The Roman Actor, l. 1.
There is that property in all letters of aptness to be conjoined in *syllables* and words, through the visible motions of the organs from one stop or figure to another, that they modify and discriminate the voice without appearing to discontinue it. — *Holker, Elements of Speech*.

2. Anything proverbially concise.

Abraham, Job, and the rest that lived before any *syllable* of the law of God was written, did they not sin as much as we do in every action not commanded? — *Holker, Ecclesiastical Polity*.
To-morrow, and to-morrow, and to-morrow,
Creeps in this petty space from day to day,
To the last *syllable* of recorded time;
And all our yesterday have lighted fools
The way to dusty death.

Shakespeare, Macbeth, v. 5.
He hath told so many melancholy stories without one *syllable* of truth, that he hath blunted the edge of my fears. — *Shelf*.

Syllable. v. a. Utter; pronounce; articulate.

Airy tongues that *syllable* men's names
On sands, and shores, and desert wildernesses.
— *Milton, Comus*, 209.

Syllabus. s. [See extract from Wedgwood.]
The comparative frequency of the spelling with *y* (*syllabus* rather than *sillabus*) is the only justification (if it is one) of the spelling as it stands here. *Syllabus*, the form of the entry in Wedgwood, is undoubtedly better. See under *Syn-*.

No *syllabus* made at the milking pail,
But what are composed of a pot of good ale.

Two lines would express all they say in two pages:
'No nothing but whilst *syllabus* and froth, without
solidity. — *Pelton*.

'Sister Beatrice' continued the father, resuming his gravity, 'is indeed blessed with a winning gift of making comfits and *syllabus*; but, on minute enquiry, I do not find that the youth has tasted any of them.' — *Sir W. Scott, Castle Dangerous*.

I am sorry to find here and every where people out of character, and that wine and tea should enter where they have no pretence to be, and usurp the rural food of *syllabus*, &c. — *Life and Correspondence of Mrs. Delany*, edited by Lady Llanover, vol. ii. p. 303.

[*Syllabus* (is) a frothy food to be slapped or slubbered up by milking from the cow into a vessel containing wine or sidra, spice, &c. And we will go to the dawns and slubber up a *syllabus*.] (Two Lancashire lavers, in Halliwell.) The word is a corruption of *slap-up*, or *slub-up*, . . . and is the exact equivalent of Platt-Deutsch *slubb* or *slubb* *schabte* watery food, spummat, explained by Stahler as *schubb* was, from *schlappen*, *slappen*, to slap, lap, or sup up food with a certain noise. *Schlabete*, *schlappete*, weak soup. . . . On the same principle are formed Provincial English *slubber*, anything of a glutinous consistency, the spawn of leeks or fungus; *slub*, wet and loose mud. (Halliwell.) Dutch *slomp* (*syllabus*) a certain drink made of milk, sugar, &c. [Boulton]. is derived in like manner from *slumpen*, Bavarian *slampen*, to lap, sup up, junket. — *Walwood, Dictionary of English Etymology*.]

Syllabus. s. Abstract, or compendium, containing the heads of a discourse: (common as the title of a book).

A *syllabus* deals neither in development nor in diversified example; and does not make the space occupied by any detail a measure of its importance as a part of the whole. I have omitted many subjects which are to be found in all the books, or dwelt lightly upon them, partly because more detail is contained in my Formal Logic, partly because any one who masters this tract will be able to judge for himself what I should have written on the omitted subjects. I have also endeavoured to remember that as a work of this kind proceeds, less detail of explanation is necessary. — *The Morgan, Syllabus of a Proposed System of Logic*, preface.

His jiddle career was, from first to last, utterly inconsistent with the doctrines of the *syllabus* which form the political creed of modern Rome. — *Saturday Review*, May 23, 1869.

Syllopsis. s. [Gr. *σῖψις* = taking, from root (*σῖψ*-) of *σῖψις* = I take.] In *Grammar*. See extract, where it will be seen that it is an approximate translation of *conception* (con = with + *capio* = I take).

Syllopsis, in grammar, (is) a figure by which we conceive the sense of words otherwise than the words import; and thus make our construction not according to the words, but the intention of the author. — *Koca, Karyopædia*.

Syllogism. s. [Gr. *συλλογισμὸς*, from *σύν* + *λογισμός* = calculation, reckoning; *λογίζω* = reckon, reason; *λόγος* = word, doctrine, reason, principle.] In *Logic*. Argument composed of three propositions; as, 'Every man thinks; Peter is a man; therefore Peter thinks.' (This is the explanation of Johnson, which, so far as it goes, is accurate. It is only to the simplest, and the typical form of the syllogism that it applies. The analysis of the example, however, tells us that, while the *propositions* are three, the *terms* are six, each term being repeated, and repeated in different propositions. The two propositions which, between them, give us all the three terms — *man*, *Peter*, *thinks* — are the *premises*; the single one, in which only two of them appear — *Peter*, *thinks* — is the *conclusion*. Hence it is easy to see that the *third* term has served as a kind of measure for the premises, but omitted in the conclusion, is the *middle* term; and it is, probably, the one by which the syllogistic character of the argument is determined. It certainly brings together the other two, and, by so doing, explains the etymology. The extent to which the opinions of the chief authorities in Logic and Mental Philosophy take different views both of the value and the structure of the syllogism, is indicated by the numerous and perhaps over-long extracts).

A piece of rhetoric is a sufficient argument of

logic, an apologue of *Aesop* beyond a *syllogism* in *Marlboro*. — *Sir T. St. John*.

What a miraculous thing should we count it, if the flint and the steel, instead of a few sparks, should chance to knock out deductions and *syllogisms*. — *Hentley*.

That the power of reasoning (or, as it has been sometimes called, the discursive faculty) is implied in the powers of intuition and memory, appears also from an examination of the structure of *syllogisms*. It is impossible to conceive an understanding so formed as to perceive the truth of the major and minor propositions, and not to perceive the truth of the conclusion. Indeed, as in this mode of stating an argument the mind is led from universals to particulars, the truth of the conclusion must have been known before the major proposition is formed. — *Dugald Stewart, Elements of the Philosophy of the Human Mind*, p. 30: 1854.

Among the logicians an instrument of universal empire in the regions of intelligence was supposed to have been discovered by the invention of the *syllogism*. Yet in truth what is the exploit achieved by it? The dividing an argument into three parts or members, distinguished from each other by so many names — names in the invention of which, of two of them at least, not quite so much felicity has been displayed, as in those for which we are indebted to the genius of Lavoisier and Laplace. — *Bentham, Rationality of Judicial Evidence*, b. iii. ch. x. § 4.

This retardation of the progress of reasoning is one circumstance which distinguishes the *syllogism*; but this alacrity which is implied in the very theory of it distinguishes it still more. It constantly assumes as the first stage of that reasoning by which we are to arrive at a particular truth, our previous knowledge of that particular truth. The major is the very conclusion itself under another form, and its truth is not more felt than that which it professes to develop. Thus to take one of the trifling examples which in books of logic are usually given, with a most appropriate selection, to illustrate this worse than trifling art — when, in order to prove that 'John is a sinner,' I do not address any particular sin of which he has been guilty, but draw up my accusation more irresistibly, by the major of a *syllogism*, 'All men are sinners.' 'John is a man,' therefore, 'John is a sinner.' If I really attached any meaning to my major proposition, 'All men are sinners,' I must at that very moment have felt as completely that John was a sinner, as after I had pursued him, technically, through the minor and conclusion. — *Dr. T. Brown*.

Not only is the deductive, thus, in a general way, dependent for its possibility on the inductive, *syllogism*; the former is, what has not been observed in principle and detail — in whole and in part — in end and means — in perfection and imperfection, precisely a counterpart or inversion of the latter. The attempts that have been made by almost every logician, except (perhaps) Aristotle, to assimilate and even identify the two processes, by reducing the inductive *syllogism* to the schematic properties of the deductive, proceeding as they do on a total misconception of their analogy and difference, have contributed to involve the doctrine of logical induction in a cloud of error and confusion. The inductive inference is equally independent, and, though far less complex, equally worthy of analysis as the deductive; it is governed by its own laws; and, if judged aright, must be estimated by its own standard. The correlation of the two processes is best exemplified by employing the same symbols in our ascent through an inductive, and our re-descent through a deductive *syllogism*.

Inductive:		Deductive:	
x, y, z are A;	B is A;	x, y, z are A;	B is A;
x, y, z are (whole) B;	x, y, z are (under) B;	x, y, z are (whole) B;	x, y, z are (under) B;
therefore B is A,	therefore x, y, z are A,	therefore B is A,	therefore x, y, z are A,
or	or	or	or
B contains x, y, z;	A contains B;	B contains x, y, z;	A contains B;
x, y, z constitute B;	therefore A contains x, y, z.	x, y, z constitute B;	therefore A contains x, y, z.

These two *syllogisms* exhibit, each in its kind, the one natural and perfect figure. — *Sir W. Hamilton, Discussions on Philosophy and Literature*, p. 163: 1853.

Every conclusion is deduced in reality, from two other propositions (theses called premises); for though one of these may be, and commonly is supposed, it must nevertheless be understood as admitted; as may easily be made evident by supposing the denial of the supposed premises, which will at once invalidate the argument; e.g. if any one from perceiving that 'the world exhibits marks of design,' infers that 'it must have had an intelligent author,' though he may not be aware in his own mind of the existence of any other premise, he will readily understand, if it be denied, that 'whatever exhibits marks of design must have had an intelligent author'; that the affirmative of that proposition is necessary to the validity of the argument; or, again, if anyone on meeting with 'an animal which has horns on the head' infers that 'it is a ruminant,' he will easily perceive that this would be no argument to anyone who should not be aware of the general fact that 'all horned animals ruminate.' An argument thus stated regularly, and at full length, is called a *syllogism*, which therefore is evidently not a peculiar kind of argument, but only a peculiar form of expression, in which every argument may be stated. When one of the premises is suppressed,

Symbol. *s.* [Lat. *symbolum*; Gr. *σύμβολον*, from *σύν* + *βάλλω* = I cast; the original meaning being a contribution to a feast, fund, or the like. See extracts under the first head, especially those that indicate its import in the Greek *σύμβολον* and Latin *symbolum* = creed.]

1. Contribution to a general fund. *Rare.*

This reckoning I will pay

Without conferring *symbols*.

B. Jonson, Epigrams.

Christ hath finished his own sufferings for expiation of the world, yet there are portions that are behind of the sufferings of Christ, which must be filled up by his body, the church, and happy are they that put in the greatest *symbol*; for in the same measure you are partakers of the sufferings of Christ, in the same shall you be also of the consolation. — *Jeremy Taylor, The Faith and Patience of the Saints.*

In like manner he [Jeremy Taylor] employs *symbol* in the sense which the Greek *σύμβολον* sometimes had, namely, the contribution which each person at a picnic throws into the common stock. — *Archbishop Trench, On some Deficiencies in our English Dictionary.*

1. The primary meaning of the verb *συμβάλλειν* expresses the act of several in constituting or throwing together portions to form a whole. Hence *σύμβολον* signified a treaty or agreement. It seems to be in this sense that the creeds are termed by early ecclesiastical writers *symbols*: either because (as Augustine says) all the fundamental doctrines of Christianity are collected in them; or from the old traditional story, related by Rufinus, that the creed called the Apostles' Creed was formed by each of them contributing a sentence. 2. The mind may be said to put together outward appearances, and collect from them the notion of a thing signified by them; and hence the outward appearances themselves may be called *symbols*, signs, or emblems; while the act of the mind is termed conjecture (Lat. *conjectio*). Thus, the standards or military banners were called by the Greeks *symbols*; as likewise omens and portents; and expressions or figures denoting a received meaning, as the Pythagorean *symbols*. In this sense, the early Christians gave the general name of *symbols* to all rites, ceremonies and outward forms bearing a religious meaning, to the sacraments and the sacramental elements, to the cross, and, in later times, to images and pictures. *Symbols*, properly so called, must be distinguished from types, and from more symbolical attributes, such as the figures usually introduced in representations of the four Evangelists. Symbolical books are such books as contain the creeds and confessions of different churches: as the three creeds, received by all; the Confession of Augsburg, received by the Lutherans; the articles of the church of England, &c. The Germans call the study of the *symbols*, and mysterious rites of antiquity, and also the study of the history and contents of christian creeds and confessions of faith, by the name of *symbolics* (mythological or theological). — *Brande and Cox, Dictionary of Science, Literature, and Art.*

2. Abstract; compendium; comprehensive form.

Beginning with the *symbol* of our faith, upon that the author of the gloss enquires into the nature of faith. — *Baker.*

3. Type; that which comprehends in its figure a representation of something else.

Weren't to pronounce his baptism,

All souls and *symbols* of redemption min,
His soul is so enflam'd to her love,
That she may make, unmake, do what she list.

Shakespeare, Othello, ii. 3.

Salt, as incorruptible, was the *symbol* of friendship; which, if it casually fell, was accounted ominous, and their amity of no duration. — *Sir T. Browne, Vulgar Errors.*

Words are the signs and *symbols* of things; and as, in accounts, ciphers and figures pass for real sums, so words and names pass for things themselves. — *South, Sermons.*

The heathens made choice of these lights as apt *symbols* of eternity, because, contrary to all sublunary beings, though they seem to perish every instant, they renew themselves every morning. — *Aldrich, Dialogues on the Usefulness of Ancient Models.*

The privileges which these towns of France derived from their charters were surprisingly extensive; especially if we do not suspect some of them to be merely in confirmation of previous usages. They were made capable of possessing common property, and authorized to use a common seal as the *symbol* of their incorporation. — *Hallam, View of the State of Europe during the Middle Ages, pt. II. ch. II.*

Let us examine and analyse such an example as:—
'Every animal that has horns on the head is ruminant; the elk has horns on the head; therefore the elk is ruminant.' It will easily be seen that the

validity (or 'conclusiveness,' or 'soundness') of the argument does not at all depend on our conviction of the truth of either of the premises; or even on our understanding the meaning of them. For if we substitute for one of the things we are speaking about, some unmeaning *symbol* (such as a letter of the alphabet), which may stand for anything that may be agreed on, the reasoning remains the same. For instance, suppose we say (instead of 'animal that has horns on the head'), 'Every X is ruminant; the elk is X; therefore the elk is ruminant; the argument is equally valid. And again, instead of the word 'ruminant,' let us put the letter 'Y': then the argument, 'Every X is Y; the elk is X; therefore, the elk is Y;' would be a valid argument as before. And the same would be the case if you were to put 'Z' for 'the elk'; for the syllogism 'Every X is Y; Z is X; therefore Z is Y,' is completely valid, whatever you suppose the *symbols* X, Y, and Z to stand for. Any one may try the experiment by substituting for X, Y, and Z, respectively, any words he pleases, and he will find that, if he does not preserve the same form of expression, it will be impossible to admit the truth of the premises, without admitting also the truth of the conclusion. — *Archbishop Whately, Elements of Logic, i. § 4.*

However, that class of cause-and-effect speculators, with whom no wonder would remain wonderful, . . . and even the Unknown, the Infinite in man's life, lost under the words Eudæmonism, Euporidism, Spirit of the Age, and so forth, obtained, as it were, an algebraical *symbol* and given value—have now well-nigh played their part in European culture. — *Carlyle, Critical and Miscellaneous Essays.*

Sign or badge to know one by; memorial.

That as a sacred *symbol* it may dwell

In her some's flesh to mind remembrance.

Spenser, Faerie Queen.

Its towns may figure on our maps, its revenues, population, manufactures, political connexions, may be recorded in statistical books; but the character of the people has no *symbol* and no voice; we cannot know them by speech and discourse, but only by more sight and outward observation of their manners and procedure. — *Carlyle, Critical and Miscellaneous Essays, State of German Literature.*

Another matter it is, however, when the object to be treated of belongs to the invisible and immaterial class; cannot be pictured out even by the writer himself, much less, in ordinary *symbols*, set before the reader. — *Ibid.*

5. Lot; sentence of adjudication.

The persons who are to be judged, even you and I and all the world, kings and priests, nobles and learned, the crafty and the easy, the wise and the foolish, the rich and the poor, the prevailing tyrant and the oppressed party, shall all appear to receive their *symbol*. — *Jeremy Taylor, Sermons, p. 3: 1603.*

Symbol. *v. a.* Symbolize. *Rare.*

So, *symbolized* forth in three twin and fair flowers which Eve saved for Earth out of Paradise, each with the virtue to heal or to strengthen, stored under the leaves that give sweets to the air;—here, soothing the heart when the world brings the trouble—here, recruiting the soul which our sloth or our senses enervate, leave us woman, at least, in the place Heaven assigns to her amidst the multifarious 'Varieties of Life.' — *Lord Lytton, My Novel, conclusion.*

Symbolical. *adj.* Representative; typical; expressing by signs; comprehending something more than itself.

By this inebriement idolatry first crept in, men converting the *symbolical* use of idols into their proper worship, and receiving the representation of things unto them as the substance and thing itself. — *Sir T. Browne.*

The sacrament is a representation of Christ's death, by such *symbolical* actions as himself appointed. — *Jeremy Taylor.*

Nextus now sends to his father for advice, which is given by the *symbolical* answer of decapitating the tallest puppets. — *Sir G. C. Lewis, An Enquiry into the Credibility of the Early Roman History, ch. xi. sect. 34.*

Symbolically. *adv.* In a symbolical manner; typically; by representation.

It *symbolically* teaches our duty, and promotes charity by a real signature and a sensible sermon. — *Jeremy Taylor.*

Symbolism. *s.* See extract.

Symbolism [is] the name applied to the system which invested the forms of Christian architecture and ritual with a symbolical meaning. The extent to which this *symbolism* was carried has been a subject of much controversy. Specimens of such interpretation may be found in the writings of Hugh of St. Victor; but the system was carried out to its utmost extent in the Rationale Divinorum Officiorum by Durandus, bishop of Meulan, in the thirteenth century. — *Brande and Cox, Dictionary of Science, Literature, and Art.*

Symmetrical. *adj.* Proportionate; having parts well adapted to each other.

Such an incoherent medley of laws and magistrates, upon the *symmetrical* arrangement of which all social economy mainly depends, could not fail to produce a violent collision. — *Hallam, View of the State of Europe during the Middle Ages, pt. II. ch. vii.*

Symmetrist. *s.* One very studious or observant of proportion. *Rare.*

Some exact *symmetrists* have been blamed for being too true. — *Sir H. Wotton, Elements of Architecture.*

Symmetry. *s.* [Gr. *μετρον* = measure.]

Adaptation of parts to each other; proportion; harmony; agreement of one part to another.

Of harmony, he would at next have said
That harmony was she. *Donne.*

And in the *symmetry* of her parts is found
A power, like that of harmony in sound. *Waller.*
Symmetry, quality, and correspondence of parts, is the discernment of reason, not the object of sense. — *Dr. H. More.*

Nor were they only animated by him, but their measure and *symmetry* were owing to him. — *Dryden.*

Not only the capacity for motion, but the aspect and *symmetry* of the body is preserved by the muscles being marshalled according to order; e.g. the mouth is hidden in the middle of the face, and its angles kept in a state of exact correspondence, by two muscles drawing against and balancing each other. — *Paley, Natural Theology, ch. 12.*

Prior, Epilogue to Lucina.

Morbid sympathies may be defined to be associated states of disordered function, or of diseased action; the disorder or disease of one system, or organ, or part, affecting other systems, organs, or parts, according to their organic connections, their functional relations, and their several tendencies, or acquired or constitutional predispositions; the consecutive *sympathetic* disturbance often being more prominently manifested than the original or efficient morbid condition, and thereby frequently concealing or masking this condition.—*J. Copland, M.D., F.R.S., Dictionary of Medicine*.

Sympathetic Inks [are] liquids which are colourless or so slightly coloured that characters written with them are invisible till acted upon by some reagent. The best is a dilute solution of chloride of cobalt. Markings made with it become blue when the paper on which they are written is held in front of a fire, the slightly tinted pink hydrated salt then becoming anhydrous and deeply blue.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

In *Anatomy*. Term applied to that part of the nervous system represented by the Great Sympathetic nerve, supplying the stomach, connected with processes of nutrition, growth, and the like, rather than with ordinary sensation, and the transmission of stimulus to the muscles.

Sympathetical. adj. Sympathetic.

All the ideas of sensible qualities are not inherent in the inanimate bodies; but are the effects of their motion upon our nerves, and *sympathetical* and vital passions produced within ourselves.—*Bentley*.

Sympathetically. adv. In a sympathetic manner; with sympathy; in consequence of sympathy.

He seems to have caught *sympathetically* Sandys's sudden impulse to break forth into a devout song at the awful and inspiring spectacle.—*T. Warren, Notes on Milton's Smaller Poems*.

Sympathize. v. n.

1. Feel with another; feel in consequence of what another feels; feel mutually.

The men *sympathize* with the mastiffs in robustious and rough coming on.—*Shakespeare, Henry V. iii. 7*.

The thing of courage,

As roused with rage, with rage doth *sympathize*.
Id., Troilus and Cressida, i. 3.

Nature, in awe to him,
Hath do'd her gaudy trim,
With her great master so to *sympathize*.

Milton, On the Morning of Christ's Nativity, 32.

The limbs of his body is to every one a part of himself: he *sympathizes* and is concerned for them.—*Locke*.

Their countrymen were particularly attentive to all their story, and *sympathized* with their heroes in all their adventures.—*Addison, Spectator*.

Though the greatness of their minds exempts them from fear, yet none condole and *sympathize* more heartily.—*Cullier*.

Melior was soon informed of the language that had been used against him in the camp, and indignantly complained of it to Perdiccas, whom he probably suspected to be its secret author. But Perdiccas was so great a master of dissimulation, that he completely lulled his suspicions. He affected to *sympathize* deeply with his resentment, and proposed to arrest the agitators.—*Bishop Thirlwall, History of Greece, ch. lvi*.

Lady Everingham thoroughly understood the art of conversation; which, indeed, consists of the exercise of two fine qualities. You must originate, and you must *sympathize*; you must possess at the same time the habit of communicating and the habit of listening. The union is rather rare, but irremissible.—*B. Disraeli, Coningsby*.

2. Agree; fit.

Green is a pleasing colour, from a blue and a yellow mixed together, and by consequence blue and yellow are two colours which *sympathize*.—*Dryden, Translation of Du Fresnoy's Art of Painting*.

Sympathizer. s. One who feels, or professes to feel, for, or with, another: (used, of late, with reference to common feeling or common action in political matters).

Can we expect them to respect a policy which induces in inconsistency like siding the Turks to crush the Montenegrins, . . . or threatening the Italian *sympathizers* with our man-of-war, when

the Herzegovinians in their agony appealed to them for aid against . . . their Turkish taskmasters; when, on the other hand, we all but aided these same Garibaldians in their expedition against a government, which . . . cannot well have been marked by characteristics worse than those assigned by Sir H. Bulwer to the rule of the Turk.—*Dr. H. Sandwith, Preface to Notes on the South Slavonic Countries of Austria and Turkey in Europe, p. 12: 1863*.

Sympathizing. part. adj. Feeling, or showing, sympathy; acting as a sympathizer.

It was made a crime to attend a dissenting place of worship. A single justice of the peace might convict without a jury, and might, for the third offence, pass sentence of transportation beyond sea for seven years. With refined cruelty it was provided that the offender should not be transported to New England, where he was likely to find *sympathizing* friends.—*Macaulay, History of England, ch. ii*.

Sympathy. s. [Gr. *σύνθεσις*.] Fellow feeling; mutual sensibility; quality of being affected by the affection of another.

A world of earthly blessings to my soul,
If *sympathy* of love unite our thoughts.

Shakespeare, Henry VI. Part II. ii. 1.

You are not young; no more am I: go to, then, there's *sympathy*: you are merry, so am I: ha! ha! then there's more *sympathy*: you love sack, and so do I: would you desire better *sympathy*?—*Id., Merry Wives of Windsor, ii. 1, letter*.

But what it is,

The action of my life is like it, which I'll keep,
If but for *sympathy*.
Id., Cymbeline, v. 4.

I started back;

It started back: but pleased I soon return'd;
Pleased it return'd as soon, with answering looks
Of *sympathy* and love.

Milton, Paradise Lost, iv. 402.

They saw, but other sight instead, a crowd
Of ugly serpents: horror on them fell,
And horrid *sympathy*.
Id., Ibid. x. 538.

By *sympathy*, or some comaternal force,
Powerful at greatest distance to unite,
With secret amity, things of like kind,
By secretest conveyance.

Id., Ibid. x. 240.

There never was any heart truly great and generous, that was not also tender and compassionate: it is this noble quality that makes all men to be of one kind; for every man would be a distinct species to himself, were there no *sympathy* among individuals.—*South, Sermons*.

Can kindness to desert like yours be strange?
Kindness by secret *sympathy* is tied;
For noble souls in nature are allied.

Dryden, Aurengzebe, iv. 1.

There are such associations made in the minds of most men, and to this might be attributed most of the *sympathies* and antipathies observable in them.—*Locke*.

Horrible forms,

What and who are ye? Never yet there came
Plantations so foul thro' monster-breeding hell
From the all-miserable brain of Jove;
Whilst I behold such execrable shapes,
Methinks I grow like what I contemplate,
And laugh and stare in loathsome *sympathy*.

Shelley, Prometheus Unbound.

It would be unfair to blame either those concerned in this commission, . . . or those high-spirited representatives of the people, whose patriotic firmness has been hitherto commending all our *sympathy* and gratitude, unless we could distinctly pronounce by what center means they could restrain the excesses of government.—*Italian, View of the State of Europe during the Middle Ages, pt. iii. ch. viii*.

We may suspect that the partiality which the mind is apt to acquire for whatever it has made the subject of long investigation and study, especially if it be something which has been generally neglected, and perhaps in some instances a morbid *sympathy* with depression and defeat, which certain historical and philosophical speculators have in common with the readers and writers of sentimental novels, are at the bottom of much of this marvelling and purposeless lamentation.—*Craik, History of English Literature, vol. i. p. 104*.

The colour . . . had an appearance of decided weakness. Some people would have thought it ridiculous to suppose it was painful, for his organization was of a character which entered into acute and intense *sympathy* with everything and everybody. Where the mass of people laughed at a person, Singleton suffered for him.—*Hannay, Singleton Postscript, h. l. ch. iv*.

2. In *Medicine*. Change of condition in one organ, or one part of the body coinciding with a change in some other part.

In 1824, I defined *sympathy* to be that state of an organ or texture having a certain relation to the condition of another organ or texture, in health and disease; or a related state of the vital manifestations or actions in different organs or textures, as when part is excited or affected, others are likewise affected or disordered. I then classed *sympathies* into the reflex and the direct; the former taking place through the instrumentality of the sensorium, the latter being independent of it, and occurring through means of the ganglionic nerves, and chiefly of those

which form communicative chords between the viscera, and of those which are distributed to the blood-vessels.—*Coyland, Dictionary of Practical Medicine*.

Sympathy. v. n. Sympathize. *Rare*.

Measures that are not men's, as man is man,
But as his nature *sympathizes* with best.

Mum's Looking Glass: 1638.

(Nares by H. and W.)

Symphonicus. adj. Harmonious; agreeing in sound.

Up he rode,

Follow'd with acclamation and the sound
Symphonicus of ten thousand harps, that tuned
Angelic harmonies. *Milton, Paradise Lost, vii. 557*.

How sweet a scene will earth become!
Of pure spirits, a pure dwelling-place,
Symphonicus with the planetary spheres.

Shelley, Queen Mab.

Symphonize. v. n. Agree with; be in unison with.

I mean the law and the prophets *symphonizing*
with the gospel.—*Boyle, Style of Holy Scriptures, p. 253*.

Symphony. s. [Gr. *σύνθεσις*; *φωνή* = voice, sound.]

1. Consonance or harmony of sounds.

A learned searcher from Pylæon's school,
where it was a maxim that the images of all things
are latent in numbers, determines the closest
proportion between breadth and height, reducing
symmetry to *sympphony*, and the harmony of sound
to a kind of harmony in sight.—*Sir H. Wotton*.

Speak, ye who best can tell, ye sons of light,
Angels for ye behold him, and with songs
And choral *symphonies*, day without night,
Circle his throne rejoicing.

Milton, Paradise Lost, v. 100.

The trumpet's sound,

And warlike *sympphony* is heard around;
The marching troops through Athens take their
way;

The great earl-marshal orders their array.
Dryden, Palamon and Arcite, iii. 525.

2. Musical composition so called.

The interim may both with profit and delight be taken up, in reverencing and composing their travelled spirits, with the solemn and divine harmonies of music heard or learnt; either while the skilful organist pipes his grave and funeral descent in lofty fumes, or the whole *sympphony* with artful and unimaginable touches adorn and grace the well-studied chords of some chosen composer.—*Milton, Tractate on Education*.

There is, perhaps, no musical composition in which the power of the author is so completely developed as in a *sympphony*. The musician in it becomes a poet, or perhaps rather a painter. Scenes and the passions are represented by a combination of musical sounds; as an illustration, we need only cite that splendid work of Beethoven known to all under the name of *Il Pastorale*. The general form of the *sympphony* may be thus described: It opens with a short, serious, slow movement; this is followed by and forms a contrast to one of spirit and of a lively nature; then comes an andante varied, or an andante or slow movement; a minuet with its trio follows; and the *sympphony* usually closes with a lively rondo, or a theme of rapid motion.—*Brande and Cox, Dictionary of Science*.

Symphysis. s. [Gr. *σύνθεσις*; *φύσις* = I become, am born, grow.] In *Anatomy*.

Contact and partial junction of two bones, or joints, not admitting of motion.

Symphysis, in its original signification, denotes a commencement, or growing together; and perhaps is meant of those bones which in young children are distinct, but after some years unite and consolidate into one bone.—*Wise, Surgery*.

Sympiesometer. s. [Gr. *σύνθεσις* = I compress, press, strain + *μέτρον* = measure.] In *Physics*. Instrument for determining the pressure of anything through the compression (Latin *com + premo* = I press; so that the two compounds translate one another) of the object affected by it.

From the barometer the mind easily passes to the allied instrument of Adie, the *sympiesometer*, from *σύνθεσις*, I compress, and *μέτρον*, a measure. The object of these instruments is similar; and from the peculiarities of the construction of the latter, it is exceedingly well adapted for being used at sea. The principle of its construction is the power of the atmosphere to compress a column of air separated by a fluid which neither acts upon the emulsified gas, nor is acted upon by the external air. The instrument consists of a glass tube about 18 inches long, and 0.7 inch internal diameter, having an oval bulb above, and terminating in an open cistern below. Into the tube and bulb, hydrogen gas is carefully introduced, and into the cistern, oil of almonds, coloured red by alkali root. The atmosphere raises the unctuous fluid, and thus the gas is compressed

according to the amount of external pressure. To provide against error from the changing bulk of gases under the influence of temperature, a thermometer and sliding scale are introduced, so that the instrument thus made is exquisitely sensitive to atmospheric mutations, even more readily so, than the delicate mercurial barometer, but it is inferior to it for meteorological purposes, chiefly in consequence of absorption of the hydrogen by the oil.—*Thomson, Meteorology*, p. 452.

Sympoia. adj. Relating to merry makings; happening where company is drinking together.

By desiring a secrecy to words spoke under the rose, we only mean in society and computation, from the ancient custom of *sympoia* meetings to wear chaplets of roses about their heads. *Sir T. Browne, Vulgar Errors*.

In some of these *sympoia* disputations amongst my acquaintance, I affirmed that the dietetic part of medicine depended upon scientific principles.—*Arbutnot*.

Sympotium. s. [Gr. συμπίσιον = drinking together, from the same root of πίνω, πίνω = I drink; ποίσις = drinking.] Feast; merry making; drinking together.

It appears that the company dined so very late, (in 1600,) as at half an hour after eleven in the morning; and that it was the fashion to ride to this polite *sympotium* on a Spanish jennet, a servant running before with his master's cloak.—*T. Norton, History of English Poetry*, iv. 18.

Four days in a week I had a place, without invitations, at the hospitable tables of Melancton Goodfellow and Du Boage, of the celebrated Helvetius and of the Baron d'Holbach. In these *sympotia* the pleasures of the table were improved by lively and liberal conversation; the company was select, though various and voluntary.—*Gibbon, Memoirs*, p. 79.

Symptom. s. [Gr. σύμπτωμα, συμπίπτω.] 1. Something that happens concurrently with something else, not as the original cause, nor as the necessary or constant effect.

The *symptoms*, as Dr. Sydenham remarks, which are rationally scientific, are often nothing but the principles or seeds of a growing, but unripe gut.—*Sir R. Blackmore*.

2. Sign; token.

Ten glorious campaigns are passed, and now, like the sick man, we are expiring with all sorts of good *symptoms*.—*Swift*.

It is important for us to understand that *symptoms* or *signs* of disease are never to be taken in the like sense with that in which the *signs* of external things are often regarded. . . . There is nothing that we call a *symptom* of a disease, which does not contain within itself much more than a mere *sign*. Heat, pain, redness, swelling, are called the *signs* of inflammation; but nature does not intend by them barely to intimate that inflammation exists; they are essentially connected with the processes she is carrying on. Thus at early dawn we point to the first glimmering in the east, and call it a *sign* of the rising sun; but it is more—it is an emanation from his beams. We look at the cloud above our heads, and say it is a *sign* of rain; but it is the gathering of the waters themselves.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. vi.

Symptomatic. adj. Relating to, connected with, having the character of, constituted by a symptom or number of symptoms.

The *symptoms* and *signs* by which the seats and natures of diseases are indicated, are first, vital or spontaneous, or strictly *sympathetic* and *sympomatic*; or second, physical or artificial. . . . In treating of the *sympathetic* and *sympomatic* manifestations of disease, or of symptoms more especially, I shall first notice those which appertain to the appearance and attitude of the body, and to the animal, locomotive, and sensory functions; secondly, those which belong to the respiratory and circulating organs; thirdly, those which are manifested by the digestive and assimilating organs; and, lastly, those which concern the urinary and sexual functions and organs.—*Copland, Dictionary of Practical Medicine*.

Symptomatically. adj. Symptomatic.

Symptomatically is often used to denote the difference between the primary and secondary causes in disease; as a fever from pain is said to be *symptomatically*, because it arises from pain only; and therefore the ordinary means in fevers are not in such cases to be had recourse to, but to what will remove the pain; for when that ceases, the fever will cease, without any direct means taken for that.—*Quincy*.

By fomentation and a cataplasm the swelling was dissipated; and the fever, then appearing but *symptomatically*, lessened as the heat and pain mitigated.—*Wise, Surgery*.

Symptomatically. adv. In a symptomatic manner; in the nature of a symptom.

The causes of a bubo are vicious humours abounding in the blood, or in the nerves, exerted sometimes critically, sometimes *symptomatically*.—*Wise, Surgery*.

Symptomatology. s. [Gr. λόγος = word, reason, doctrine.] In *Medicine*. Doctrine of symptoms.

Sym-, as an initial element in composition is the Greek σύν, the Latin cum = with. Before p, b, f, or v it becomes m (*symbol*); before l the result is a double -l (*syllable*), from σύν + the root of λαμβάνω = I take). Compounds with this initial constitute the greater part of the English words beginning with sy. With one or two exceptions (*syllabus* and *syllph*, both better spelt with s), all the words thus beginning are of Greek origin.

Synagogue. s. [Gr. συναγωγή.] Assembly of the Jews to worship.

As his custom was, he went into the *synagogue* on the sabbath-day.—*Luke*, iv. 16.

(Go, Tubal, and meet me at our *synagogue*.

Shakespeare, Merchant of Venice, iii. 1.

William the Conqueror permitted great numbers of Jews to come over from Rouen, and to settle in England, about the year 1067. Their multitude soon increased, and they spread themselves in vast bodies throughout most of the cities and capital towns in England, where they built *synagogues*. There were fifteen hundred at York about the year 1180. At Hury in Suffolk is a very complete ruin of a Jewish *synagogue* of stone, in the Norman style, large and magnificent. Hence it was that many of the learned English ecclesiastics of those times became acquainted with their books and language.—*Cruik, History of English Literature*, vol. i. p. 160.

Synalépha. s. [Gr. συναλόφω.] Contraction or excision of a syllable in a Latin verse, by joining together two vowels in the scanning or cutting off the ending vowel: (as, *ill' ego*).

Virgil, though smooth, is far from affecting it: he frequently uses *synalépha*, and concludes his sense in the middle of his verse.—*Dryden*.

Synarchy. s. [Gr. συναρχία.] Joint sovereignty.

The *synarchies* or joint reigns of father and son have rendered the chronology a little difficult.—*Blackmore, History of the Bible*.

Synarthrosis. s. [Gr. σύνθρονος = joint.] Close conjunction of two bones.

There is a conspicuous motion where the conjunction is called diarthrosis, as in the elbow; an obscure one, where the conjunction is called *synarthrosis*, as in the joining of the carpus to the metacarpus.—*Wise, Surgery*.

Synaxis. s. [Gr. συνίγω = I lead, bring together.] Meeting of persons; congregation.

They celebrated their *synaxes* and communions in groves and retirement.—*Jeremy Taylor, Sermons*, p. 290; 1651.

Synecategorematic. s. See extract.

Categoris is, in the first instance, an Accusation, the language from which it is derived being the Greek. To 'accuse' is 'to charge with'—to impute to—'to attach a certain character,' or even 'a characteristic'—'to mark'—'to delineate'—to place in a class. Hence, Category comes to mean 'class,' there or thereabouts. A word which can, by itself, form a term is called *Categorematic*. A word which cannot, by itself, form a term, but can, by itself, form a part of one, is called *Synecategorematic*—syn = with, and implying union or conjunction with other words. A word which, by itself, can form a term and something more (as predicate, for instance, and a copula) may be *hypercategorematic*—hyper = over and implying excess. . . . *Categorematic* words are either nouns or pronouns. . . . *Categorematic* words by themselves and single-handed, can form terms, i.e. either subjects or predicates or both. *Hypercategorematic* words are verbs. They can form, by themselves and single-handed, predicates and copulas at once. *Synecategorematic* words are adverbs and prepositions; to which add articles.—*Dr. R. G. Latham, Logic as applied to Language*, § 107.

Synchondrosis. s. [Gr. σύν + χονδρος = cartilage.] See extract.

Synchondrosis is an union by gristles of the vertebra to the ribs.—*Wise, Surgery*.

Synchoron. adj. [Gr. σύν + χρόνος.] Synchoronic; synchorous.

That glorious estate of the church, which is *synchoron* to the second and third thunder.—*Dr. H. More, Exposition of the Epistles sent to the Seven Churches*, p. 141.

The things, that are found to be *synchoron*, have also a natural connexion and complication one with another.—*Dr. H. More, Mystery of Godliness*, p. 182.

Synchoron. s. That which happens at the same time, or belongs to the same time, with another thing.

The near cognation and colligation of those seven *synchorons* that are contemporary to the six first trumpets.—*Dr. H. More, Mystery of Godliness*, p. 182.

Synchoron. adj. Happening together at the same time.

It is difficult to make out how the air is conveyed into the left ventricle of the heart, the systole and diastole of the heart and lungs being far from *synchoron*.—*Boyle*.

Synchorism. s. Concurrence of events happening at the same time.

The coherence and *synchorism* of all the parts of the Mosal chronology, after the Flood, bear a most regular testimony to the truth of his history.—*Sir M. Hale*.

Synchorism. v. n. Concur at the same time; agree in regard to the same time.

The most genuine sense to me, is to *synchorism* with the history of that time wherein John lived.—*Dr. Robinson, Hudibras*, p. 101; 1658.

With this coin ends the series of unframed Icelandic coins; I must, however, caution the reader against supposing that there is the slightest attempt at chronological arrangement in the plate just described. There are not at present any facts known on which to base such an arrangement; and all that can be said is, that coins of the types Nos. 1–11 have been found in hoards which also contained inscribed coins, such as are comprised in the preceding plate, which, therefore, these auspicious coins probably *synchorism*.—*J. Evans, The Coins of the Ancient Britons*, p. 463.

Synchorous. adj. Happening at the same time.

The variations of the gravity of the air keep both the solids and fluids in an oscillatory motion, *synchorous* and proportional to their changes.—*Arbutnot, On the Effects of Air on Human Bodies*.

Hence the murmur, which is one to the ear, may be two in fact. The two are made one by being both *synchorous* with the systole of the ventricle. In this case the murmur from the aortic orifice is direct, and that from the mitral is receding. Or the murmurs thus conveyed in different directions, as they are two in fact, may be two to the ear. But then one must be *synchorous* with the diastole, the other with the systole of the heart.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*, lect. ii.

Synchysis. s. [Gr. χύω = I pour out; χύσις = pouring out. Compare with Lat. fundo = I pour out, pass. part. fusus; fusio, -onis; and *synchysis* and *con-fusio* translate one another.] Confusion; confused arrangement of words in a sentence.

The English translator hath expressed the sense, but not translated strictly to the words, by *synchysis* and involved and perplexed trajecting being not well distinguished.—*Knatchbull, Annotations on the New Testament*, p. 133.

Syncope. v. a. Contract; abbreviate, by taking from the middle of a word. *Rare*.

Syncope. s. Syncope.

Syncope. s. [Gr. σνκοπή.]

1. In *Medicine*. Fainting fit.

The symptoms attending gunshot wounds are pain, fever, delirium, and *syncope*.—*Wise, Surgery*.

Alas for Sicily! rude fragments now lie scattered, where the stately column stood. Her palaces are dust. In all her streets The voices of singing and the sprightly chord are silent. Bawling, and dance, and show, suffer a *syncope* and solemn pause; While God performs upon the trembling stage Of his own works his dreadful part alone. *Cowper, Task, Time-piece*.

2. In *Grammar*. Contraction of a word by cutting off a part in the middle.

3. In *Music*. Division of a note, used when two or more notes of one part answer to a single one of the other.

Syncope. s. Contractor of words. *Rare*. To outline all the modern *syncope*, and thoroughly content my English readers, I intend to publish a *syncope* that shall not have a single vowel in it.—*Spectator*.

synopsine. *v. a.* Contract; abridge. *Rare.*

Whether to ascribe this to some modish affectation of times and humours, or more particularly to a poetical humour of *synopsizing* and contracting their words.—*Delgarno, Deaf and Dumb Man's Tutor*, p. 114: 1680.

syncretism. *s.* [Gr. *σπᾶν*=mixture.] See third extract.

They may, both alike, be symptoms of the same predominant disposition to that coalition-system in Christianity, for the expression of which theologians have invented or appropriated the term *syncretism*.—*S. T. Coderidge, Second Lay Sermon*, p. 388: 1834.

The true gospel spirit of toleration we should regard as a matron, a kind and gentle guardian indeed of the pure doctrine, but sedulous, but vigilant, but impatient of seducers. This *syncretism*, on the contrary, which the Laodiceans among us join in extolling so highly, shall nowhere hear from me other or better name than that of harlot, the offspring of a belief either foolish or ignorant of its own condition, and then the parent of worldly-mindedness, and with whom therefore neither sincere faith nor genuine charity will endure to associate.—*Id., Translation of Clementia Keangetica*, note.

What seems most his own (L. Bruner's), and I must speak very doubtfully as to this, is the *syncretism* of the talent of a prevailing spirit, an 'anima mundi,' which is itself an imperfect theism, with the more pernicious hypothesis of an universal mind, to which every distinct attribute, except unity, was to be denied.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, vol. i. p. 13: 1845.

synodus. *s.* Magistrate.

May it please you, that Dr. Gunning and Dr. Pearson may use your legal *synodica* for you, and in your name, to treat and conclude with the said archbishop concerning his and your right and interest in the said books.—*Grace in the Senate of the University of Cambridge*, July 22, 1662.

Ramsay . . . inquired his way to the Golden Street, in which resided Myshoe Van Krause, *synode* of the town, and to whom he had obtained his principal letters of introduction. The *synode's* house was too well known not to be immediately pointed out to him.—*Marrgat, Sharleypoon*, vol. ii. ch. viii.

synodome. *s.* [Gr. *συνήγορος*.] Concurrent action; concurrence.

All things being linked together by an uninterrupted chain of causes, every single motion owes a dependence on such a *synodome* of pre-required motions.—*Glanville, Neptune's Scientifica*.

synodoche. *s.* [Gr. *συνδοχή*.] Figure by which part is taken for the whole, or the whole for part.

synodocheical. *adj.* Expressed by a *synodoche*; implying a *synodoche*.

Should I, Lindamer, bring you into hospitals, and show you there how many souls narrowly lodged in *synodocheical* bodies, see their earthen cottages moulder away to dust, those miserable persons, by the loss of one limb after another, surviving but part of themselves, and living to see themselves dead and buried by piecemeal?—*Boyle, Seraphick Love*.

synodocheically. *adv.* In a *synodocheical* manner; according to a *synodocheical* way of speaking.

Thus did our Saviour rise from the dead on the third day properly; and was three days and three nights in the earth *synodocheically*.—*Bishop Pearson, Exposition of 1's Creed*, article v.

synodite. *s.* Office, state, or jurisdiction of a *synodic*.

synodite. *v. a.* Judge. *Rare.*

Some men must be intimidated and *synodited* with commissions, before they will deliver the fruits of justice.—*Bonno, Devotions*, p. 476.

synodism. *s.* Judgment.

Powers of search and *synodism* may retain officers within compass of their duty.—*Time's Store-house*, p. 361. (Ord MS.)

synopsis. *s.* [Gr.] In *Prosody*. Confluence of two syllables, originally separate, into one.

'Nor e'er would'—Aldus reads it 'ever would'; but as this would hurt the metre, we have restored it to the genuine reading, by observing that *synopsis* which had been neglected by ignorant transcribers.—*Addison, Spectator*, no. 476. (Ord MS.)

synergist. *s.* [Gr. *ἵππον*=work.] See extract.

Melanchthon . . . was suspected [of having introduced] a doctrine said to be nearly similar to that called Semi-Pelagian, according to which, grace communicated to adult persons so as to draw them to God required a corresponding action of their own freewill in order to become effectual. Those who held this tenet were called *synergists*. It appears to have been the same, or nearly so, as that adopted by the Arminians in the next century.—*Hallam, Introduction to the Literature of Europe during the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. ii.

synergistical. *adj.* Co-operating.

Luther's notions of the irresistible decrees, which he afterwards published in his book 'De servo arbitrio,' shocked both parties, and roused a kind of revolution on all sides. The papists raised an outcry against their own doctrine, when expressed in so ungarded a manner; and the Saxon divines, with Melanchthon at their head, silently withdrew themselves from their master Luther in this point; and struck out, or rather adopted, another system, viz. the *synergistical*. On this system of the co-operation of grace and free-will, the Augustan Confession is wholly built.—*Dean Tucker, Apology for the Church of England*, p. 60: 1772.

synneurisis. *s.* [Gr. *σύνειρος*=nerve.] See extract.

Synneurisis is when the connexion is made by a ligament. Of this in *synphysia* we find instances, in the reunion of the ossa pubis together, especially in women, by a ligamentous substance. In articulation, it is either round, as that which unites the head of the os femoris to the coxa; or broad, as the tendon of the patella, which unites it to the os tibia.—*Wiseman, Surgery*.

synod. *s.* [Gr. *σύνδος*; Lat. *synodus*.]

1. Assembly called for consultation: (it is used particularly of ecclesiastics).

The glorious gods sit in hourly *synod* about thy particular prosperity.—*Shakespeare, Coriolanus*, v. 2.

Since the mortal and intestine jars 'Twixt thy ambitious countrymen and us, It hath in solemn *synod* been decreed, To admit no traffic to our adverse towns.

Id., Comedy of Errors, i. 1.

The opinion was not only condemned by the *synod*, but imputed to the emperor as extreme madness.—*Bacon*.

Plea-bitten *synod*, an assembly brew'd Of clerks and elders and, like the rude Chaos of proph'try, where laymen guide With the tame woolpack clergy by their side.

His royal majesty, according to these Presbyterian rules, shall have no power to command his clergy to keep a national *synod*.—*White*.

We'll have ye judged, well ruled lung debate, *Synod* of gods! and, like to what ye are, Great things resolved.

Milton, Paradise Lost, li. 380.

The second council of Nice, he saith, I most irreverently call that wise *synod*; upon which he falls into a very tragical *synodus*; that I should dare to reflect so much dishonour on a council.—*Bishop Stillingfleet*.

Parvnt of gods and men, propitious Jove! And you, bright *synod* of the powers above, On this my son your gracious gifts bestow.—*Dryden*.

2. Conjunction of the heavenly bodies.

How'er love's native hours are set, Whatever starry *synod* met, 'Tis in the mercy of her eye, If poor love shall live or die.

Their planetary motions and aspects Of noxious efficacy, and when to join In *synod* unbenign.—*Milton, Paradise Lost*, x. 626.

As the planets and stars have, according to astrologers, in their great *synods*, or conjunctions, much more powerful influences on the air than are ascribed to one or two of them out of that aspect; so divers particulars, which, whilst they lay scattered among the writings of several authors were inconsiderable, when they come to be laid together, may oftentimes prove highly useful to physiology in their conjunctions.—*Boyle*.

synodal. *s.* Money paid anciently to the bishop, &c. at Easter visitation.

Synodals were (anciently) the publication or recital of the provincial constitutions in the parish churches.—*Whately, Rational Illustration of the Book of Common Prayer*, ch. iii. § 10.

The *synodals* to the bishop at Easter, is two shillings.—*T. Warton, History of the Parish of Kidlington*, p. 2.

synodal. *adj.* Synodic. *Rare.*

The authority of some *synodal* canons.—*Milton*.

synodic. *adj.* reckoned from one conjunction with the sun to another.

The diurnal and annual revolutions of the sun to us are the measures of day and year; and the *synodic* revolution of the moon measures the month.—*Holder*.

synodical. *adj.*

1. Relating to a synod; transacted in a synod.

The various dignity of their several churches, and of their many functions, rules, and orders in them, by reason of the frequency of their *synodical* and processional meetings, have necessarily raised many questions of place among them.—*Steu*.

St. Athanasius writes a *synodical* epistle to those of Antioch, to compose the differences among them upon the ordination of Eudimus.—*Impp Stillingfleet*.

2. In *Astronomy*. Connected with the conjunction of heavenly bodies.

The moon makes its *synodical* motion about the earth in twenty-nine days twelve hours and about forty-four minutes.—*Locke, Elements of Natural Philosophy*.

The lunar month is determined by the recurrence of its phases; it reckons from new moon to new moon; that is, from leaving its conjunction with the sun to its return to conjunction. If the sun stood still, like a fixed star, the interval between two conjunctions would be the same as the period of the moon's sidereal revolution; but, as the sun apparently advances in the heavens in the same direction with the moon, only slower, the latter has more than a complete sidereal period to perform to come up with the sun again, and will require for it a longer time, which is the lunar month, or, as it is generally termed in astronomy, a *synodical* period. The difference is easily calculated by considering that the superlunars are (whatever it be) is described by the sun with the velocity of 68'853 per diem, in the same time that the moon describes that arc: plus a complete revolution, with her velocity of 13'57616 per diem, and the times of description being identical, the spaces are to each other in the proportion of the velocities.—*Sir J. F. W. Herschel, Outlines on Astronomy*.

synodically. *adv.* In a synodic manner; by the authority of a synod or public assembly.

It shall be needful for those churches *synodically* to determine something in those points.—*Bishop Sanderson*.

The alterations made by the commissioners were brought to the convocation, their sitting where they were *synodically* agreed upon.—*Nelson*.

synonymally. *adj.* Synonymous.

Repetitions here, and doubled sentences, and enlargements by *synonymally* words, &c. before the shutting up of the period, are but necessary.—*Instructions for Oratory*, p. 15: 1682.

synonymally. *adv.* Synonymously; in the way, after the manner of, as an equivalent to, a synonym.

The fifth canon uses *synonymally*.—*Sir H. Spelman*.

synonymon. *s.* [Gr. *ὁνομα*=name.] Name which signifies the same thing with another: (Massinger uses it more than once; the Greek plural in *a*, was common in the time of the Elizabethan dramatists).

Every thinker for his think may cry Rogue, bawd, and chawer, call you by the surnames And known *synonyma* of your profession.

B. Jonson, New Inn.

synonyme. *s.* Word of the same meaning as some other word.

Most *synonymes* have some minute distinction.—*Reid*.

To interpret a language by itself is very difficult; many words cannot be explained by *synonymes*, because the idea signified by them has not more than one appellation; nor by paraphrase, because simple ideas cannot be described.—*Johnson, Preface to Dictionary*.

They could hardly be restrained from inflicting summary punishment on the few who still dared openly to question his title. Jacobite was now a *synonym* for enthusiasm.—*Macaulay, History of England*, ch. xxi.

God forbid that the time should ever come when [we] shall esteem riches the *synonym* of good.—*Carlyle, Critical and Miscellaneous Essays, State of German Literature*.

synonymize. *v. a.* Express the same thing in different words.

This word fortis we may *synonymize* after all these fashions, stout, hardy, valiant, doughty, courageous, adventurous, brave, bold, daring, intrepid.—*Candor, Romance*.

Synonymus. *adj.* Expressing the same thing by different words; having the same signification; univocal.

These words consist of two propositions, which are not distinct in sense, but one and the same thing variously expressed; for wisdom and understanding are synonymous words here.—*Archbishop Tillotson.*

Fortune is but a synonymous word for nature and necessity.—*Bentley, Sermon.*

When two or more words signify the same thing, as wave and billow, mead and meadow, they are usually called *synonymous* words.—*Watts, Logic.*

First of parallel lines *synonymous*; that is, which correspond one to another by expressing the same sense in different but equivalent terms; when a proposition is delivered and is immediately repeated in the whole or in part, the expression being varied, but the sense entirely or nearly the same; as,
O Jehovah, in thy strength the king shall rejoice;

And in thy salvation how greatly shall he call!

The desire of his heart thou hast granted unto him;

And the request of his lips thou hast not denied.

(Psalm xxi. 1, 2.)

—*Bishop Lowth, Translation of Isaiah, Preliminary Dissertation.*

No other term can be found in our language which conveys precisely the same notion, and to this notion it is now so exclusively appropriated, that its literal import is seldom thought of. To use the word synonymously, in prose composition, as synonymous with altitude or height would be affectation and pedantry.—*Ingold Street.*

Which we are told that the Arabians had four-score words to signify Honey, two hundred a Serpent, five hundred a Lion, a thousand a Sword, and to illustrate each of which whole treatises were composed, I must be allowed to withhold my assent from the philological prodigy. When a language is perplexed with *synonymous* words, these are known to have arisen from an intercourse with other nations, caused by conquest or by commerce; but it is said that the Arabians were never subjugated, and they lived in a state of independent seclusion.—*Berkington, Literature of the Middle Ages, appendix II.*

Cosmo of Medice was the father of a line of princes whose name and age are almost *synonymous* with the restoration of learning.—*Crack, History of English Literature, vol. i. p. 338.*

Synonymously. *adv.* In a synonymous manner.

It is often used *synonymously* with words which signify any kind of production or formation.—*Bishop Pearson, Exposition of the Creed, art. 1.*

Synonymy. *s.* Quality of expressing by different words the same thing.

We having three rivers of note, *synonymy* with her.—*Idem, Notes on Dryden's Polydorus, song II.*

Synopsis. *s.* [Gr. *σύνωψις*.] General view; all the parts brought under one view.

Breviaries, *synopses*, and other blotting gear.—*Milton, Areopagitica.*

He who reads the inscrutable book of Nature as if it were a merchant's ledger, is justly suspected of having never seen that book, but only some school *synopsis* thereof: from which, if taken from the real book, more error than insight is to be derived.—*Carlyle, Critical and Miscellaneous Essays, On History.*

Synoptical. *adj.* Affording a view of many parts at once.

We have collected so many *synoptical* tables, calculated for his monthly use.—*Kerley, Kalendar.*

Synoptically. *adv.* In a synoptical manner.

I shall more *synoptically* here insert a catalogue of all dying materials.—*Sir W. Petty, in Bishop Sprat's History of the Royal Society, p. 256.*

Synostosis. *s.* [Gr. *σύνωσις* = bone.] In *Anatomy*. Junction of bones.

Synostotic. *adj.* Having the character of a synostosis: (in the extract, one resulting from the obliteration of sutures, and the confluence of two or more bones into one).

Synostotic and artificially deformed skulls are mostly included, for the reason specified, that their internal capacities are usually not materially interfered with.—*Dr. J. B. Davis, On the Weight of the Brain in the Different Races of Men, Proceedings of the Royal Society, January 23, 1868.*

Synovia. *s.* [Gr. *σύν* + Lat. *ovum* = egg, a non-classical and hybrid word.] In *Anatomy*. Joint-oil.

Synovia is that fluid which exists within the membrane lining joints, to assist motion by lubrication; as also in the bones. . . . *Synovia* was chemically examined by Marsson. The specimen he analysed was viscid, and became gelatinous soon after it was obtained. It then deposited a fibrous matter and became clear above. . . . *Synovia* has, of

late years, been examined by Jahn. It is described as a viscid, transparent, yellowish or reddish fluid, resembling in its colour the serum of the blood.—*Dr. Owen Rees in Todd's Cyclopædia of Anatomy and Physiology.*

Synovial. *adj.* Having the character of, constituted by, synovia.

It is a matter of no small interest to consider how far the results of peculiar mechanical conditions are modified by variations in the character of lubricating fluids, knowing, as we do, that, while the ventricles of the brain, subject to agitation only, contain no alignment in their lubricating fluid, the liquor of the pericardium contains that principle in abundance; and that in the *synovial* fluid, adapted to the lubrication of the joints, we have in addition to albumen, not only a considerable proportion of phosphate of lime, but probably fibrin also, as a necessary constituent.—*Dr. Owen Rees, in Todd's Cyclopædia of Anatomy and Physiology.*

Synovial membranes, especially that of the knee-joint, are furnished with little fringe-like projections, which are extremely vascular, and which seem especially concerned in the secretion of the *synovial* fluid. The fluid of the various cavities is so nearly the same as the serum of the blood, that the simple act of transudation is sufficient to account for its presence in their sacs; on the other hand, that of the *synovial* capsules, and of the bursa minora which resemble them, may be considered as serum with from 6 to 8 per cent. of additional albumen.—*Dr. Carpenter, Principles of Physiology, General and Comparative, § 167: 1861.*

Syntactical. *adj.*

1. Conjoined; fitted to each other.

2. Relating to the construction of speech.

A figure is divided into tropes, &c. grammatical, orthographical, *syntactical*. *Peacock, Garden of Eloquence, sign. B. i. p. 157.*

The various *syntactical* structures occurring in the examples have been carefully noted; the licence or negligence with which many words have been hitherto used, has made our stile capricious and indeterminate; when the different combinations of the same word are exhibited together, the preference is readily given to propriety, and I have often endeavoured to direct the choice.—*Johnson, Preface to Dictionary.*

Syntax. *s.* [Gr. *τάξις* = arrangement, order; *τάσσω, τάρτω* = I arrange, dispose; second aorist, *ἔταξον*.]

1. System; number of things joined together.

They owe no other dependence to the first than what is common to the whole *syntax* of beings.—*Glasse, &c.*

2. Part of grammar which teaches the construction of words.

I can produce a hundred instances to convince any reasonable man that they do not so much as understand common grammar and *syntax*.—*Swift.*

Syntaxis. *s.* Greek form of Syntax.

Words . . . have no power, save with dull grammarians.

Whose souls are taught but a *syntaxis* of them.

B. Jonson, Magnetic Lady.

Synteresis. *s.* [Gr. *σύντηξις* = I watch, am anxious.] Remark of conscience.

Though the principles of *synteresis*, the seeds of piety and virtue, scattered and disseminated in the soul, to bring forth the fruit of virtue and felicity, may be trampled on and kept under, cropped and snubbed, by the besetting passions, they will sometimes be starting out, sprouting, and putting forth themselves.—*Bishop Ward, Sermon on the 30th of January, p. 13: 1671.*

Synthesis. *s.* [Gr. *σύνθεσις*; approximately translated by composition (*cum + pono*), and construction (*cum + struo*), its opposite being analysis or dissolution (Gr. *ἀνὰ + λύω*; Lat. *dis + solvo*), the two words translating each other.] Applied chiefly to the mode of treating certain scientific subjects, i.e. by beginning with the elements and constructing a system, analysis implying a system already formed, but which is taken to pieces. Every subject has its analytic and synthetic aspect; in some, however, one is so much more prominent than the other, that the generality of the correlation is overlooked.

The *synthesis* consists in assuming the causes discovered and established as principles, and by their explaining the phenomena proceeding from them, and proving the explanations.—*Sir I. Newton, On Optics.*

Synthesis has been the favourite method with philosophers since philosophy began. It is a method

planning and wonderfully akin to the human mind; it enables the philosopher to indulge his own tastes, assume the principles he likes, and proclaim them as truths. Should anything adverse in experience arise, *synthesis* easily pushes it away, represses, or removes it. We are easily beguiled into the ideal games of *synthesis*; the race is easy. We fix one goal and bound between it and the starting-place.—*R. Swedenborg, Animal Kingdom, translated by W. White.*

Synthesis is a Greek word which signifies combination, and is applied to the chemical action which unites dissimilar bodies into a uniform compound; as sulphuric acid and lime, into gypsum; or chlorine and sodium into culinary salt.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The want of a clear notion respecting the nature of reason may be traced to the difficulty of combining the notion of the organ of sense, or a new sense, with the notion of the appropriate and peculiar objects of that sense, so that the idea evolved from this *synthesis* shall be the identity of both.—*Colebridge, Lay Sermon, Appendix B, note: 1858.*

The idea of affinity, as already explained, implies a disposition to combine. But this combination is to be understood as admitting also of a possibility of separation. *Synthesis* implies analysis as conceivable; or to recur to the image which we have already used, divorce is possible when the marriage has taken place.—*Whewell, History of Scientific Ideas, II. 10.*

Each of the words *idea*, *In Mind*, involves a *synthesis*, and the proposition—*Ideas exist in mind*, is a *synthesis of synthesis*. Passing from the assumption of idealism to its argument, it might be shown that each of its syllogisms is a *synthesis of synthesis*; and that its conclusion, reached by putting together many syllogisms, is a *synthesis of synthesis of synthesis*. Instead, then, of the realistic belief being objectionable on the ground of its synthetic nature, its superiority is, that it is less open to this objection than any other belief which can be framed.—*Bertr. Spencer, Principles of Psychology.*

Synthetic. *adj.* Constructive: (opposed to analytic. For its import in *Metaphysics* see extracts under *Syntactical*).

Synthetic method is that which begins with the parts, and leads onward to the knowledge of the whole; it begins with the most simple principles and general truths, and proceeds by degrees to that which is drawn from them or compounded of them; and therefore it is called the method of composition.—*Watts, Logic.*

The third sort of parallel I call *synthetic* or constructive: where the parallelism consists only in the similar form of construction; in which word does not answer to word, and sentence to sentence, as equivalent or opposite; but there is a correspondence and equality between different propositions, in respect of the shape and turn of the whole sentence, and of the constructive parts—such as noun answering to noun, verb to verb, member to member, negative to negative, interrogative to interrogative.—*Bishop Lowth, Translation of Isaiah, Preface.*

Synthetical. *adj.* Synthetic.

The fact is this; the category of causality includes the notion of a subject with two equal states, "an opposition of which time is the only solvent, so that time is presumed as the condition of its coexistence. By time, then, the communion of these states is rendered cogitable, and the resulting principle is therefore *synthetical*."—*Uphoff, An Introduction to Metaphysic, II. div. II. § 135.*

In all judgments wherein the relationship of a subject to a predicate is thought (if I only consider the affirmative, as the application to the negative is afterwards easy), this relationship is possible in two ways. Either the predicate B belongs to the subject A, as something which is contained in the conception A (in a covert manner), or B lies completely out of the conception A, although it stands in connexion with it. In the first case, I name the judgment *analytical*; in the other *synthetical*. Analytical judgments (the affirmative) are consequently those in which is conceived the connexion of the predicate with the subject, through identity; but those in which this connexion is conceived, without identity, should be named *synthetical* judgments. We might name the first also explicative, the other extending judgments, since the former add, by means of the predicate, nothing to the conception of the subject; but only through analysis divide this into its constituent conceptions, which were thought already in the same (although confusedly); while, on the contrary, the latter add a predicate to the conception of the subject which was never at all thought in it, and which through no analysis of the same could have been deduced. For example: 'All bodies are extended in an analytical judgment.' For I need not go out beyond the conception which I unite with body in order to find extension connected with it; but I only have to analyze the conception, that is, I only have to be acquainted with the diversity which I at all times think in it (the conception), therein to find this predicate. It is, therefore, an analytical judgment. On the contrary, when I say, 'All bodies are heavy'; this predicate is something quite other than that which I think in the mere conception of a body in general. The addition of such a predicate consequently gives a *synthetical*

Judgment. Judgments of experience, as such, are all *synthetic*. For it were absurd to ground an analytical judgment upon experience; because I need not at all go out of my conception to form the judgment, and, consequently, I have no testimony of experience necessary for this purpose.—*Kant's Critique of Pure Reason*, translated by F. Haywood, Introduction, p. iv.

Synthetically, *adv.* In a synthetic manner; by synthesis.

The plan proceeds *synthetically* from parts to the whole.—*Walker*.

Syphilis. *s.* [?] Venereal disease.

Next to influenza, great destruction was caused by *syphilis*, constantly imported by 15,000 or 20,000 seamen, chiefly winters, who landed in Honolulu and Lahaina. . . . Small-pox, also, caused great devastation in the interior, as we have seen in the measles and *syphilis*.—(Cullingworth, *Translation of Waits, Anthropology*, pt. i. s. ii.)

Syphilitic. *adj.* Connected with, relating to, constituted by, the venereal disease.

Syphilization. *s.* In *Medicine*. Inoculation of syphilitic matter: (a new name for a new doctrine).

Syphon. *s.* See Siphon.

Syracusan. *s.* Syriac phrase, or expression. The New Testament, though it be said originally writ in Greek, yet hath nothing near so many Atticisms as Hieronymus and *Syracusan*.—*Milton, Tetrachordon*. (1st Ed.)

Syringa. *s.* In *Botany*. Generic name for the class to which the lilac (*Syringa vulgaris*) belongs; applied, as a popular name, to the *Philadelphus coronarius*.

Shrub there are
Of bolder growth, that, at the call of Spring,
Burst forth in blossomed fragrance; lilacs robed
In snow-white innocence, or purple pride;
The *sy-* & *syringus*, yielding but in accent
To the rich orange.
Mason, The English Garden, iii. 144.

Syringe. *s.* [Gr. *σῆμα* = reed, pipe.] Instrument through which any liquor is squirted.

The heart seems not designed to be the fountain or conservatory of the vital flame, but as a machine to receive the blood from the veins, and force it out by the arteries through the whole body as a *syringe* doth any liquor, though not by the same artifice.—*Ray*.

Syringe. *v. a.* Spout by a syringe. A flux of blood from the nose, mouth, and eye, was stopped by the *syringing* up of oxycerate.—*Wise-man, Surgery*.

Syrta. *s.* Syrtis. *Rare*.

The shattered mast,
The *syrta*, the whirlpool and the rock. *Young*.

Syrtis. *s.* [Gr. *σῆμα*; Lat. *syrtis*; a proper, rather than a common, name, denoting certain quicksands on the north coast of Africa.] Quicksand.

A boggy *syrtis*—neither sea
Nor good dry land. *Milton, Paradise Lost*, ii. 330.

Syrup. *s.* [Fr. *sirup*; Lat. *syrupus*; Italian, *siroppo*; Spanish, *jurabe*; from the Arabic root of *sherbet* and *shrub*.] Juice of vegetables boiled with sugar.

Small I, whose ears her mournful words did seize,
Her words in *syrup* laid of sweetest breath.
Belent? *Sir P. Sidney*.

Not poppy, nor mandragora,
Nor all the drowsy *syrups* of the world,
Shall ever med'cine thee to that sweet sleep,
Which thou owed'st yesterday. *Shakespeare, Othello*, iii. 3.

And first, behold this cortical julep I ere,
That flames and dances in his crystal bounds.
With spirits of balm, and fragrant *syrups* mixt.
Milton, Comus, 672.

Those expressed juices contain the true essential salt of the plant; for if they be boiled into the consistence of a *syrup*, and set in a cool place, the essential salt of the plant will shoot up on the sides of the vessels.—*Arbuthnot*.

Syrup is a solution of sugar in water. Cane-julep, concentrated to a density of 1300, forms a *syrup* which does not ferment in the transport home from the West Indies, and may be boiled and redistilled at one step into superior sugar-loaves, with eminent advantage to the planter, the refiner, and the revenue.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

The criterion by which the negro boilers judge of the concentration of the *syrup* in the touch, is difficult to describe, and depends almost entirely on the sagacity and experience of the individual. Some of them judge by the appearance of the incipient grain on the back of the cooling ladle; but most

decide by 'the touch,' that is, the feel and appearance of a drop of the *syrup* (crowed and then drawn into a thread between the thumb and fore-finger. The thread eventually breaks at a certain limit of extension, shrinking from the thumb in the suspended finger, in length somewhat proportional to the insipidity of the *syrup*.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Syruped. *adj.* Sweet, like syrup; bedewed with sweets.

Yet, when there happens a honey fall,
We'll lick the *syrup* leaves:
And tell the bees that theirs is gall. *Dragon*.

Syrupy. *adj.* Resembling syrup.

Apple-aro of a *syrupy* tenacious nature.—*Mortimer, Husbandry*.

Systasis. *s.* [Gr. *συστάσις*.] Consistence of anything; constitution.

It is a worse preservative of a general constitution than the *systasis* of Crete, or the constitution of Poland, or any other ill-derived corrective which has yet been introduced in the necessities produced by an ill-constructed system of government.—*Barke, Reflections on the Revolution in France*.

Sytem. *s.* [Fr. *système*; Gr. *συστήμι*.]

1. Complexure or combination of many things acting together.
2. Scheme which reduces many things to regular dependence or co-operation.
3. Scheme which unites many things in order.

He presently brought a *system* of divinity, with design to apply himself straightway to that study.—*Bishop Fell, Life of Hammond*.

Aristotle brings civility into *system*, by treating of happiness under heads, and ranges it in classes according to its different objects, distinguishing virtues into their several kinds, which had not been handled systematically before.—*Baker*.

The best way to learn any science is to begin with a regular *system*, or a short and plain scheme of that science well drawn up into a narrow compass.—*Watts*.

System-maker. *s.* One who forms systems.

We *system-makers* can sustain
The thesis, which you grant was plain.
Prior, Alma, iii. 330.

System-monger. *s.* One fond of framing systems.

A *system-monger*, who, without knowing any thing of the world by experience, has formed a system of it in his dusty cell, lays it down, that flattery is pleasing.—*Lord Chesterfield*.

Systematic. *adj.* Systematical?

The phenomenal portions of each science imply classification, for no description of a large and varied mass of phenomena can be useful or intelligible without classification. A representation of phenomena, in order to answer the purposes of science, must be *systematic*. Accordingly, in giving the History of Inverity or Phenomenal Geology, I have called it *Systematic Geology*, just as *Classificatory Botany* is termed *Systematic Botany*. . . . In the history, I have pointed out Werner, William Smith, and Carver, as the three great authors of the *Systematic Geology of Europe*.—*Whitell, History of Scientific Ideas*, vol. ii. p. 250: 1854.

It is a remarkable evidence of this formative power of the German language, that it should have been able to produce an imitation of the *systematic* chemical nomenclature of the French school, so complete, that it is used in Germany as familiarly as the original system is in France and England.—*Id., Neues Organon Renovatum*, p. 322: 1853.

Systematical. *adj.* Methodical; written or formed with regular subordination of one part to another.

It will be necessary, in a discourse about the formation of the world, to give you a brief account of some of the most principal and *systematical* phenomena that occur in it. *Julius*.

Now we deal much in *ways*, and unreasonably despise *systematical* learning; whereas our fathers had a just value for regularity and systems.—*Watts*.

Systematically. *adv.* In a systematic manner; in form of a system.

I treat of the usefulness of writing books of *ways*, in comparison of that of writing *systematically*.—*Boyle*.

Aristotle brings morality into *system*, and ranges it into classes according to its different objects, distinguishing virtues into their several kinds, which had not been handled systematically before.—*Baker*.

He was accused of using his power *systematically* for the purpose of favouring the enemies and silencing the friends of the Sovereign whose bread he ate.—*Nares, History of England*, ch. ix.

Systematist. *s.* One who reduces things to any kind of system.

Systematists in botany . . . arrange plants into certain orders, classes, or genera.—*Chambers*.

Systematization. *s.* Act of systematizing.

If viewed, analytically, all methods are simply complex intellectual processes. . . . If further, in the several instances above given, methods arose by the *systematization* and deliberate carrying out of mental operations which were before irregularly and unwittingly pursued, may we not fairly infer that all methods arise after this manner?—*Herbert Spencer, Principles of Psychology*, § 107.

Systematize. *v. a.* Reduce to a system.

Diseases were healed, and buildings erected, before medicine and architecture were *systematized* into arts.—*Harris, Philological Inquiry*.

Systematized. *part. adj.* Reduced to a system.

Systematized regicide.—*Burke, Letter on a Regicide Pease*.

Systematizer. *s.* Systematist.

Aristotle may be called the *systematizer* of his master's doctrines.—*Harris, Philological Inquiry*.

Systemic. *adj.* In *Medicine*. See extract.

Systemic is a word applied to designate the circulation of the general system, beginning at the left ventricle and aorta, and ending at the venae cavae and right auricle, as contradistinguished from the circulation through the lungs, which is called pulmonary. They have also been termed the greater and lesser circulations. The parts concerned in these circulations have also received the same names; thus, the left ventricle is called the *systemic* one.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Systole. *s.* [Gr. *συστολή*; *συστάλλω* = I place, or put together; i. e. I contract.] In *Anatomy*. Contraction.

The *systole* resembles the forcible bending of a spring, and the *diastole* its flying out again to its natural size. *Rap*.

Murres has minutely described the circulating system of the earth-worm; in a species of which (*Lumbricus variegatus*) Bonnet saw the red blood propelled forward by the *systole* and *diastole* of the dorsal vessel towards the head, and noticed its accelerated course near that part.—*Owen, Lectures on Comparative Anatomy*, lect. xi.

The following are among the prominent facts which suggested, and taught, and established this doctrine of regulating murmurs. . . . In numerous well-watched cases, where a single murmur, constantly and uniformly coincident with the *systole* of the heart, had been heard during life, the valve at the entrance of the aorta, and this valve only, was found diseased after death. Here the murmur marked the time of the blood passing onward from the ventricle into the aorta, through an orifice only half open, which should be open altogether. This was in murmur of regurgitation. Again, in numerous cases, where a single murmur had been heard during life, but constantly and uniformly coincident with the *diastole* and not with the *systole* of the heart, still this same valve at the entrance of the aorta, and this valve only, was found diseased after death.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*.

Systolic. *adj.* In *Anatomy*. Connected with, relating to, constituted by, the systole.

It has been said, that the aortic orifice of the heart may be the seat of two murmurs, in consequence of disease of its valve; one *systolic*, from the blood in its direct course, the other *diastolic*, from the blood during regurgitation. *Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine, comprising Diseases of the Heart*.

Systyle. *s.* [Gr. *συστύλος* = column, pilhr.] In *Architecture*. Close intercolumniation.

Systyle, one of the five species of intercolumniation defined by Vitruvius. In this the columns are set at a distance equal to twice the diameter of the shaft measured at its lower part, just above the apophyse, or (which is the same thing according to the Vitruvian proportion), the distance between the pilthns is exactly equal to the diameter of the pilthns.—*Glossary of Architecture*.

Syzygy. *s.* [Gr. *σύνζυγία*; from root of *σύνζυγος* = I join; *ζυγός* = yoke.] In *Astronomy*. Conjunction: (the two words being approximate translations of one another; Lat. *con, cum* = with + *jungo* = I join).

With regard to these changes, it is necessary to distinguish three cases, in which the perturbations of planet by planet are very distinct in character. 1st. When the disturbing planet is exterior. In this case there are four neutral points of either force. Those of the tangential force occur at the *syzygies*, and at the points of the disturbed orbit, which we call points of equidistance, equidistant from the sun and the disturbing planet, at which points, as we have shown, the total disturbing force is always directed inwards towards the sun.—*Sir J. Herschel, Outlines of Astronomy*, § 718.

In the joints of some grasses a perfect silicious deposit is found, particularly in a kind of jungle grass mentioned in a letter from Dr. Moore to Dr. Kennedy of Edinburgh. . . . The silicious matter of the bamboo is often secreted at the joints, where it forms a singular substance called *tabasheer*.

It was found by Turner that the *tabasheer* of India consisted of silica containing a minute quantity of lime and vegetable matter.—*Lindley, The Vegetable Kingdom*.

To extend and rack thy veins;
Thy odes first their own harmony did break,
For singing truth is but in tune to speak.

Lovelace, Lucasta Postuma, p. 70.

2. In *Painting*. See extract.

By the word *tablature* we denote (according to the original word *tabula*) work not only different from a mere portraiture, but from all those wilder sorts of painting, which are in a manner absolute and independent: such as painting in fresco upon the walls, the ceilings, the stair-cases, the cupolas, and other remarkable places either of churches or palaces. It is not merely the dimension of a cloth or board, which denominates a piece of *tablature*. 'Tis then, that in painting we may give to any particular work the name of *tablature*, when the work is in reality a single piece, comprehended in one view, and formed according to one single intelligence, meaning, or design.—*Lord Shaftesbury*.

TABUL. *s.* [Fr.; Lat. *tabula*.]

Dryden, Epistle to the Duchess of Ormond, 127.
There are books extant which the atheist must allow of as proper evidence: even the mighty volumes of visible nature, and the everlasting *tabul* of right reason; wherein if they do not willfully shut their eyes, they may read their own folly written by the finger of God in a much plainer and more terrible sentence than Belshazzar's was by the hand upon the wall.—*Hentley, Sermons*.

Among the Romans, the judge or praetor granted administration, not only according to the *tabul* of the testament, but even contrary to those *tabul*.—*Agilffe, Parergon Juris Canonici*.

Turn the *tabul*. Change the condition or fortune of two contending parties: (a metaphor taken from the vicissitude of fortune at gaming-tables).

They that are honest would be afraid knives, if the *tabul* were turned.—*Sir R. L'Estrange*.
If it be thus, the *tabul* would be turned upon me; but I should only fail in my vain attempt.—*Dryden*.

Used *adjectively*, or as the first element in a compound; or, as in *tabul-beer*, which is

two words rather than a true compound and combination.

But how came you to reckon so punctually? Did Anaxias tell us upon the *table-dormant* what year of the persecution of the saints? I wonder you did not rather count it by the shekells; that's the more sanctified coin.—*Cleveland*: 1851. (Nares by H. and W.)

Swift, Miscellaneous.

On these tablets, or *table-books*, Mr. Aske observes that the Greeks and Romans continued the use of waxed *table-books* long after the use of the papyrus, leaves, and skins became common; because they were convenient for correcting extemporaneous composition; from these *table-books* they transcribed their performances correctly into parchment books, if for their own private use; but if for sale, or for the library, the 'librarian' or scribe, forwarded the office. The writing on *table-books* is particularly recommended by Quintilian. . . . Some of these *table-books* are conjectured to have been large, and perhaps heavy, for in Plautus a school-boy is represented breaking his master's head with his *table-book*.—*J. Tableland. s. Tract of country at once elevated and level; plateau.

Of *table-lands* some are nearly level for great distances, but others undulate, and occasionally they form the basis of lofty mountain chains. In Europe the *table-land* is peninsular. In Asia it chiefly extends north of the mountain chain. In Africa there are tracts of high land of the nature of plateaux ranging round the coast from Abyssinia to the Cape, and again from the Cape to near the equator. In America the chief *table-lands* are amongst the mountains. Australia has very little *table-land*.—*A. Nafed, in Brande and Cox, Dictionary of Science, Literature, and Art.*

His [Mataire's] book of the dialects is a sad heap

of confusion: the only way to write on them is to *tabulate* them with index, added at the bottom of the page, and reference.—*Dr. Johnson, in Boswell's Life.*

It was remarked by Niebuhr, in his History of Rome, that, 'according to the chronology of Fabius, the history from the founding to the taking of the city divides itself into two portions, 210 years under the kings, and 120 after them, or 330 years in all; the first part of the task was to *tabulate* the kings; and as these were seven in number, this was done by making the middle of the reign of the fourth king coincide with the middle of the whole period of twenty-four years assigned to all seven. To this king a reign of twenty-three years was given, because twenty-three, together with seventy-seven audited (as being what was called the *lunar year*) to Romulus and Numa, make exactly 100, and because 132, the year in which his reign was thus made to close, was the number of the astronomical years in a *sic*. This chronology Niebuhr pronounces to be throughout 'a forgery and a fiction.' A fabrication of a similar kind, though far less complicated and ingenious, is found in the chronology of the *Æneid*, or founders of the kingdom of Kent, in which the events take place in an eight times repeated cycle of eight years, the *derogator* of the Greeks.—*Cox, in Brande and Cox, Dictionary of Science, Literature, and Art.*

2. Shape with a flat surface.

Tabulation. s. Constructive chronology.

See extract.

Tabulation of chronology; the arrangement of historical or professedly historical events according to their real or supposed dates is sometimes spoken of under this name. . . . In no case can a *tabulation* be of the slightest worth so long as it rests on mere conjecture or ingenious hypothesis apart from all contemporary evidence.—*Cox, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Tacamahac, and Tacamahaca. s. In *Botany*. Secretion from the leaf-buds of the poplar and other trees; secretions of similar character. The name is sometimes given to the tree; e.g. the Tacamahac, or Tacamahac-tree.

Poplar buds, especially those of the *Populus nigra*, *bahamifera*, and *candicans*, are besmeared in winter with a resinous, balsamic, bitter, aromatic exudation, which, under the name of *tacamahac*, is said to be diuretic and antiscorbutic; they are also formed into an ointment for tumours, wounds, and burns, and are the basis of a balsam and tincture used for colic. &c.—*Lindley, The Vegetable Kingdom.*

The seeds of *Calophyllum inophyllum* yield an oil, and a resin exudes from the roots, which is supposed by some authors to be the same as the *Tacamahaca* of the Isle of Bourbon. The true East India *Tacamahaca* is produced by *C. calais*; and *Mayana* resin is referred to the same species.—*Ibid.*

Tacamahac [is] a balsamic bitter resin, different varieties of which are attributed to *Leuca Tacamahaca*, to *Elaphrium tomentum*, and to *Calophyllum inophyllum*. Tachometer. s. [Gr. *taich* = speed + *metron*

= measure.] See extract.

Tachometer . . . [is] a contrivance for the purpose of measuring the velocity of a moving body. When a vessel containing a fluid is whirled rapidly round a vertical axis, the centrifugal force produced by the whirling motion causes the fluid to recede from the axis, and to rise on the sides of the vessel, so that the surface of the fluid assumes a concave parabolic form; and the distance to which the centre of the surface falls below its original level is proportionate to the velocity of rotation, and is subject to corre-

sponding variations. Any method, therefore, of measuring or rendering visible the depression of the central surface, will indicate variations in the velocity of rotation, and an instrument constructed on this principle is sometimes employed to measure the velocity of machinery. . . . Woltmann's *tachometer* . . . consists substantially of a small windmill set in the stream.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

M. M. S. 'Patagonian' was built as a three-decker, at a cost of 120,000*l.*—when it was discovered that she could not sail. She was then cut down into a frigate at a cost of 50,000*l.* when it was found out that she would not *tack*.—*Hannay, Singleton Fenshaw, b. ii. ch. i.*

Again the 'Viper' *tacked*, she worked her sails as beautifully as a girl manœuvring a parol. And now she lay on the larboard tack nearly up for the 'Patagonian's' stern.—*Ibid.* ch. vii.

3. Add a supplement to a bill in its progress through parliament.

A third gave utterance to a sentiment which it is difficult to understand how any assembly of civilized and Christian men, even in a moment of strong excitement, should have heard without horror. 'They object to *tacking*; do they? Let them take care that they do not provoke us to *tack* in earnest. How would they like to have bills of supply with bills of attainder *tacked* to them?'—*Macaulay, History of England, ch. xxv.*

Tack. *s.*

1. Addition; supplement: (specially in bills passing through parliament).

Some *tacks* had been made to money-bills in King Charles's time.—*Bishop Burnet, History of his Own Time.*

Only three days later, a strong party in the Commons, burning with resentment, proposed to tack the bill which the Peers had just rejected to the Land Tax Bill. This motion would probably have been carried, had not Fokys gone somewhat beyond the duties of his place, and, under pretence of speaking to order, shown that such a *tack* would be without a precedent in parliamentary history.—*Macaulay, History of England, ch. xxi.*

2. Lease; bargain: (in use chiefly in Scotland, whence Tacksman).

Heir tack; hold tack. Last; hold out: (*tack* is still retained in Scotland, and denotes hold or persevering cohesion).

Scott, Kenilworth, ch. v.*

Lady Marney had great knowledge of society, and some acquaintance with human nature, which she fancied she had fathomed to its centre; she played herself upon her *tact*, and indeed she was very quick, but she was so energetic that her art did not always conceal itself.—*B. Diarrell, Nybil, b. i. ch. v.*

The Countess [afterwards Duchess of Marlborough] boasted that she had selected the name of Freeman because it was peculiarly suited to the frankness and boldness of her character; and, to do her justice, it was not by the ordinary arts of courtiers that she had established and long maintained her despotic empire over the feeblest of minds. She had little of that *tact* which is the characteristic talent of her sex: she was far too violent to flatter or to dissemble; but, by a rare chance, she had fallen in with a nature on which dictation and contradiction acted as philtres.—*Macaulay, History of England, ch. xv.*

No disaster could for a moment deprive him of his firmness or of the entire possession of all his faculties.—*Macaulay, History of England, ch. vii.*

Prior, Ode to Queen Anne.

Tamarind. *s.* [*Lat. tamarindus.*] In *Botany*

and *Pharmacy*. Fruit so called.

Lenitives are casia, *tamarinda*, manna.—*Wissman, Surgery.*

Purgative properties are . . . found in the fruit of *Cathartocarpus Fistula* and *Ceratonia Filiqua*, and also of the *tamarind*, the preserved pulp of which is so well known as a delicious confection, and in the leaves of *Poinciana pulcherrima*. Many cases of eatable fruit occur in this part of the order. *Mallum indicum*, also called the *tamarind* plum, has a pod formed with a delicate agreeable pulp, much less acid than the *tamarind*. Two *Codariina* are called brown and velvet *tamarinds* in Sierra Leone.—*Lindley, Vegetable Kingdom.*

Used adjectivally.

The flower of the *tamarind-tree* consists of several leaves which are so placed as to resemble a papilionaceous one in some measure; but these expand circularly, from whence many-leaved flower-cups rise the point, which afterward becomes a flat pod, containing many flat angular seeds surrounded with an acid blackish pulp.—*Miller, Gardener's Dictionary.*

Tamarisk. *s.* Shrub of the genus *Tamarix*.

The flowers of the *tamarisk* are roseaceous.—*Miller, Gardener's Dictionary.*

Tamarisk is a tree that grows tall, and its wood is medicinal.—*Mortimer, Hæmaturgia.*

Botanists are divided in opinion as to the proper place, in the Natural System, of the *tamarisk*, that common but beautiful bush, and its allies.—*Lindley, Vegetable Kingdom.*

The *tamarisk* will bear exposure to any degree of wind. The stems and leaves abound in sulphate of soda, and a species either closely allied to or identical with the common *tamarisk* produces in Arabia a substance considered by the Hebrews a great rarity, and called by them mann or manna. In the month of June it drops from the branches upon the fallen twigs and leaves, which always cover the ground beneath the tree, and being collected and cleaned is eaten with bread. Some travellers suppose this substance to be not an exudation from the tree, but the produce of an insect which infests the *tamarisk*. It is said to be most abundant in rainy seasons.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Tambourine. *s.* [*Arabic, tabl*—drum, whence also labour, timbrel.] Musical instrument for percussion; small drum.

Calliope with Muses more,
Soon as thy oaten pipe began to sound,

Tángibleness. s. Attribute suggested by Tangible.

When only one attribute, neither variable in degree nor in kind, is designated by the name, as, *whiteness, tangibleness, equality, squareness, milk-whiteness*, then the name can hardly be considered general; for though it denotes an attribute of many different objects, the attribute itself is always considered as one, not many.—*J. S. Mill, System of Logic*, b. i. c. ii. § 4.

Tánoist. s. [Gaelic, *tánaiste, tánaiste*.] Chief

(elected) of an Irish sept or clan.

Presently after the death of any of their captains,

they assemble themselves to choose another in his

stead, and nominate commonly the next brother,

and then next to him do they choose next of the

blood to be *tánaist*, who shall next succeed him in

the said captaincy.—*Spencer, View of the State of Ireland*.

Any one of the reigning family might succeed the

chief. The heir apparent was nominated by election

among the tribe in the chief's lifetime, and called

tánaist. Among the strange principles of tanistry

was one that no man could bind his successor.—*J. H. Prætor, The Early and Middle Ages of England*, ch. xxx.

Tánistry. s. [Gaelic, *tánaisteachd*.] System

of elective chieftainship.

The Irish hold their lands by *tanistry*, which is

no more than a personal estate for his life-time that

is *tanist*, by whom he is admitted thereto by

election.—*Spencer, View of the State of Ireland*.

If the Irish be not permitted to purchase estates

must they not continue their custom of *tanistry*?

which makes all their possessions uncertain.—*Sir J. Davies, Discourse on the State of Ireland*.

By the Irish custom of *tanistry*, the chieftains of

every country, and the chief of every sept, had no

longer estate than for life in their chieftaincy; and

heirs, did not succeed them, but their *tanists*, who

were elective, and purchased their elections by

strong hand.—*Ibid.*

I saw a tank or magazine of water, a very stately

work indeed.—*Sir T. Herbert, Relation of some*

Years Travels into Africa and the Great Asia, p. 43.

Handle your pruning knife with dexterity; go

tightly to your business: you have cost me much,

and must earn it: here's plentiful provision, rascal;

swimming in the garden, and water in the tank; and

in holy days, the licking of a platter of rice when

you deserve it.—*Dryden, Don Sebastian.*

Ballie's detachment was destroyed. Munro was

forced to abandon his baggage, to fling his guns into

the tanks, and to save himself by a retreat which

might be called a flight.—*Macaulay, Critical and*

Historical Essays, Warren Hastings.

The tank consisted of a rectangular zinc framing, twenty inches long by thirteen broad, and twenty-one in depth, having slate cemented into it at the bottom and sides, and being glazed at the back and front. . . . The bottom of the tank was covered, for about two inches, with a mixture of sandy loam and gravel, into which several plants of the *Vallisneria spiralis*, the vegetable member of the arrangement, were inserted. . . . The tank was loosely covered with a plate of glass, so as to allow of a free admission of the external air, and at the same time keep out a great deal of the soot and dust of the London atmosphere and impede the too rapid evaporation of the water. As the *Trichomanes* were stated to delight in shade, a thin muslin blind was placed over the covering glass. *Warrington, On Alteration of Carbonate-of-Lime, Proceedings of the Royal Society*, December 3, 1847.

The shrinking slaves of winter.—*Shakespeare, Cymbeline*, iv. 4.

Tánmill. s. Mill for breaking up bark for tanning.

The first machines employed to squeeze the canes,

were mills similar to those which serve to crush

apples in some other districts or somewhat like *tan-*

mills.—*Ure, Dictionary of Arts, Manufactures, and*

Mines.

Táner. s. One who tans; one whose trade is to tan leather.

Tannery was that lime which is newly drawn out

of the kiln, and not slacked with water or air.—*Mason, Mechanical Exercises.*

The older *tanners*, who prided themselves on

producing a substantial article, were so much im-

pressed with the advantages of slowly impregnating

skin with astringent matter, that they employ no

concentrated infusion (weak) in their pots, but stratified

the skins with abundance of ground bark, and

covered them with soft water, knowing that its ac-

tive principles are very soluble, and that, by being

gradually extracted, they would penetrate uniformly

the whole of the animal fibres, instead of acting

chiefly upon the surface and making brittle leather,

as the strong infusion never fails to do. In fact,

100 pounds of skin, quickly tanned in a strong in-

fusion of bark, produce 138 of leather; while 100

pounds, slowly tanned in a weak infusion, produce

only 117. This additional 19½ pounds weight in the

former case serve merely to swell the *tanner's* bill,

while they deteriorate his leather, and cause it to

contain much less of the textile animal solid.

Leather thus highly charged with tannin is, more-

over, so spongy as to allow moisture to pass readily

through its pores, to the great discount and

danger of persons who wear shoes made of it. That

the saving of time, and the increase of product, are

temptations strong enough to induce many modern

tanners to steep their skins in a succession of strong

infusions of bark, is sufficiently intelligible; but

that any shoemaker should be so ignorant or so

foolish as to purchase his leather is made by a

process so injurious to its quality, is unaccountably

stupid.—*Ure, Dictionary of Arts, Manufactures, and*

Mines.

principle in certain vegetable substances,

e.g., oak bark, galls, &c., by which the

change from raw hides to leather is ef-

fectcd.

Galls consist principally of three substances;

tannin or *tannic acid*; yellow extractive; and melleo

acid. . . . pure *tannin* . . . exists in galls to the

amount of from 40 to 45 per cent. . . . *Tannin*, or

tannic acid, consists of carbon 51.66; hydrogen, 4.20;

oxygen, 44.24.—*Ure, Dictionary of Arts, Manufac-*

(Ord MS.)

Tápidon. s. [? Carib or Brazilian.] Amylaceous, starchy product of the root of the *Jatropha Manihot* (*Manihot utilisima*).

It is not a little remarkable that here, as in so many other cases, we should find in a very dangerous natural order such an abundant secretion of starch as renders certain species useful for food when the aerial matter is removed. This is most especially the case with the mandiva plant, *Manihot utilisima*. . . . Of this plant, the large root, weighing as much as thirty pounds, is full of venomous juice, which, if taken internally, produces death. The roots are rasped, the pulp well bruised, and then thoroughly washed, after which the mash is placed on iron plates to be heated. In this way the venom is washed out or driven off, and the residue becomes *casava*. The powder which floats off in the water is a very pure starch, which, when it settles down, becomes *tapioca*.—*Lindley, Vegetable Kingdom*.

Tápir. s. Pachydermatous animal (i.e. animal belonging to the same order as the elephant, &c.) of the genus *Tapirus*.

To these three genera should succeed that of the *tapira*, in which the twenty-seven cheek-teeth precede before the effect of trituration two transverse recedilinear hills; in front there are in each jaw, six incisors and two canines, separated from the cheek-teeth by a void space. The nose is in the form of a little fleshy trunk; the anterior feet have four toes; the posterior three.—*Translation of Cuvier's Règne Animal*.

The *Pachydermatous* is also a last . . . genus, with the same cheek-teeth as the two last, six incisors, and two canines in each jaw, like the *tapira*, a short fleshy trunk, for the muscles of which the bones of the nose were shortened, and left under them a strong snout. We have discovered the bones of this genus mixed up with those of the *Anoplotherium* in the plaster quarry of the environs of Paris, and they exist in many other parts of France.—*Ibid.*

The American *tapir* is the largest quadruped in South America, and is extensively distributed over that continent, extending over almost every part of it east of the Andes, but probably most abundant within the tropics. It reaches from five to six feet in length, is powerfully formed, and is covered with a waxy close lying hair, forming a bristly mane upon the neck. The colour is a deep brown.—*Sir W. Jardine, in the Naturalist's Library*.

appearance of joy, to greet the return of the youth.
—*Sir W. Scott, Castle Dangerous*, ch. 31.

please; and the apothecary may mingle her as he
pleases.—*Hovell*.

According to Reichenbach, it contains the peculiar proximate principles, paraffine, euphion, creosote, picamar, pittaval, besides pyroxygous resin, or pyrene, pyroxygous oil, or pyrololefin, and vinegar. Of all which, moreover, a national assembly must
be eloquently apprised. Such three weeks of swearing

they have faith, were it only in the Gospel according to

Tarantula (so called from Taranto in Sicily) [is]
the name of a Fabrician genus of pectipalpus pulmonary
Arachnida, infesting the torrid regions of Asia and America.
The group is now divided into the genera *Phrynus* and
Thelyphonus. The term is also applied to a genus of spiders

Cuvier's Règne Animal*, 1827.

To seem like him.
Shakespeare, Henry IV. Part II. li. 3.

Addison.

It is well known, that, among the different causes
of war, commerce: I jealousy was formerly one of the
most conspicuous; and there are numerous instances
of quarrels respecting the promulgation of some
particular tarif, or the protection of some favourite
manufacture. Disputes of this kind were founded
upon the very ignorant, but the very natural notion,
that the advantages of commerce depend upon the

one country must be lost by another.—*Buckle, His-
tory of Civilization in England, vol. i. ch. iv.*

The situation of this ancient fortress was remark-

circumference, surrounded by hills of considerable
height. . . . The surprise of the spectator was chiefly
excited by finding a piece of water situated in that
high and mountainous region. . . . Under the burn-
ing sun of summer, the clear azure of the deep un-
ruffled lake refreshed the eye, and impressed the
mind with a pleasing feeling of deep solitude. In
winter, when the snow lay on the mountains around,
those dazzling masses appeared to ascend far beyond
their wonted and natural height, while the lake,
which stretched beneath, and flung their bosom
in frozen waves, lay like the surface of a
darkened and broken mirror around the black and
rocky islet, and the walls of the gray castle with

wine.—*Quincy.*

Tartar, called also argal or argol, is the crude

The superfluous liquor, which is a solution of neutral tartaric acid of potassa, must be drawn off by a siphon, and decomposed by a solution of chloride of calcium (muriate of lime); the parts of the dry chloride are sufficient to form tartar. — *Ure, Dictionary of Arts, Manufactures, and Mines.*

First, then, of the first: it is objected that the
Germans have a radically bad *taste*. This is a deep-
rooted objection, which assumes many forms, and
extends through many ramifications. Among men
of less acquaintance with the subject of German
taste in general, the spirit of the accusation seems
somewhat as follows.—*Carlyle, Critical and Miscel-
laneous Essays, State of German Literature*.

Taste, if it mean anything but a paltry connois-

Tasty. *adj.* Expressed or done so as to
show intellectual relish: (added by Todd,
and noted as a modern word).

Still, notwithstanding the resources we thus have
in our double language, we are in some instances
perplexed to form such adjectives as we require; for
instance, one to correspond to the substantive
'taste.' If we merely mean the bodily sense, we
might probably say the gustatory power, though
the word is little used. But the task is more diffi-
cult when we want an adjective referring to the
critical faculty, and not to the physical perception.
Tasty, as Mr. Coleridge has observed, is a word
which milliners only can venture upon; and yet, as
right and wrong depend upon moral principles, so
beautiful and ugly depend on principles of 'taste,'
which it would be very convenient to designate by
an adjective. Baumgarten, and since him many
German and some English writers, have adopted
the term *esthetical*.—*Philosophical Museum, On Eng-
lish Aesthetics*.

duce you to Lord Talbourn.' The peer bowed
haughtily; Mr. Gawtry did not return the sala-
tion, but with a sort of gulp as if he were swallow-
ing some lump of passion, strode to the fire; and
then, turning round, again fixed his gaze upon the
new guest. Talbourn, however, who had not lost
his self-composure at this strange rudeness, was
now quietly talking with their host. 'Your doctor
wears an eccentric name—a little absent-minded,
I suppose. Have you been to China, yet?' Mr. Gaw-
try remained by the fire heating the devil's *tatto*
upon the chimney-piece, and ever and anon turning
his glance towards Talbourn, who seemed to have
forgotten his existence.—*Lord Lytton, Night and Morning*.

Tauntingly, adv. In a taunting manner:

That envied his resist.

The wanton goddess view'd the warlike maid

Prior, Pulvis and Venus.

Those who *tauntingly* reminded Fenwick that he
had supported the bill which had attained Mon-
mouth might perhaps themselves be *tauntingly*
reminded, in some dark and terrible hour, that they
had supported the bill which had attained Fen-
wick. — *Macaulay, History of England, ch. xxii.*

Tauricornous, adj. [Lat. *tauricornis*, from
taurus = bull + *cornu* = horn.] Having
horns like a bull.

Their descriptions must be relative, or the *tauri-
cornous* picture of the one the same with the other.

zodiac.

Were we not born under *Taurus*? — *Shakespeare,*
Twelfth Night, I. 3.

Taut, adj. Tight.

Ne- 's health had suffered greatly while he was
in the amusements. 'My complaint,' he said, 'is as
if a arch were jerked tight over my breast; and my
endurance in the night is to get loose.' — *Southey,*
Life of Nelson, ch. vi.

Tautological, adj. [Gr. *ταυτολογος* — I repeat
the same thing.] Repeating the same thing;
pleonasm of words, *tautological* repetitions. —
Barton, Anatomy of Melancholy, p. 100.

His prose, again, is among the worst known to
degraded with stiffness; diffuse; my *tautology*
yet obscure and vague; contorted into endless in-
volutions; a misshapen, lumbering, unexpected
coil, with much inexpressible in its entanglements,
and seldom worth the trouble of unravelling. — *Crit-
ical and Miscellaneous Essays, Writings*
of *Worcester.*

One writer... desperately declares that the laws
of motion are more trifling, or *tautological* judi-
gements. It never seems to have occurred to him,
that of all wonders, one of the greatest would be to
find men in doubt for centuries as to whether 'the
whole is greater than its part,' or whether 'every-
thing that happens continually has a cause'; yet
if the laws of motion are, like these, *tautological*
judgements, that marvel has been often counselled by
men of the greatest ability specially engaged in the
cultivation of science. — *Inghy, Introduction to*
Metaphysics.

Tautologize, v. n. Repeat the same thing.

That in this brief description the wise man should
tautologize, is not to be supposed. — *Smith, Portrait*
of Old Age, p. 25: 1800.

Tautologizing, part. adj. Repeating the
same thing; practising, having the habit
of tautology.

The *tautologizing* babler, if he be a physician,
certainly is more troublesome than the disease; if
your companion in a voyage, more insupportable
than the qualms occasioned by the tumbling of the
sea; if he joins these, his panegyric's more offensi-
ve than the reproaches of another: it is a greater
pleasure to converse with vicious men, so they be
discreet in their language, than with traitors,
though never so honest. — *Translation of Plutarch's*
Morals, vol. iv. p. 220. (Ord M.)

Tautologous, adj. Tautological.

The particle is *tautologous*. — *Scott, Essays, p.*
28. (Ord M.)

Tautology, s. Repetition of the same words,
or of the same sense in different words.

shown us what antiquity never saw in a dream. —
Glaucill, Scopia Scientifica.

Nor e'en the feet of thy own Psyche's rhyme;
Though they in numbers as in sense excel,

Every paper addressed to our beautiful inen-
durable, hath been filled with different considera-

With unrestrained loose companions.

Shakespeare, Richard II. v. 3.

To reform the vices of this town, all *taverns* and
alehouses should be obliged to disband their com-
pany by twelve at night, and no woman suffered to
enter any *tavern* or alehouse. — *Swift.*

Used *adjectively*.

You shall be called to no more payments; fear
no more *tavern* bills, which are often the sadness of
parties, as the procuring of mirth. — *Shakespeare,*
Cymbeline, v. 4.

During the last century a very laudable industry
has been shown by antiquaries in the publication
of account-books belonging to private persons,
registers of expenses in convents, returns of mar-
kets, valuations of woods, *tavern* bills, and in short
every document, however trifling in itself, by which
this important subject can be illustrated. — *Hallam,*
View of the State of Europe during the Middle
Ages, pt. ii. ch. ix.

Tavern, s. n. Live in, or us in, a tavern.

Who would reverence thy way, when, like Nero,
thou shouldst *tavern* out thy time with wantons? —

Yes, if they *taw* him as they do a bit-leather.
Upon an iron, or bent him soft like stock-fish.
Beaumont and Fletcher, Captain.

Taw, s. Marble to play with.

Trembling I've seen thee dare the kitten's paw;
Nay, mix with children as they play'd at *taw*;
Nor fear the marbles as they bounding flew,
Maiden to them, but rolling rocks to you.
Gay, Lamentation of Gondolotti.

As it must greatly raise our expectation of the
future conduct in life of boys, when in their tender
years we perceive instead of *taw* or balls, or other
childish playthings, to chase, at their leisure hours,
to exercise their genius in contentions of wit, learn-
ing, and such like; so must it inspire one with equal
contempt of a man, if we should discover him play-
ing at *taw*, or other childish plays. — *Folding, Ad-*
stracts of Joseph Andrews.

Tawdriness, s. Attribute suggested by

neck.

He rails from morning to night at censured fash-
ion and *tawdry* courtiers. — *Addison, Spectator.*
Her eyes were wan and eager, her dress thin and
tawdry, her voice gentle and childish. — *Ibid.*

That the false and *tawdry* ware, which was in all
hands, should reach us before the chase and truly
excellent, which it required some excellence to re-
cognize: that Kozzhu's insanity should have
spread faster, by some fifty years, than Lessing's
wisdom; that Kant's philosophy should stand in
the background as a dreary and abortive dream;
and Gall's erudition be held out to us from every
booth as a reality: all this lay in the nature of the

case. — *Campbell, Critical and Miscellaneous Essays*
State of German Literature.

An impure style of speaking and writing does not
recommend itself to institutions and refined judges,
merely because it pleases a popular audience, or a
wide circle of readers. A discourse full of *tawdry*
ornament, false brilliancy, far-fetched metaphors,
and turgid exaggeration, which might obtain the
applauds of an uneducated audience, would offend
the taste of a more instructed class of hearers. — *Sir*
G. C. Lewis, On the Influence of Authority in Mat-
ters of Opinion, ch. vi.

Tawed, part. adj. Rendered like leather.

His knuckles knob'd, his flesh deep dent'd in,
With *tawed* hands, and hard taw'd skin.

For interim to our studies, shall relate,
In high-born words, the worth of many a knight
From *tawny* Spain, lost in the world's delirium.

Furus his body must be drawn the colour of the
tawny Moor, upon his head a red sun. — *Peacham,*
On Uravine.

The *tawny* lion pawing to get free,
Milton, Paradise Lost, vii. 461.

Whilst they make the river *Savona* to bound the
Moors, so that on the south side they are black, on
the other only *tawny*, they seem not to derive it
from the sun. — *Sir T. Browne.*

Above your own *Numidia's tawny* sun?

Addison, Cato.

or tithe. — *Arbuthnot.*

Fly far from hence
All private *taxes*, and unpolish'd phrases,
Whatever may but show like vicious;
For wicked mirth never true pleasure brings,
But honest minds are pleas'd with honest things.
Beaumont and Fletcher, Knight of the
Barrado, Prologue.

He could not with ut great of heart, and without
some *tax* upon himself and his ministers for the not
executing the laws, look upon the bad lives of
some pamphlets. — *Lord Clarendon, History of the*
Great Rebellion.

3. Task; lesson to be learned. *Obsolete.*

At the archdeacon's visitation, the archdeacon
shall appoint the curate to certain *taxes* of the New

of Ecclesiastical Discipline and Inquiry: 1564.

without a tacit reproach of their own. — *Dr. H. More,*

He call'd him back aloud, and *tax'd* his fear;
And sure enough he heard, but durst not hear.
Ibid., Translation from Ovid, Contention of
Ajax and Ulysses.

This salutation cannot be *taxed* with flattery, since
it was directed to a prince, of whom it had been
happy for Rome if he had never been born, or if he
had never died. — *Addison.*

Tax-gatherer. s. Collector of taxes.

He, says Horace, being the son of a *tax-gatherer* or collector, smells everywhere of the meanness of his birth.—*Dryden*.

Edward IV. was courteous in this newly-invented style, and was besides the handsomest *tax-gatherer* in his kingdom! His royal presence was very dangerous to the purses of his loyal subjects, particularly of the females.—*J. Barroli, Curiousities of Literature, Taxation and Tyranny*.

Taxable. adj. Capable of being taxed.**Taxation. s.**

1. Act of lording with taxes; impost; tax.

The subjects could taste no sweeter fruits of having a king than serious *taxations* to some vain purposes; laws made rather to find faults than to prevent faults.—*Sir P. Sidney*.

I bring no overture of war, no *taxation* of humance; my words are as full of peace as an infant.—*Shakespeare, Twelfth Night*, i. 3.

The daily such *taxations* did exert,
As were against the order of the state. *Idem*.

Various laws I heard...
Of old mismanagements, *taxations* new;
All neither wholly false, nor wholly true.

Among the English clergy the encroachments of the Pope, especially in two ways, the direct *taxation* and imposition of benefices for strangers, had kindled such violent resentment, alike among the laity and the prelates, as almost to threaten that the realm would altogether throw off the papal yoke.—*Milman, History of Latin Christianity*, b. x. ch. v.

2. Accusation; scandal.

My father's love is enough to honour; speak no more of him, you'll be whipt for *taxation* one of these days.—*Shakespeare, As you like it*, i. 2.

Taxis. s. [Gr. = arrangement.] In *Surgery*. All that is not strictly definition, that is, all that is not artificial character, in the descriptions of such classes, is a statement of truths, more or less general, more or less precise, but making up, together, the positive knowledge which constitutes the science. As we have said, the consideration of the properties of plants in order to form a system of classification, has been termed *taxonomy*, or the systematic of botany; all the parts of the descriptions, which, taking the system for granted, convey additional information, are termed the physiography of the science; and the same terms may be applied to the other branches of Natural History.—*W. & W., History of Scientific Ideas*, vol. ii. p. 121: 1855.

Tea. s. [Chinese, *teh*.] Chinese plant of the genus *Thea*, of which the infusion gives the drink so called.

The names' friend, *tea*, does our fancy nil,
Repress those vapours which the head invades.

Green leaves of *tea* contain a narcotick juice, which expels by roasting: this is performed with great care before it is exposed to sale.—*Arbutnot, On the Nature and Choice of Aliments*.

Tea was first imported from Holland by the earls of Arundel and Chesney, in 1664; from their ladies the women of quality learned its use. Its price was then three pounds a pound, and continued the same to 1707. In 1715, we began to use green *tea*; and the practice of drinking it descended to the lower class of the people.—*Johnson, Review of Hanway's Journal*.

Applied to infusions other than those of tea: (as, linseed *tea*).

Why will Delia thus retire?
Why so languish, live away?

Whilst the sighing crews admire,
'Tis too late for harkhorn tea.

Isid. M. W. Montague.

As the first element in a compound.

One has a design of keeping an open *tea-table*.—*Addison*.

When you sweep, never stay to pick up *tea-spoons*.—*Id.*

Yet, as Catherine of Braganza was certainly the first *tea-drinking* queen of England, she has had the credit of setting the fashion for the use of that temperate beverage, in an age when ladies, as well as gentlemen, at all times of the day, heated or stupified their brains with ale or wine, for the want of the more refined substitutes of tea, coffee, and chocolate.—*Agnes Strickland, Lives of the Queens of England, Catherine of Braganza*.

We ought to bring our minds free, unbiassed, and *teachable* to learn our religion from the word of God.—*Watts*.

Docility, *teachableness*, tractableness, is the property of wisdom; and he that is wise, is nearest unto happiness.—*Granger, Commentary on Ecclesiastes*, ii. 103: 1821.

It is difficult, again, to discriminate between *teachableness*, humility, and reverence for high authorities, and a tame and passive submission to the understanding.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. v.

Teache. s. [?] See extract.

As the liquor grows hot in the clarifier, a scum is thrown up, consisting of the coagulated freeness of the cane juice. The fire is now gradually raised till the temperature approaches the boiling heat—to which, however, it must not be suffered to rise. It is known to be sufficiently heated, when the scum rises in lobsters, which break into white froth; an appearance observable in about forty minutes after kindling the fire. The damper being shut down, the fire dies out; and after an hour's repose the clarified liquor is ready to be drawn off into the last and lowest in the series of evaporating pans. In the British colonies, these are merely numbered 1, 2, 3, 4, 5, beginning at the smallest, which stands right over the fire, and is called the *teache*; because in it the trial of the syrup by touch is made.—*Or. Dictionary of Arts, Manufactures, and Mines*.

1. Instructor; preceptor.

Nature is no sufficient *teacher* what we should do that may attain unto life everlasting.—*Hooker Ecclesiastical Polity*.

And with no little study, that my *teaching*,
And the strong course of my industry,
Might go one way.—*Shakespeare, Henry VIII.*

All the schools we have, shew that various imitations are not more common in Russia than in France or England; and it is evident that the Russians submit to the *teachings* of the church with a docility or alacrity that displayed by their civilised opponents.—*Hayke, History of Civilization in England*, vol. i. ch. iv.

Teak. s. See Tede.**Teak. s.** [?] In *Botany*. Valuable timber-tree of the genus *Tectona*.

There is reason to believe that the timber reported from the coast of Africa, under the name of *African teak*, belongs to some tree of this order [the *Euphorbiaceae*].—*Lindley, Vegetable Kingdom*.

Teak (compounded with oak), is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability, it demands less care and preparation: for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate.—*Crawford, Eastern Archipelago*, vol. i. p. 45.

Teal. s. [?] Small species of duck; *Anas crecca*; half-bird.

Some serve for food to us, and some but to feed themselves; amongst the first sort we reckon the dip-chick, coot, *teal*, whisson.—*Cresset, Survey of Cornwall*.

The *teal* bear confinement well, and at the margin of the Zoological Society, though restricted to a very small pond with a margin of thick and high grass, with some low shrubs, have lived regularly for five seasons in succession. The eggs are white tinged with buff, measuring one inch nine lines in length by one inch four lines in breadth. The food of the *teal* consists of seeds, grasses, water-plants, and insects, in their various states. In confinement they require grain. Some *teal* breed about the lakes of Wales and a few in Romney Marsh.—*Currell, History of British Birds*.

Team. s. [A.S. = issue, succession, row, line.]

Knowing that thou would'st have me drown'd on shore
With tears as salt as sea, through thy unkindness.

of it to have his government torn in pieces, and
shared by his subjects?—*Locke.*

Addison.

Tear, v. a. Fume; rave; rant turbulently.
Tear, s. Rent; chiefly in combination with Wear.

TEAR

Mr. Hallam has formed, we think, a most correct estimate of the character and administration of Clarendon. But he scarcely makes a sufficient allowance for the wear and tear which honesty almost necessarily sustains in the friction of political life, and which, in times so rough as those through which Clarendon passed, must be very considerable.—*Mansley, Critical and Historical Essays, Hallam's Constitutional History.*

Tearful, s. and adj. Ranting.
I had rather hear two good jests, than a whole play of such tear-cut thunderbolts.—*Day, Isle of Gulls, induction.* (Sares by H. and W.)

Tearful, adj. Tender; shedding tears. *Rare.*

Tearful, s. [A.S. *tearful.*] Native plant, used in making cloth, of the genus *Dipsacus*.

Tearful, s. In the *Woolen Manufacture* Raising a nap by means of the teazle.

The object of *teazling* is to raise up the loose filaments of the woollen yarn into a nap upon one of the surfaces of the cloth, by scratching it either with thistle heads, called *teazles*, or with *teazle combs* or *brushes* made of wire. In large manufactures this operation is performed by a machine called a *teazle-mill*.—*Cree, Dictionary of Arts, Manners, and Manners.*

Technical, adj. [Gr. *τεχνή* = art.] Relating to the (useful) arts.

In *technical* words, or terms of art, they refer to and from calling the same substance sometimes the sulphur, and sometimes the mercury of a body.—*Locke.*

Of the terms of art I have received such as are to be found either in books of science or *technical* dictionaries; and have often inserted, from philosophical writers, words which are supported perhaps only by a single authority, and which being not admitted into general use, stand yet as candidates for or probationers, and must depend for their adoption on the suffrage of futurity.—*Johanna, Preface to Dictionary.*

The knights and burghers thus chosen, as well as the clergy within the province of Canterbury, met at Northampton; those within the province of York, at that city. And neither assembly was opened by the king. This monarchical convention was nevertheless one means of establishing the representative system, and, to an inquirer free from technical prejudice, is little less important than a regular parliament.—*Hallam, View of the State of Europe during the Middle Ages, pt. ii. ch. viii.*

It is hardly necessary to give any warning, generally, against the unnecessary introduction of *technical* language of any kind, when the author can be adequately, or even tolerably, expressed in common, i.e. unscientific words. The terms and phrases of art have an air of pedantic affectation, for which they do not compensate, by even the smallest appearance of increased energy.—*Archibald, Whittell, Elements of Etymology, pt. iii. ch. i. § 6.*

Technicality, s. Term applied to words or arguments derived from the limited and narrow character of technical language, as used in broad and comprehensive subjects.

Into such follies the schoolmen appear to have launched, partly because there was less danger of running against a heresy in a matter where the church had defined so little; partly from their presumption, which disdained all inquiries into the human mind, as merely a part of physics, and in no small degree through a sort of mystical fascination, derived from the oriental philosophy and the later Platonists, which blended itself with the cold-headed logic of the Aristotelian school.—*Hallam, View of the State of Europe during the Middle Ages, pt. ii. ch. ix.*

Men who had the irresistible calling to be artists became Francisians or Dominicans, not because mediocrity was favourable to art, but because it was, and plerished, and strengthened those emotions which were to express themselves in art. Religion drew them into the cloister; the cloister and the church offered them its walls; they drew from all quarters the traditions, the technicalities of art.—*Milton, History of Latin Christianity, b. xiv. ch. x.*

Technically, adv. In a technical manner.
The first professed English satirist, to speak technically, is Joshua Joseph Hall.—*T. Watson, History of English Poetry, iv. 2.*

Technological, adj. Relating to, constituted by, technology.
Had the apostle used this *technological* phrase in any different sense from its common acceptance, he would have told us of it.—*Scott, Christian Life, pt. ii. ch. vii.* (Rich.)

Technology, s. [Gr. *λογος* = word, principle.] Doctrine, system, philosophy, of the useful arts.
There were not any further essays made in *technology* for above four hundred years; but all men unacquainted in the common grammar.—*Friedl, Examination of Grammar, preface, p. 17: 1853.*

Tea, s. One who, that which, teases.
These *teazles*, rather to rouse than pinch the game, only made Whittaker find his spirits.—*Fuller, Holy State, p. 60.*

A fly buzzing at his ear, makes him deaf to the best advice. If you would have him come to himself, you must take off his little *teazer*, which holds his reason at bay.—*Collier.*

Telegraphy. s. System of telegraphic communication.

Compliments alike in the early history and in the latest development of this magnificent invention, Professor Wheatstone has recently constructed instruments of the most ingenious construction, which are not only capable of working with electric currents produced by a mere jacked magnet through sixty miles of wire, but which also print off the messages upon a strip of tin in plain Roman characters. These instruments are especially adapted and now extensively used for private telegraphy.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Teleological. adj. Relating to, connected with, final causes.

A final purpose is no doubt, also, subserved in most of the separate centres of ossification, which unite homologically to permanently distinct bones in the general vertebrate series; it has long been recognised in relation to facilitating birth in the human fetus; but some facts will occur to the human osteologist, of which no teleological explanation can be given. . . . Here, then, we have the homology, without a teleological explanation of the separate centre for the coracoid process in the ossification of the human scapula.—*Owen, Lectures on Comparative Anatomy*, lect. ii.

We may, therefore, without any teleological implication, consider the fitness of such organizations.—*Herbert Spencer, Inductions of Biology*, § 79.

Teleologically. adv. In a teleologic, or teleological, manner.

But, besides these, the above discussed deeper and more essential differences of the bones require that they should be divided into simple, as being developed from a single centre, and compound, as developed from separate centres; and the compound bones, in the human subject, for example, may be subdivided into the teleologically compound, as the two cylinders, which are originally developed from separate centres in relation to a spinal final purpose; and the homologically compound, as most of the ossa hirs (vertebræ, scapula), and many ossa mixta (vertebræ, sacrum), which are developed from separate centres, representing permanently distinct simple bones in other vertebrates. The teleologically compound bones have their relations limited to the particular exigencies of particular classes, but the homologically compound bones have relations extending over the whole vertebrate series.—*Owen, Lectures on Comparative Anatomy*, lect. ii.

Homologically they are the last pair of humeral homomorphoses advanced, as in many reptiles, from the scapula to the osseous status; teleologically they belong to the category of the trochanteric ossicles, commonly called sesamoid.—*Id., Anatomy of Vertebrates*.

Teleologist. s. Advocate, supporter, of the doctrine of final causes, or teleology.

The explanation of the teleologist is untrue, it is often an odious to the truth; for though, on the hypothesis of evolution, it is clear that things are not arranged thus or thus for the securing of special ends, it is also clear, that arrangements which do secure these special ends tend continually to establish themselves as established by their fulfilment of these ends.—*Herbert Spencer, Inductions of Biology*, § 79.

Teleology. s. [Gr. τέλος, τέλος = end + λόγος = word, principle, method.] Doctrine of final causes, i. e. of causes which are the effect of an intention or aim, and, as such, indicative of design.

But I would remark, that history, viewed as a philosophical science, will be found to contain a peculiar element, a distinct teleology, or consideration of final causes, which its sister sciences have not. I do not speak here of the view to teleology which regards the all-ordinating, overruling intelligence, of what Paley terms the design of the Designer, but of a proximate teleology of the machinery in change.—*Sir E. S. Creasy, Spirit of Historical Study*.

Without attempting in this place to justify my opinion, or even to define the kind of justification which it admits of, I merely declare my conviction, that the general principle to which all rules of practice ought to conform, and the test by which they should be tried, is that of *conduciveness* to the happiness of mankind, or, rather, of all sentient beings: in other words, that the promotion of happiness is the ultimate principle of teleology.—*J. S. Mill, System of Logic*, pt. vi, b. ii, § 7.

Telescope. s. [Gr. τήλη = far off + σκοπία = I see, view, look, spy. The word is not old in the language; in 1655, it is placed in Bagwell's *Mystery of Astronomy* among words requiring an explanation.] Optical

apparatus for the purpose of magnifying distant objects; as such, to be contrasted with the Microscope.

We have no doubt that this invaluable instrument was invented by Roger Bacon or Baptista Porta, in the form of an experiment; though it had not, perhaps, in their hands assumed the maturity of an instrument made for sale, and applied to useful purposes, both terrestrial and celestial. If a telescope is an instrument by means of which things at a distance can be seen better than by the naked eye, then Baptista Porta's concave lens was a real telescope; but if we give the name to a tube having a convex object-glass at one end, and a concave eyepiece lens at the other, placed at the distance of the sum of difference of their focal lengths, then we have no distinct evidence that such an instrument was used before the beginning of the seventeenth century. *Sir D. Brewster, in Encyclopædia Britannica, Optics*.

If, instead of this variation of heat, we suppose an
equality, or constant *temperature* of it before the
debate, the case would be much altered. *Wood-*
ward, Essay towards a Natural History of the
Reith.

To assert that a body received heat without its
temperature rising, was to make the understanding
conceive the touch, and defy its dictates. It was a
bold and beautiful paradox, which required courage
as well as insight to touch, and the reception of
which marks an epoch in the human mind, because
it was an immense step towards idealizing matter
into force. . . . Heat affects the touch, but, under
ordinary circumstances, does not affect the eye.

The capital difference, however, between them is,
that heat, unlike light, possesses the property of
temperature; and this property is so characteristic,
that, until our understandings are enlightened by
science, we cannot conceive heat separated from
temperature, but are compelled to confuse one with
the other.—*Buckle, History of Civilization in Eng-*

When we express our immediate experiences of a body by saying that it is hard, what are the experiences implied? First, a sensation of pressure of considerable intensity is implied; and if, as in most cases, this sensation of pressure is given to a finger voluntarily thrust against the object, then there is simultaneously felt a correspondingly strong sensation of muscular *ténsion*. But this is not all; for feelings of pressure and muscular *ténsion* may be given by bodies which we call soft, provided if compressing finger follows the surface as fast as it gives way. In what they consists the difference between the perceptions? In this, that whereas when a soft body is pressed with increasing force, the synchrostatic sensations of increasing pressure and increasing muscular *ténsion* are accompanied by sensations of muscular movement; when a hard body is pressed with increasing force, these sensations of increasing pressure and *ténsion* are not accompanied by sensations of muscular movement. Considered by itself then, the perception of softness may be defined as the establishment in consciousness of a relation of simultaneity between three series of sensations—a series of increasing sensations of pressure; a series of increasing sensations of *ténsion*; and a series of sensations of motion. — *Herbert Spencer, Principles of Psychology*, § 55.

Thy grateful duty. *J. Phillips, Cyder*, ii. 117.

The hereditary revenue had passed, with the crown, to William and Mary. It was derived from the rents of the royal domains, from fees, from fines, from wine licences, from the first fruits and *tithes* of benefices, from the receipts of the Post-Office, and from that part of the excise which had, immediately after the Restoration, been granted to Charles the Second and to his successors for ever in lieu of the feudal services due to our ancient kings.—*Macculey, History of England*, ch. xv.

Tenthly. adv. In the tenth place.**Tentiginous. adj.** [Lat. *tentigo*, -inis.] Having the character of tentigo or tetter.

I think it is agreed among physicians, that nothing affects the head so much as a *tentiginous* humour, repelled and elated to the upper region, banished by daily practice to run frequently up into madness.—*Nieff, On the Mechanical Operations of the Spirit*. (Ord MS.)

Tenuity. s. [Fr. *ténuité*; Lat. *tenuitas*, -atis; *tenuis* = thin, delicate.]

At the height of four thousand miles, the ether is of that wonderful *tenuity*, that if a small sphere of common air, of an inch diameter, should be extended to the thinness of that ether, it would more than take up the orb of Saturn, which is many million times bigger than the earth.—*Bentley*.

2. Poverty; meanness.

The *tenuity* and contempt of clergymen will soon... them see what a poor creature they are, when parted from the influence of that supremacy.—*Rikon Basilike*.

The uncertainty of *tenure*, by which all worldly things are held, ministers very pleasant meditation.—*Sir W. Raleigh*.

In Scotland are four *tenures*; the first is pure allodial, which is proper to spiritual men, paying nothing for it, but devotes annuaries suffragia; the second they fee, which holds of the king, church, barons, or others, paying a certain duty called feudal dues; the third is a holding in lauch by payment of a penny, rose, pair of gilt spurs, or some such thing, if asked; the fourth is by service of ward and relief, where the heir being minor is in the custody of his lord, together with his lands, and lands holden in *tenure* are called *de hauberk* or *houber*, *feudum militare* or *brabantum*. Man... must be known, his strength, his state,
And by what *tenure* he holds all of state.

Dryden, State of Innocence, i. 2.

Whether... the law of feudal *tenure* can be said to have existed in England before the Conquest must be left to every reader's determination. Perhaps any attempt to decide it positively would end in a verbal dispute. In tracing the history of every political institution, three things are to be considered, the principle, the form, and the name. The last will probably not be found in any genuine Anglo-Saxon record. Of the form, or the peculiar ceremonies and incidents of a regular fief, there is some, though not much appearance. But those who reflect upon the dependence in which free and even noble tenants held their estates of other subjects, and upon the privileges of territorial jurisdiction, will, I think, perceive much of the intrinsic character of the feudal relation, though in a less mature and systematic shape than it assumed after the Norman conquest.—*Hollam, View of the State of Europe during the Middle Ages*, pt. i. ch. viii.

2. At present it is comparatively a common word: i.e. a word as common as the subject to which it applies, with a wholly different sense; it meaning the philosophical investigation, in Physiology, of such abnormal productions as pass under the names of monster, monstrosity, or *lusus naturæ*.

Now, it is known that the whole vertebrate animals are moulded on one general plan; a continuous line can be traced of gradually increasing perfection of development from the lower to the higher animals. This is also a fundamental law of physiology, or *teratology*, that in the numerous deviations of structure found in various monstrosities there is a retrogression toward the development of a lower species.—*Dr. Sarsky, Lectures on Mental Diseases*, lect. vi.

Word for word, this is a compound of *terebinthine*, *note*, in its medical sense; also, the origin of the word *terpentine*. As a botanical term it has no connection with the tree, the class most especially connected with turpentine. What plant is meant in the extract is uncertain; probably one of the mastic. As a generic name *terebinthina* is nearly synonymous with *pistacia* (*Pistacia vera* being the pistachia nut); as the name of an order, it sometimes translates *Ammodendron*, the group to which, besides the *Pistacia*, the casahuate, the lac-plum, the mastic, the mastic-tree, the samach, and other important plants belong. The product of one species, *Pistacia terebinthina*, is still called *Sicco terpenitine*, a highly fragrant, balsamic resin, with a colour between lemon and fennel.—*Lindley, Vegetable Kingdom*.

That God was the maker of this visible world was evident from the very order of causes; the greatest argument by which natural reason convinces a God: it being necessary in such a chain of causes to ascend to, and *terminate* in, some first; which should be the original of motion, and the cause of all other things, but itself be caused by none.—*South, Sermons.*

Terminology. *s.* [Lat. *terminus* = term + Gr. λόγος = word, doctrine, principle; a hybrid coinage; one, however, which, being separated in import from nomenclature, is considered useful, and being, as may be seen in the extracts, used by scholars like Hallam and Sir G. C. Lewis, is likely to take root in our language.—*Terminology, Tidology, and Sociology*, it is hoped, are the three worst barbarisms that are destined to do so.] Doctrine, or system, of terms.

Brucker has made a distinction between the scholastic and the genuine Aristotelianism; the former being chiefly conversant with the doctors of the middle ages, adopting their *terminology*, their distinctions, their dogmas, and relying with implicit deference on Scotus or Aquinas. . . . Such . . . are the inquiries which form the subjects of the most important of Plato's Dialogues; as, 'What is rhetoric?' the topic of the *Gorgias*, or 'What is justice?' that of the *Republic*. Such, also, is the question seriously asked by Plato, 'What is truth?' and the fundamental question with speculative moralists in all ages, 'What is virtue?' It would be a mistake to represent these difficult and

noble inquiries as having nothing in view beyond ascertaining the conventional meaning of a name. They are inquired not so much to determine what is, as what should be, the meaning of a name; which, like other practical questions of *terminology*, requires for its solution that we should enter, and sometimes enter very deeply, into the properties not merely of names but of the things named.—*J. S. Mill, System of Logic*, pt. I, b. ix. § 7.

For purposes of scientific observation, a training of the senses is likewise necessary. A scientific observer must be not only familiar with the *terminology* of his science, and be able to apply its technical terms readily to the proper objects, but he ought likewise to have acquired that delicacy, rapidity, and correctness of observation which the habit of observation, combined with knowledge, can alone confer.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii.

It has been shown in another place, how the right of *territorial* jurisdiction was generally, and at last inseparably, connected with feudal tenure. Of this right we meet frequent instances in the laws and records of the Anglo-Saxons, though not in those of an early date. A charter of Edward grants to the monastery of Croyland, see, toll team and infangthief; words which generally went together in the description of these privileges, and signify the right of holding a court to which all freemen of the territory should repair, of deciding pleas therein, as well as of imposing amercements according to law, of taking tolls upon the sale of goods, and of punishing capitally a thief taken in the fact within the limits of the manor. *Ibid.*, pt. i. ch. viii.

Chivalry . . . grew up as a salutary antidote in the midst of poisons, while scarce any law but that of the strongest obtained reward, and the rights of *territorial* property, which are only right as they conduce to general good, became the means of general oppression.—*Ibid.*, pt. ii. ch. ix.

England, ch. xx.

they give it the appearance of having four wings.—

Tertiary. *s.*1. In Geology. Division of the strata com-
posing the crust of the earth, containing
the fossil remains of existing, as well as of
extinct, organisms. See, a-so, Eocene,
Miocene, and Pliocene.

Previously to the year 1833, . . . the strata called
tertiary had been divided by geologists into Lower,
Middle, and Upper; the Lower comprising the
oldest formations of the environs of Paris and
London, with others of like age; the Middle, those
of Bordeaux and Tournai; and the Upper, all that
lay above or were newer than the last-mentioned
group.—*Sir C. Lyell, Geological Evidences of the*
Antiquity of Man, ch. l.

Tertiary rocks were originally thought to occupy
basins, and to be, to a great extent, of freshwater
origin. It is true that the deposits of this newer
period are, in Europe, more broken and detached than
the secondary rocks; but this is due to the
fact that at the time of their deposit large tracts of
land were continue to exist in this part of the
northern hemisphere. Elsewhere, as in South
America, the *tertiary* rocks are continuous depo-
sits, fully equal in all dimensions to the largest se-
condary or paleozoic rocks of any one period, and a
large proportion are marine. *Tertiary* rocks are
rich in fossils, and the organic remains yielded by

them have naturally a greater resemblance to fami-
liar modern species now living, than that which is
seen in those of the secondary and paleozoic rocks.
... The *tertiary* rocks pass by insensible gradations
into those of modern date and recent formation.
There is no abrupt change of any kind common to
all parts of the world, either in reference to the
tertiaries or other rocks.—*Anders, in Brande and*
Cox, Dictionary of Science, Literature, and Art.

= witness.]

composed of shells; the shell of the mol-
luscosous animal (snail, oyster, &c.), as op-
posed to the crusts of the crustacea (lob-
sters, crabs, shrimps, &c.)

Testaceous, with naturalists, is a term given only
to such fish whose strong and thick shells are entire,
and of a piece; because those whose are joined, as
the lambers, are crustaceous; but in medicine all
preparations of shells, and substances of the like
kind, are thus called.—*Quincy*.

Several shells were found upon the shores, of the
crustaceous and *testaceous* kind.—*Woodward, Essay*
towards a Natural History of the Earth.

The mineral particles in these shells are plainly
to be distinguished from the *testaceous* ones.—*Ibid.*
An extremely small proportion of the fossil shells
of this [the Eocene] period could be referred to
living species, so that this era seemed to indicate
the dawn of the present *testaceous* fauna, no living

Evidences of the Antiquity of Man, ch. i.

The ecclesiastical tribunals took cognizance of
branches of contract, at least where an oath had
been pledged, and of personal trusts. They had not
only an exclusive jurisdiction over questions immu-
diately matrimonial, but a concurrent one with the
civil magistrate in France, though never in England,
over matters incident to the nuptial contract, as
claims of marriage portion and of dower. They took
the execution of *testaments* into their hands,
on account of the legacies in pious uses, which
testators were advised to bequeath.—*Hallam, View*
of the State of Europe during the Middle Ages,
pt. ii. ch. vii.

Tétrac. [Gr. *τετρα, τέσσα* = four; as the first element in a compound, equivalent to the Latin *quadri*-.]

Tétrad. s. Four of anything taken collectively.

Four here takes place again in the assemblage of the masculine and feminine numbers; whence I further conceive that, under the number of this more complex *tétrad*, he [Pythagoras] taught his disciples the mystery of the whole creation.—*Dr. H. More, Conjectura Cabalistica*, p. 155: 1653.

Colours may best be expressed by a *tétrad*, the largest possible formula for things finite, as the pentad is the smallest possible form. Indeed, the *tétrad* of things finite is in all cases reducible to the pentad. The adorable *tétractys*, or *tétrad*, is the formula of God.—*Coleridge, Table Talk.*

Tétragonal. adj. [Gr. *τετράγωνος; γωνία* = angle.] Four square.

From the beginning of the disease, reckoning on unto the seventh day, the moon will be in a *tétragonal* or quadruple aspect, that is, four signs removed from that wherein the disease began; in the fourth day it will be an opposite aspect, and at the end of the third septenary *tétragonal* again.—*Sir T. Browne, Vulgar Errors.*

Tétralogy. s. [Gr. *λόγος* = word.] *Τετραλογία* is the term applied in the Greek drama to a regular production consisting of four

dramas, three of which were tragedies on the same general subject (e.g. the Agamemnon, the Orestes, and the Eumenides of Æschylus), and a comic drama (of the character of the Cyclops of Euripides) as the fourth.

He thus made up a total of four dramas or a *tetralogy*, which he got up and brought forward to contend for the prize at the festival.—*Grote, History of Greece*, pt. II. ch. lxvii.

Tetrameter. s. Verse consisting of four metres.

The first are complete interchanges of sixteen and fourteen feet; the second of equal *tetrameters*.—*Selden, Notes on Drago's Polyglottion*, m. iv. Phrynichus first introduced the measure of *tetrameters*; this he did because the trochaic foot is most proper for dancing, and the drama of this age was accompanied with dances characteristic and explanatory of the fable.—*Cumberland, Obscure*. (Ord MS.)

Tetrameter. adj. [Gr. *τέτρων* = metre.] Having four metres.

Every reader who has an ear for metre will easily perceive that it is written very exactly in verses of sixteen syllables without rhyme, in imitation of the most common species of the Latin *tetrameter iambic*.—*Typhill*.

Tetrapetalous. adj. [Gr. *πτεταλον* = leaf, petal of a flower.] In *Botany*. Having four petals.

All the *tetrapetalous* siliqueous plants are alkaliescent.—*Arbutus*.

Tetrarch. s. [Lat. *tetrarcha*; Fr. *tétrarque*; Gr. *τεταρχης*.] Roman governor of the fourth part of a province.

Pontius Pilate being governor of Judea, and Herod being *tetrarch* of Galilee, and his brother Philip *tetrarch* of Iturea and of the region of Trachonitis, and Lysanias the *tetrarch* of Abilene.—*Luke* iii. 1.

All the earth, Her kings, and *tetrarchs*, are their tributaries; People and nations pay them hourly stipends.

B. Jonson, Catiline's Conspiracy. They mocked him by kneeling about the streets a poor idiot dressed up with a paper crown and a reed for a sceptre, in ridicule of the *tetrarch's* rather doubtful right to the style of royalty.—*Sharpe, History of Egypt*, ch. xi.

Tetrarchy. s. Roman government of a fourth part of a province.

After his death the kingdom was divided by Augustus into *tetrarchies*; Archelaus being made *tetrarch* of Judæa, and the rest of the country divided between Philip and Antipas.—*Bishop Patrick, On Genesis*, xix. 10.

Tetrarchical. s. Belonging to a tetrarchy.

The whole isle was lately *tetrarchical*, four several kings availing their obnoxious sceptres in each tetrarchy.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 22.

Tetrasperous. s. [Gr. *σπέρων* = seed.] In *Botany*. See extract.

Tetrasperous [is] one of the forms of fructification found in some sea-weeds. It consists of little clusters of spores, in most cases four in number, but very rarely eight. Mr. Berkeley remarks that fruit of this form seems to be not mere modifications of the capsule, but rather of the nature of gemme, multiplying the individual without impregnation. It is called *tetrasperous*, and the separate bodies *tetraspores*. They are usually formed by the division (often unequal) of one globose endochrome, three of the four divisions only being in general visible, in which case the fruit is sometimes erroneously called *trispore*. When all four are visible at once the division is said to be *crucial*. In some genera, however, the oblong or elliptic endochrome is divided transversely, when the division is called *zonate* or *annular*. The *tetraspores* may be simply immersed in the frond, when they are called *seri*; or contained in external warts or excrescences, or in proper leaflets, or lastly, in elongated pod-like processes. It is in the last-named class that *tetraspores* are found.—*Muore, in Branda and Cor, Dictionary of Science, Literature, and Art*.

Tetrastich. s. [Gr. *τετράστιχος* = rank, row, line, versel.] Epigram or stanza of four verses.

The *tetrastich* obliged Spenser to extend his sense to the length of four lines, which would have been more closely confined in the complex.—*Pope*.

Tetrastyle. s. [Gr. *τετράστυλος* = pillar.] Building with four pillars in front.

Tetrasyllable. s. Word of four syllables.

To begin a line with a trochee, and (amble immediately following, which makes the *tetrasyllable* foot called *choriambic*, is beautiful, and very frequent in our best poets, e.g.:
'Daughter of God and man, accomplish'd Eve.'
'Maiden the sex, as children birds pursue,
Still but of reach, but never out of view.'

Muore, Essay. (Ord MS.)

The method and way of watering, pilling, breaking, and *towntawing* of hemp and flax, is a particular business.—*Mortimer, Handicraft*.

1. That out which a comment is written.

We expect your next
Should be no comment, but a *text*,
To tell how modern beasts are vex'd.
It is not immediately formed from the Troy Boko of Lydgate, as I have suggested in the *text*.—*T. Warton, History of English Poetry*. (Ord MS.)

Text-book. s. Book serving as a text for the purposes of teaching or reference; in the latter case the word suggests the notion of authority.

Gratian was a monk of Bologna, and his work, not the first collection of the kind, but the most complete and the best-arranged that had yet been compiled, was immediately introduced as a *text-book* in that university.—*Craik, History of English Literature*.

Text-hand. s. See second extract.

Once she writ only *text-hand*, when
She scribbled giants, and no men.

Cleveland, Poems, p. 22.

Text-hand [is] a particular kind of large hand-writing; not called, because formerly the *text* was ever written in a large hand, and the comment in a small. As *text-hand* is both square and round, it means little more than a large hand of each sort. The books of J. Bad. Ascensius, and of the other black-letter printers, give one a perfect notion of the reason of this name.—*Pegge*.

Textile. adj. [Lat. *textilis*; *texo* = I weave.] Woven; capable of being woven.

Textorial. adj. [Lat. *textorius*.] Belonging to weaving.

From the cultivation of the *textorial* arts among the orientals came Darwin's wonderful cloth.—*T. Warton, History of English Poetry*, vol. iii. p. 78.

Textrine. adj. [Lat. *textrina*.] Relating to weaving. *Rare*.

It is a wonderful artifice how newly-hatched maggots, not the parent animal, because she emits no web, nor hath any *textrine* art, can convolve the stubborn leaf, and bind it with the thread it weaves from its body.—*Derham, Physico-Theology*.

Textual. adj. [Fr. *textuel*.]

1. Contained in the text.

They seek to root and disarrange the wise and well-couched order of St. Paul's own words, instead of a certain *textual* risk to chop off the heads of the word prosopopoeia.—*Milton, Antimaculatus upon a Defence of the Humble Remonstrance*, § 3.

The Keri is the marginal reading; the Chetiv is the *textual* reading.—*Bishop Wakefield, Scripture Fulfilled*, pt. ii. p. 125.

Textualist. s. One ready in citing texts.

Textuary. adj.

Thallium. s. [A word of recent coinage, the *-um* being the technical and artificial termination in Chemistry, denoting that the word in which it is found is the name of a metal. The first part is from the Greek, *θαλλος* = shoot of a plant, sucker, twig, suggestive of *greenness*, inasmuch as the spectrum of thallium gives a brilliant green line.] See extract.

This metal was discovered by Crookes in 1861, in a deposit obtained from the sulphuric acid manufactory of Tilskester, in the Harz. The spectrum of this product furnished a singularly brilliant green line, which led him to examine it further, and suggested the above name. It has since been found in some varieties of pyrites and in the residue of the evaporation of certain mineral waters. It is a soft lead-like metal; its specific gravity between 11 and 12; its atomic weight 201; it tarnishes in the air; fuses at about 500°, and at about 600° takes fire and burns with a green light; in ductility, malleability, and tenacity, it much resembles lead. It forms alloys with most of the other metals. It forms two oxides, the most important of which is the protoxide (=TlO). This oxide is soluble in water, furnishing an alkaline liquor which absorbs carbonic acid; it is yellow when anhydrous, soluble in sulphuric, nitric and hydrochloric acids, and is thrown down from its solutions by sulphide of ammonium in the form of a dark brown sulphide. No precipitate is formed in solution of sulphate or nitrate of thallium by the caustic alkalis, but the carbonated alkalis give a precipitate in very concentrated solutions; chlorides, bromides, and iodides, give yellowish precipitates. The salts of thallium are very poisonous; they are colourless, when formed with colourless acids, and are easily decomposed by feeble electric currents. —*Brande and Cox, Dictionary of Science, Literature, and Art.*

Thallogene. s. [Gr. *θαλλος* + *γενος* = generation.] In *Botany*. Division of the flowerless plants containing the Algae, Fungi, and Lichens.

It is not easy to settle the limits of the alliance of the *thallogenes*. Linnæus and Jussieu laid but two divisions, viz. Algae (including Lichens) and Fungi; and they have been followed by some modern botanists, particularly Pries and Willebrandt. Others have been satisfied with separating the Lichens from Algae, which, indeed, was virtually done by most of them who acknowledge but two divisions, and with admitting three equally distinct groups. Some, on the contrary, have sought to multiply the orders, as Desmoulins and others, by introducing a tribe called Hypoxyla. . . . It is clear, however, that these groups are of very unequal degrees of importance, and that after all they must be reduced under the three great forms [Algae, Fungi, Lichens] whose existence is universally recognised. —*Lindley, Vegetable Kingdom.*

Thallogenes, seldom herbaceous, or provided with foliaceous appendages, foliaceous appendages, if present, destitute of stomata. Spores rarely producing a prothallus; and, if so, giving rise to a second order of spores, germinating at definite points. Sporogoniae not spiral. . . . There is certainly a distinction of root and stem in many, even of the simplest *thallogenes*. The root in Algae is often a mere budfast, but in other cases it penetrates into the soil and absorbs nutriment, and the same may be said of some of the simpler fungi. In the higher fungi this opposition is still more evident. —*Berkley, Introduction to Cryptogamic Botany*, p. 69, 71, and note; 1857.

Thallus. s. In *Botany*. See extract.

Those simpler plants which exist without dis-

tinction of leaf and stem are also destitute of flowers; they are equally without the breathing-pores so abundantly found in the skin of the more complex species, and they multiply by the spontaneous formation in their interior, or upon their surface, of reproductive spherulids called spores. Among the many names that botanists have given to such plants, that of *thallogenes* has been preferred. A *thallus* is a fusion of root, stem, and leaves, into one general mass; and that is much the nature of these elements of vegetable structure. —*Lindley, Vegetable Kingdom.*

Thames on fire. The probable propriety of disconnecting this from the name of the river, and connecting it with *Tummy* may be seen under *Fire*. *Tummy* itself is from the French, *catamine*; whence, also, *Tamine* and *Stammell*.

Sackville Maine was the best of hosts. He agreed in everything everybody said, altering his opinions without the slightest reservation upon the slightest possible contradiction. He was not one of those beings who would emulate a Schölen or a Friar Bacon, or act the part of an incendiary towards the Thames his neighbour—but a good, kind, simple, honest, easy fellow—in love with his wife—well-disposed to all the world—content with himself, content even with his mother-in-law. —*Thackeray, Book of Snobs*, ch. xii.

'I'll be frank with you,' said Catbail, emptying the last of the decanter into his glass as he spoke. 'I'll be frank with you. We've got coal; whether it be much or little, there it is; as to quality, as I said before, it isn't Cardiff. It won't set the Thames on fire, any fellow—In love with his wife—well-disposed to all the world—content with himself, content even with his mother-in-law. —*Thackeray, Book of Snobs*, ch. xii.

Than. conj. Particle denoting comparison, and, as such, preceded either by an adjective in the comparative degree, or comparative in sense. For its origin as a case see last extract.

Were we not better to fall once with virtue,
Than draw a wretched and dishonour'd breath?

B. Jonson, Catiline's Conspiracy.
More true delight in that small ground,
Than in possessing all the earth was found.

Daniel.
I love you for nothing more than for the just esteem you have for all the sons of Adam.—*Swift.*
The Anglo-Saxon adverbs are *sæne* and *þæne* = when, then. The masculine accusative cases of the relative and demonstrative pronouns are *sæne* (*sæne*) and *þæne* (*þæne*). Notwithstanding the difference, the first form is a variety of the second; so that the adjectives *sæne* and *þæne* are pronominal in origin. As to the word *than*, the conjunction of comparison, it is a variety of *thæn*; the notions of order, sequence, and comparison being allied. 'This is good; then (next in order) that is good,' is an expression sufficiently similar to 'This is better than that' to have given rise to it.—*Dr. R. G. Latham, English Language*, § 505.

Than. prep. If the extracts from Swift and Prior, with the like of them, are to pass on authority as accurate English, this word is a preposition as well as a conjunction.

No conjunction can govern a case. A word that governs a case, be it ever so like a conjunction, is . . . a preposition. *Than*, in respect to its etymology, is neither more nor less than *thæn*. It is not difficult to see the connection in some between such sentences as 'I like this better than I like that,' and 'I like this—*thæn* (afterwards or next in order) like that.' *Than* is sometimes treated as a preposition when it governs a case.

Thou art a girl as much brighter *than* her,
As he is a poet sublimer *than* me. (Prior.)
You are a much greater *lower* *than* me. (Swift.)
It is better, however, to treat it as a conjunction, in which case the noun which follows it depends upon the verb of the antecedent clause. 2. 'I like you better *than* he.' 'I like you better *than* him.' 'I like you better *than* I like him.'—*Dr. R. G. Latham, English Language*, § 763.

Thane. s. [A.S. *þegn*; connected by some with the German *diener* = serve; by others with *degen* = sword.] Term in Anglo-Saxon, applied to the members of two classes in the body politic, the lower of which corresponded with the higher gentry rather than with the nobility, the latter more decidedly noble; baron has generally been given as the Anglo-Norman equivalent. The term kept current in Scotland longer than in England.

Thane was the title of those who attended the English Saxon kings in their courts, and who held lands immediately of those kings; and therefore in Domesday they were promiscuously called *Thani* or *Servientes Regis*, though not long after the Conquest the word was disused; and . . . instead thereof those men were called *Barones Regis*, who, as to their dignity, were inferior to earls, and took next after bishops, abbots, barons, and knights. There were also *Thani* minors, and these were likewise called *barones*. These were lords of manors . . . in their courts, which to this day are called courts-baron. —*Jacob, Law Dictionary.*

There were but two denominations of persons above the class of servitude, *thanes* and *eorls*; the owners and the cultivators of land, or rather, perhaps, as a more accurate distinction, the gentry and the inferior people. Among all the northern nations, as is well known, the werewild, or compensation for murder, was the standard measure of the gradations of society. In the Anglo-Saxon laws we find two ranks of freeholders; the first, called King's *Thanes*, whose lives were valued at 1200 shillings; the second of inferior degree, whose compensation was half that sum. That of a eorl was 200 shillings. The nature of this distinction between royal and lower *thanes* is very obscure; and I shall have something more to say of it presently. However, the *thanes* in general, or Anglo-Saxon gentry, must have been very numerous. A law of Ethelred directs the sheriff to take twelve of the chief *thanes* in every hundred, as his assessors on the bench of justice. And from Domesday Book we may collect that they had formed a pretty large class, at least in some counties, under Edward the Confessor. . . . The word *thane* corresponds in its derivation to *vassal*; and the latter term is used by Æsopius, the contemporary biographer of Alfred, in speaking of the nobles of that prince. In their attendance, too, upon the royal court, and the fidelity which was expected from them, the King's *thanes* seem exactly to have resembled that class of followers, who, under different appellations, were the equals as well as courtiers of the Frank and Lombard sovereigns. But I have remarked that the word *thane* is not applied to the whole body of gentry in the more ancient laws, where the word *Eorl* is opposed to the *Eorl* or roturier, and that of *Sithelmund* to the royal *thanes*. . . . In almost every page [of Domesday Book] we meet with tenants either of the crown, or of other lords, denominated *thanes*, freeholders (liberi homines) or sergents (sergenants). —*Hallam, View of the State of Europe during the Middle Ages*, pt. i. ch. vii.

The *Thanes* were the lords of the townships that have been described; and their local dignity and power must have been, practically, even more important than their share in the general government of the commonwealth. But while we observe the strong influence of the aristocratical element in the Anglo-Saxon polity and social system, we must always remember that this superior body of the *Thanes* was not an exclusive caste or a strictly hereditary noblesse. It is an aristocracy of the best kind; an aristocracy always open to receive recruits from the ranks below it. Any earl who could acquire a certain amount of landed property, might become a *Thane*; and the successful merchant could raise himself to the same rank.—*Sir E. S. Creasy, History of England*, vol. i. ch. vi.

Applications of the term from Scotland.

Stay, you imperfect speakers! tell me more.
By Smeil's death I know I'mthane of Glamis;
But how of Galloway, the *thane* of Galloway lives,
A prosperous gentleman?

Shakespeare, Macbeth, l. i.
Thane, thayne. 1. A title of honour, used among the ancient Scots, which seems to have been at first equivalent to Latin *comes*, as denoting presidency in a county, and sometimes in a province, as well as the command of the forces and collection of the royal revenues raised in the district. (Wytown.) 2. An officer not superior in rank to a knight, who has been viewed as serving under the superior *thane*. (Stat. Alex. II.) —*Jamieson, Dictionary of the Scottish Language.*

The trusty band [of North British members of Parliament] in both Houses were actually bound adhering to him [Pitt] against the existing Government [Addington's]; nay, he held the prizes of many Scotch peers in open opposition! Will might his colleague exclaim to the hapless Addington, in such unwholesome of troubles, 'Doctor, the *Thanes* fly from us.'—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.* Dundee.

Thaneland. s. See extract: (entered in the previous edition, by Todd, as if only found in the plural; there is no reason, however, against such a word as *thane-land*).

Thanelands were such lands as were granted by charters of the Saxon kings to their *thanes* with all immunities, except the threatened necessity of expedition, repair of castles, and mending of bridges.—*Cowell.*

Thaneship. s. [A.S. *þegenscipe*.] Office and dignity of a *thane*; seigniorship of a *thane*.

The *thanship* of Glamis was the ancient inheritance of Macbeth's family.—*Shakespeare, Notes on Shakespeare.*

Dryden.
That Portugal hath yet no more than a suspension of arms, they may *thank* themselves, because they came so late into the treaty; and, that they came so late, they may *thank* the Whigs, whose false representations they believed.—*Swift.*

Thank, and Thanks. s. [A.S. þanc, plural þancas.]—Often plural than singular; at present, perhaps, exclusively plural. The extracts, however, show that the singular form is less uncommon than is generally supposed. They belong to the previous editions, and seem to have been chosen for the purpose.] Acknowledgment, or acknowledgments, of a favour received, or kindness shown; feeling, or expression of gratitude.

The fool saith, I have no friends, I have no *thank* for all my good deed; and they that eat my bread speak evil of me.—*Revelations, xx. 10.*

Thanks be to God, which giveth us the victory.—*1 Corinthians, xv. 57.*

The poorest service is repaid with *thanks*.
Shakespeare, Twelfth Night, iv. 3.

Immortal *thanks*.—*Id., Paradise Lost, vii. 77.*

Acknowledgment paid for favour or kindness; expression of gratitude. *Thanks* is commonly used of verbal acknowledgment; gratitude, of real repayment. It is seldom used in the singular.—*Dr. Johnson.*

Thanks, for thank-you, or thank-ye, is a locution introduced, or re-introduced, within the last twenty years.

Happy be Thewiss, our renowned duke.—

Tharm. s. [see Thrum.] Intestines twisted for several uses.

That. pron. [Part of what has to be stated concerning this word is anticipated in the notice of It, and part anticipates what would otherwise be repeated under What.

The main part, however, is that the final *t*

is the same in the three words; and, also, that it is the same as the *d* in the Latin *id*, as in the *is*—he, *ea*—she, and *id*—it, in the Latin grammars. It is also the same as the Latin *d* in *quod*, in *qui*, *que*, *quod*. In other words it is no part of the root, but a sign of the neuter gender. This is all that we have in English. But in the Norse and German languages it is common. The indefinite article in Danish is *en* for the masculine or feminine (i.e. the common) gender, *ett* for the neuter. In the same language also the difference between the neuter and common gender (masculine and feminine) is expressed by the like addition of *t*; the masculine or feminine for *beautiful*, *fair*, *fine*, &c., being *skjøn*, the neuter being *skjønt*, and so on, throughout the whole range of adjectives. And so on, also, allowing for the difference during the older stages of the language (when the masculine and feminine were different), through all the stages of the Norse tongues—Swedish, Norwegian, Faroic, and Icelandic. In Modern German the sign of the neuter is *s*—masculine *schön*, neuter *schönes*; but that this *s* is fundamentally *t*, is shown by the older forms in *z*, a sign representing *ts*, or something closely akin to it. Meanwhile the common Latin and Greek sign of the neuter, *m* (*bonus, bona, bonum*), is utterly unknown. Meanwhile also, the *t*, as the inflexion for the German tongues, is found only among the pronouns in Latin and Greek. A safe generalization has been founded on this; viz. that whereas originally there were two neuter inflexions, one for the adjective and one for the pronoun, the Latin and Greek languages have adopted the adjectival one for both the pronoun and the adjective (retaining the other only as a fragment), the German languages have reversed the process, and (omitting the adjectival inflexion altogether) have not only retained the pronominal sign, but extended it to the adjectives.

In English, however, where the adjectives are absolutely indeclinable, the neuter in *t* is limited to the three pronouns already named. And the relations are curious; of the three, *it* is the only one which gives us the three genders, but these are disguised. For *He, she, it*, the Anglo-Saxon was *He, heo, hit*. Of these, *heo* in the current English is lost, and *hit* has dropped its initial *h*.

With the Relative, *who* serves for both the masculine and feminine; *what* being neuter. But *what* is superseded to a great extent by *which*.

In the word before us the Anglo-Saxon grammars give us, masculine *se*, feminine *seo* (*sio*), neuter *pet*. Of these, *seo* is the English *she*; the grammar, for the third personal pronoun running *he, she, it*, plural *they*; *that* being treated as a demonstrative pronoun rather than as a personal one. It is not difficult to see what this implies. It implies that certain inflexions were defective rather than irregular. *Se, seo, pet*, suggests an original *pe, heo, pet*. For this see *The*.

At present it is enough to repeat the statement that the *-t* in *that* is no part of the original word, but a sign of the neuter gender; that it implies a regular masculine and feminine; but that at present it is defective in this respect, that in Anglo-

Saxon it made good this defect by drawing upon other roots, and that in so doing it was a personal rather than a demonstrative pronoun.]

5. Opposed to *this*, as the other to one.

This is not fair; nor probable *that*;
Nor t' other question proper for debate.
Dryden, Translation of Parnassus, IV. 10.

6. When *this* and *that* relate to foregoing words, *this* is referred like *hic* or *ecce* to the latter, and *that* like *ille* or *ecce* to the former.—So stands the notice in the previous editions. It is doubtful, however, whether the rule is founded on a principle broad enough to make it general. The editor believes it to be artificial; founded upon the mere enumeration of certain instances, and contravening, rather than resting upon, any law of thought. That it would be useful, as an artificial rule in composition, if it could be enforced, is not denied. What *this* denotes is the nearest,

what *that* denotes is the most distant of two objects; and the way to ascertain the ordinary mode of thinking in this matter is to direct the antecedents of any meaning by which the connection of each with its proper pronoun is indicated, and then ask what the mere fact of relative position gives us. Thus, to one who has never heard of the rule before us, but who trusts his common sense only as to what is conveyed by such a pair of propositions as 'A is good, but B is better; for *this* is sweet, while *that* is both sweet and wholesome.' Which is A, and which is B? It is probable that the first step in such an inquiry is to substitute for *this* and *that* their nearest equivalents, viz. *the one* and *the other*. Surely, it would strike no one to say that *the one* was denoted by the *last*, and that *the other* was denoted by the *first* of the symbols. Rather the contrary; *this* and *that*, *the one* and *the other*, are little

more than *first* and *second*. It may be held, however, that notwithstanding this, when we use the combination A, B, *this* and *that*, that it is the last of the first two terms which is nearest to us when we attach to them a third and a fourth (i.e. a second pair). It is difficult to say how others think. The editor can only say that he has no doubts as to how he thinks himself; to him the nearer of the two terms is the one which presented itself as *this*; the more distant one, the one that followed us *that*.

In this scale gold, in t' other fame does lie.
The weight of *that* mounts *this* so high. *Cowley.*
The chief point of syntax connected with the pure demonstrative is one that is suggested by the following well-known quotation:—

Quocunque aspidas nihil est nisi pontus et aer;
Nubibus hic tumulus, fluctibus ille minax.
Here *hic* refers to . . . air; whilst *ille* . . . refers to . . . sea. On the strength of this example, combined with others, it is laid down as a rule in Latin that *this* refers to the last, and *that* to the first antecedent. What is the rule in English? Suppose we say 'John's is a good sword, and so is Charles's; *this* cut through a thick rope; *that* cut through an iron rod.' In determining to which of the two swords the respective demonstratives refer, the meaning will not help us at all; so that our only recourse is to the rules of grammar; and it is the opinion of the present writer that the rules of grammar will help us just as little. The Latin rule is adopted by scholars, but still it is a Latin rule rather than an English one. It is, probably, a question which no authority can settle; and all that grammar can tell us is, that *this* refers to the name of the idea which is logically the most close at hand, and *that* to the idea which is logically the most distant. What constitutes nearness or distance of ideas—in other words, what determines their sequence—is another question.—*Dr. R. G. Latham, English Language, § 818; 1862.*

Even in Italy, where from the size of her cities,
and social refinements of her inhabitants, greater
elegance and splendour in building were justly to

ages did not attain any perfection. In several

suffered consequently from destructive fires.—

Were thickly covered, one and all;

Thaumatrope. s. [Gr. *ταύρω*, *ταύρος* = wonder + *τροπε* = I turn; *τροπή* = turning, turn, manner.] See extract.

Thaumatrope (in) the name given by Dr. Paris to an optical toy, the principle of which depends on the persistence of vision. A circle is cut out of a piece of card, to opposite edges of which two silk strings are fixed, by twisting which between the finger and thumb of each hand the disc is turned round with considerable velocity. On one side of the disc is drawn any object, as a chariot; on the other side, the charioteer in the attitude of driving; so that when the card is twirled round, we see the charioteer driving the chariot; or, in consequence of the duration of the impressions of light on the retina, we see at once what is drawn on both sides of the card.—*Sir D. Brewster, On Optics.*

The illusion by which this illusion is produced has been called the *thaumatrope*, from two Greek words meaning 'wonder' and 'turn'. It is difficult to trace the history of this discovery; but it is certain that it has been the result of a very old, simple, and well-known experiment. . . . The *thaumatrope* is capable of showing that binocular vision can detect to a degree hardly conceivable the most minute difference in the distance of objects, such as the distance between the planes of the two surfaces of a card, which distance is nothing more than the thickness of the card. —*A. Chandel, On Binocular Vision, in Proceedings of the Royal Society, April 11, 1867.*

From Hecla view the thawing deep;—
Thee, fond nymph! gladly I woo,
And again thy steps pursue. *Grainger*.

The. *art.* [At present this word is wholly uninflected, being the same for all cases, genders, and numbers. Originally, however, it belonged to the personal pronouns, and was as thoroughly declined as the Latin *hic*, *hæc*, *hoc*, or *qui*, *quæ*, *quod*. Moreover, the remains of this declension still exist; though with a difference of import, and, as different parts of speech. As for the itself, it must be sought for in the Frisian, rather than in the ordinary Anglo-Saxon; for in this latter language the masculine and feminine forms of the nominative singular of the definite article were not *pi*, (or *pe*) *pio*, (*peo*) but *se*, *seo*. The same was the case in the Icelandic, or Old Norse, where the forms were *M. se*; *F. en*; the neuter in both languages being *þat*. See *That*. *Se*, or the masculine form, no longer exists as such.

The feminine, *seo*, however, is word for word, the modern *she*; its import being slightly changed, just as in Latin *hæc* might supersede *illa*. The neuter nominative, as aforesaid, was *þat* = that. For the possessive, or genitive, masculine and neuter, the form was *þæ*, the *s* being the ordinary termination for this case. It no longer exists. For the genitive, as also, for the dative feminine, the word was *pere*. Let a substantive denoting place or direction, and also of the feminine gender, be supposed to have combined with it, and to have, subsequently, become obsolete (or, if not this, to have understood from the first), and it is easy to see how the present word *there*, originally the dative feminine of a pronoun, is now an indeclinable adverb. The dative for the masculine and neuter, was *þam*; no longer existent. The accusative for the neuter, according to the very general rule that that gender has its nominative and accusative alike, was *þæt*; the feminine accusative *þi*. The masculine was *þæne*, or *þone*. Substitute for the feminine noun denoting place, a masculine noun denoting time, and the history of the two existing adverbs is the same. Lastly, there was in Anglo-Saxon the form *þy*—a form sometimes called ablative, sometimes instrumental. Its commonest combination, however, was with an adjective or pronoun in the comparative degree; as, *þy mæ* = the more; *þy læsse* = the less. Out of this has grown the *the* in such combinations as 'the sooner the better,' 'the more the merrier;' combinations like the Latin 'eo majus,' 'eo minus,' &c.; the full import being 'by that much,' 'by so much.'

The glassy penthouse of ignoble form,
High on Ionic shafts he had it lower

Two broad piazzas in theatric curve,
Ending in equal porticos sublime. *Mason, The English Garden*, b. iv. p. 223.

Theatrical. *adj.* Theatrical.

tian Piety*.

Theatricals. (plural.) *s.* Apparatus con-
nected with the theatre: (commonly pre-
ceded by *private*, when it denotes the whole
dramatic representation, i.e. the acting as
well as the properties).

Such are the writers who, enjoying all the plea-
sures without the pains of composition, have often
apologised for their repeated productions, by de-
claring that they write only for their own amuse-
ment; but such private theatricals should not be
brought on the public stage.—*J. Diderot, Curiosities
of Literature*.

Theatricality. *adv.* In a theatrical manner;

Unconscious her look, her posture proud,
Her voice theatrically loud. *Pope, Imitation of the Earl of Dorset*.

Whom for the theft I wedded, stole these children. *Id., Cymbeline*, v. 5.

David in trade, a secret theft: extortion, an im-
pudent theft.—*Holaday*.

2. Thing stolen.

If the theft be certainly found in his hand alive,
whether it be ox, or ass, or sheep, he shall restore
double.—*Exodus*, xxi. 4.

Theine. *s.* [Tea.] See extract.

Theine [is] a crystalline principle peculiar to tea
and coffee and a few other vegetable substances. It
is identical with caffeine, has a slightly bitter taste,
and is sparingly soluble in cold water and in alcohol.

It melts at 454° C., and sublimates at a higher temperature. Calcium, or *theine*, is a very feeble base, forming crystallisable salts with sulphuric and hydrochloric acids.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Their, pron. Of them: (the pronoun possessive, from *they*).

The round world should have shook
Lions into civil streets, and citizens into their dens.

Shakespeare, Antony and Cleopatra, v. 1.

Theirs. Form derived from *their* (like *Its* from *It*), used when anything comes in construction between the possessive and substantive. See under *My*.

Prayer we always have in our power to bestow, and they never in theirs to refuse.—*Hooker, Ecclesiastical Polity*.

They gave the same names to their own idols which the Egyptians did to theirs.—*Sir W. Raleigh*.

The penalty to thy transgression due,
And due to theirs, which out of time will grow.

Nothing but the name of zeal appears
Twist our best actions and the worst of theirs.

Vain are our neighbours' hopes, and vain their fears,
The fault is more their language's than theirs.

Which established law of theirs seems too strict at first, because it excludes all secret intrigues.—*Dryden*.

And reading wish, like theirs, our fate and fame.

Their for *theirs*, both forms being used by the same writer, probably for the sake of the metre.

My clothing keeps me full as warm as theirs;
My merits unto my taste as pleasing are.

And my esteem I will not eluminate for theirs,
Whom fortune's are ten thousand more a year.

Théism. s. [Fr. *théisme*, from Gr. *theos* = God.] Acknowledgement of a God, as opposed to atheism.

Having laid down in this manner the general principles of *theism*, he says nothing of the particular doctrines of Christianity except in one verse.—*Lord Monboddo, Ancient Metaphysics*, iv. 387.

Théist. s. One who believes in, maintains, the doctrine of the existence of a God, as opposed to Atheist, who denies it. See, also, under *Theo*.

I purposed to have tendered my service as a priest, . . . without any stipend or wages, save only a room to have said my office in twice a day for our church, king, and country; as God hath enabled me (and his only be the praise therefore) in prisons, dungeons, fields, chambers, or ships upon sea, or land, among rebels, *theists*, atheists, philosophers, wits, masters of reason, puritans, &c. for these eighteen years daily to do.—*Isaac Martin, Letters*, p. 35: 1662.

The word *deist*, or *theist*, in its original signification, implies merely the belief of a God, being opposed to atheist; and so there may be deists of various kinds.—*Bishop Waterland, Christianity Vindicated*, p. 62.

Theistic. adj. Belonging to theists; relating to, constituted by, connected with, Theism.

From an abhorrence of superstition, he appears to have adopted the most distant extremes of this *theistic* system.—*T. Marton, Life of Sir Thomas Pope*, p. 208.

Theistical. adj. Theistic.

The *theistical* club have set this up as a principle.—*Leitch, Short Method with the Theists*.

It must appear at first sight, that nothing could be more contradictory to the first principles of the Christian religion, than those of the *theistical* or *sectarian* sects, which at that time prevailed very much both among the Greeks and the Romans; nor shall we find that the *theistical* sects were much less at enmity with it, when we consider the doctrines they held upon the nature of God and the soul.—*Lord Shaftesbury, Observations on the Conversation of St. Paul*.

Thème. s. [Gr. *thema*.]

1. Subject on which one speaks or writes.

Two truths are told,
As happy prologues to the swelling act
Of the imperial theme. *Shakespeare, Macbeth*, i. 3.
When a soldier was the *thème*, my name
Was not far off. *Id., Cymbeline*, iii. 3.

Oh! could I flow like thee, and make thy stream
My great example, as it is my theme:
Though deep, yet clear; though gentle, yet not dull;
Strong without rage, without o'erflowing full.

Sir J. Denham, Cooper's Hill.
Whatever near Eurata's happy stream,
With laurels crown'd, had been Apollo's theme.

Lord Bacon.
Though Tyber's streams immortal Rome behold,
Though foaming Hermus swells with tides of gold,
From heav'n itself though seven-fold Nilus flows,
And harvests on a hundred realms bestows;
These now no more shall be the nurse's themes,
Lost in my fame, as in the sea their streams.

Pope, Windsor Forest.
Every object of our idea is called a *thème*, whether it be a being or not being.—*Watts*.

4. Division for the purpose of provincial administration under the Eastern (Constantinopolitan) Empire, e.g., the Chaldean *Thème*, the Germanic *Thème*, and others.

The Prefect of Thrace was the most obsequious agent of his master's tyranny. Throughout that *thème* the monks were forced to abandon their vows of solitude and celibacy under pain of being blinded and sent into exile.—*Milman, History of Latin Christianity*, b. iv. ch. viii.

Themselves. s.

1. These very persons: (in this sense it is nominative).

Whatever evil befalleth in that, *themselves* have made themselves worthy to suffer it.—*Hooker, Ecclesiastical Polity*.

2. Oblique case of *they* and *selves*.

They open to *themselves* at length the way.

Such things as in *themselves* are equally true and certain, may not yet be capable of the same kind or degree of evidence as *we* are.—*Bishop Wilkins*.

Waken children out of sleep with a low call, and give them kind magic till they come perfectly to *themselves*.—*Locke*.

Then. adv. [see under *Than* and *The*.]

1. At that time.

The *then* Bishop of London, Dr. Laud, attended on his majesty throughout that whole journey.—*Lord Clarendon, History of the Grand Rebellion*.
Then, then a boy, within my arms I laid.

Dryden.

If an herb be cut off from the roots in winter, and *then* the earth be trodden down hard, the roots will become very big in summer.—*Bacon, Natural and Experimental History*.

3. In that case; in consequence.

If God's immediate speaking and writing argueth precepts, thus spoken or written, to be perpetually moral; *then* his not writing of precepts argueth them to be temporary.—*He*.

Had not men been fated to be blind,
Enough was said and done to inspire a better mind,
Then had our senses pierced the truth's true wind.

Dryden, Translation of the Æneid, ii. 71.
Had fate so pleased, I had been eldest born.

Id., Conquest of Granada, Part I. ll. 1.
If all this be so, *then* man has a natural freedom.

4. Therefore; for this reason.

Whiles *then* the apostle moves us to unity, and moves us also to an endeavour to it, he bestows upon us as well a discovery as an exhortation, showing us not only the end, but also the means.—*Holyday*.

If *then* His providence
Out of our evil seek to bring forth good.

Milton, Paradise Lost, i. 161.
Now *then* be all thy weighty cares away,
Thy jealousies and fears, and while you may,
To peace and soft repose give all the day.

5. At another time: (as, *now* and *then*, at one time and other).

Now shaves with level wing the deep, *then* soars.

Milton, Paradise Lost, ii. 634.

One while the master is not aware of what is done, and *then* in other cases it may fall out to be his own act.—*Sir K. L. Edmundo*.

6. That time: (it has here the effect of a noun).

Till *then* who knew
The force of those dire arms?

Milton, Paradise Lost, i. 63.

Thence. adv. [A.S. *þenness*; the *-ce* in this word, as in *hence* and *once*, represents an older *-es*, *whenn-es*, *henn-es*, *on-es*. Though the origin of the termination is thus disguised, its pronunciation is, probably, maintained; inasmuch as when, after the elision of the *e*, the words become sounded as monosyllables—*whens*, *hens*, *ons*—they run the chance of being pronounced *whenz*, *henz*, *onz*. The same is the case with *dice*, from *dye*, and *pence* for *pennies*.]

1. From that place.

Past by the oracle of God; I *thence*
Invoke thy aid. *Milton, Paradise Lost*, l. 12.
Surst he look, and *thence*, preventing fame,
By quick and painful marches hither came.

Dryden, Aurengzebe, l. 1.

2. From that time.

There shall be no more *thences* an infant of days.—*Isaiah*, lxx. 20.

3. For that reason.

Not to sit idle with so great a gift
Useless, and *thence* ridiculous about him.

Milton, Samson Agonistes, 1500.

From *thence* is a barbarous expression, *thence* implying the same, yet it wants not good authorities. (So stands the text in Johnson: the use of *from* is, probably, more prevalent at present than it was in his time).

From *thence*; from him, whose daughter
His tears promis'd him parking with her; *thence*
We have cross'd. *Shakespeare, Winter's Tale*, v. 1.
There plant eyes, all mist from *thence*
Purge and dispurse. *Milton, Paradise Lost*, iii. 63.

Thenceforth. adv. From that time.

Thenceforth this land was tributary made
To ambitious Rome.

given them to live upon, in such sort as shall become
good subjects, to labour *thenceforth* for their living.

—*Id., Vow of the Slave of Ireland*.

Will all be no more
Thenceforth, but in thy presence joy entire.

Milton, Paradise Lost, iii. 261.

From *thenceforth* is a barbarous corruption, though it has crept into books where it ought not to be found.

Avert
His lady eyes; resolving from *thenceforth*
To leave them to their own polluted ways.

Milton, Paradise Lost, xii. 108.

Men grow acquainted with these self-evident truths upon their being proposed; but whose—or does so, finds in himself that he then begins to know a proposition which he knew not before, and which from *thenceforth* he never questions. *Locke*.

Thenceforward. adv. Forward, or forth, from that time or place.

When he comes to the Lord's table, every communicant professes to repent, and promises to lead a new life *thenceforward*.—*Kellwell*.

Thencefrom. adv. From that place. *Rare*.

In the space of an hundred years, or thereabout, all the living upon the face of the earth are drawn *thencefrom* by the stroke of death.—*Smith, Portrait of Old Age*, p. 113.

Theo-, a prefix in composition; Gr. *theos* = God; the same word as Lat. *Deus*. The differences between the meanings of *Deist*, as opposed to a believer in revelation; and *Theist*, as opposed to *Atheist*, is a fair instance of the advantage a language may sometimes derive from having concurrent words from different languages.

Theobromine. s. Active principle of chocolate; i. e. Theobroma and Cacao: (formed like Caffeine and Theine from coffee and tea).

Theobroma, a word coined from Gr. *theos* and *broma*, food, is [the name of] a genus of Tropical American Bytneriaceæ. . . Theobroma Cacao was the first known species of this genus, and the cacao or cocoa of commerce is now usually said to be produced by it, though it is probable that several of the other species afford a considerable portion. . . Theobromine . . . a white bitter crystalline substance. Its composition C₁₀H₈N₂O₄.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Theocracy. s. [Gr. *theos* = I am powerful, rule, sway; in composition, *-cratia*; as *despot*

erosparia, dysposparia, &c.] Government immediately superintended by God.

A quiet calm subordination of saints and angels under that great theocracy.—*Hammond, Works*, iv. 488.

The characters of the reign of Christ are chiefly justice, power, and divine presence or conduct, which is called theocracy.—*T. Burnet, Theory of the Earth*.

Theocracy. s. [Gr. *κράτος* = mixture, incorporation.] See extract.

Theocracy, in ancient philosophy, [is] a term invented to signify that intimate union of the soul with God in contemplation, which was considered attainable by the newer Platonists. Similar ideas are entertained by the philosophers of India, and by many religious sects.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Theocratic. adj. Relating to a government administered by God.

The splendour of divinity shines through every part of this theocratic form.—*Bishop Warburton, Divine Legation of Moses*, b. v. § 2.

Theocratical. adj. Theocratic.

The government is neither human nor angelical, but peculiarly theocratical.—*T. Burnet, Theory of the Earth*.

Theodolite. s. [?] In *Surveying and Astronomy*. Instrument for measuring altitudes.

Nothing more than an accurate land-surveyor with his chain, sight, and theodolite, is requisite for such a plan as this.—*Burke, Reflections on the Revolution in France*.

The zenith sector and the theodolite are peculiar modifications of the altitude and azimuth instruments. The former is adapted for the very exact observation of stars in or near the zenith, by giving a great length to the vertical axis, and impressing all the circumference of the vertical circle except a few degrees of its lower part, by which a great length of radius, and a consequent proportional enlargement of the division of its arc is obtained. The latter is especially devoted to the measures of horizontal angles between terrestrial objects, in which the telescope never requires to be elevated more than a few degrees, and in which therefore the vertical circle is either dispensed with or executed on a smaller scale, and with less delicacy; while, on the other hand, great care is bestowed on securing the exact perpendicularity of the plane of the telescope's motion, by resting its horizontal axis on two supports like the piers of a transit-instrument, which themselves are firmly bedded on the spokes of the horizontal circle, and turn with it.—*Sir J. F. W. Herschel, Outlines of Astronomy*.

Theogony. s. [Gr. *θεογονία*.] Generation of the heathen gods: (chiefly known as the title of a poem of Hesiod's, and, as such, a proper rather than a common name).

The theogony of the heathens could admit of such different turns and figurative expressions, as suited the fancy and judgement of each philosopher or poet.—*Lord Shaftesbury*.

Theologaster. s. Quack in divinity, as a medicaster in physick; low writer or student in divinity.

Theologasters are not contented to see the sun and moon, measure their sight and biggest distance in a glass, calculate their motions, or visit the moon in a poetical fiction; but will transcend spheres, soar higher yet, and see what God himself doth. The Jewish theologists take upon them to determine how God spends his whole time.—*Burton, Anatomy of Melancholy*, p. 255.

Theologer. s. Theologian.

Ascribes the Jesuit allura, that it is the constant opinion of the theologers.—*Dr. H. More, Antislavery against Theism*, ch. ix.

Theologic. adj. Theological.

Upon what principles does he erect his very new explanation of theologic antiquity?—*Coventry, Philomou to Hyde, conversation* iv.

The most considerable part for this purpose in the chapter of Laws. Of which, under its theologic consideration, I know of nothing so complete and masterly as the first book of Hooker's Ecclesiastical Polity.—*Bishop Warburton, Letters to Bishop Hurd*, letter xiv.

John was allowed to devote himself to religious poetry, which was greatly admired, and to his theologic arguments in defence of innuence.—*Milman, History of Latin Christianity*, b. iv. ch. vii.

It is no more an order, according to popular theologists, than the prima minima, they allowing only seven ecclesiastical theologists.—*Agrippa, Peregrina Juris Canonici*.

Theologise. v. a. Render theological.

School-divinity was but Aristotle's philosophy theologized.—*Glanville, On the Pre-existence of Souls*, ch. iv.

Theologiser. s. One who theologizes.

We are taught by Eusebius that the ancient Egyptian theologists, whose religion was near of kin to that of the Chaldeans, if not borrowed of it, looked upon the sun and moon, when they worshipped under the names of Osiris and Isis, not only as the chief gods, but as the makers and governors of earth, if not of all of the rest of the universe.—*Hogel, Free Enquiry*.

Theologue. s. Theologian; one studious in the science of divinity.

The cardinals of Rome, which are theologues, friars, and schoolmen, call all temporal business, of wars, embassages, sherry, which is under their jurisdiction.—*Baron, Essays*.

Theology. s. [Gr. *θεολογία*.] Divinity.

The whole drift of the Scripture of God, what is it but only to teach theology? Theology, what is it but the science of things divine.—*Hooker, Ecclesiastical Polity*.

She was most dear to the king in regard of her knowledge in languages, in theology, and in philosophy.—*Sir J. Heyward*.

The oldest writers of theology were of this mind.—*Archbishop Tillotson*.

One great object that most of the schoolmen had in view was to establish the principles of natural theology by abstract reasoning. This reasoning was doubtless liable to great difficulties. But a modern writer, who seems tolerably acquainted with the subject, assures us that it would be difficult to mention any theoretical argument to prove the divine attributes, or any objection capable of being raised against the proof, which we do not find in some of the scholastic philosophers.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ix.

Theomachy. s. [Gr. *μαχη* = I fight; *μαχία* = battle.] The fight against the gods by the giants. (This is Dr. Johnson's definition from Bailey. It is used, however, for opposition to the divine will.)

To have all men happy or unhappy as they were our friends or enemies, and to give form to the world according to our own humours, is the true theomachy.—*Locke, Advancement of Learning*, b. ii.

Who can distrust or oppose this happiness of good men, so long since assured by Him, which is the Eternal God, blessed for ever? Surely none, without the guilt of theomachy or ingratitude.—*Life of Gregory, Posthumous*, preface, A. 3: 1640.

Theopathetic. adj. Theopathic.

(For example see under Theophrastus.)

Theopathic. adj. Connected with, relating to, theopathy.

Proposition 71.—To deduce practical rules concerning the theopathic affections—faith, fear, gratitude, hope, trust, resignation, love.—*Hartley, On Man*, pt. i. ch. iii. § 7. (Rich.)

He [Hartley] represents all the social affections of gratitude, veneration, love, inspired by the virtues of our fellow men, as capable of being transferred by association to the transcendent and unlimited goodness of the ruler of the world, and thus to give rise to piety, to which he gives the name of the theopathic affections.—*Sir J. Mackintosh*, (Rich.)

Theopathy. s. [Gr. *πάσχω* = suffering, from the root of *πάγω* = I suffer; *πα-σχω* = I suffer.] Passion excited by the contemplation of God.

Proposition 94.—To examine how far the pleasures and pains of theopathy are agreeable to the foregoing theory; under this class, I comprehend all those pleasures and pains which the contempla-

tion of God and his attributes, and of our relation to him, raises up in the minds of different persons, or in the same person at different times.—*Hartley, On Man*, pt. i. ch. iv. § 8. (Rich.)

Theophany. s. [Gr. *φάνω* = show; *φαινόμενος* = I appear, seem.] Manifestation of God.

With him [John Scot, Erigena] God is all things, all things are God. The Creator alone truly is: the universe is but a sublime theophany, a visible manifestation of God. He distinctly asserts the eternity of the universe; his diabolic proof of this he pretends to be irresistible. Creation could not have been an accident of the Deity; it is of his essence to be a cause: all things therefore have existed, do exist, and will exist through him their cause. All things flow from the infinite abyss of the Goodness, and are re-absorbed into it.—*Milman, History of Latin Christianity*, b. vii. ch. v.

This contemplation of God, the consummate perfection of man, is immediate, not mediate. Through the angels and the celestial hierarchy of the Aurgate it aspires to one God, not in his theophany, but in his inmost essence. All ideas and forms of things are latent in the human soul, as in God, only they are manifested to the soul by its own activity, its meditative power.—*Ibid.*, b. xiv. ch. iii.

Theophilanthropist, and Theophilanthropy. s. [Gr. *θεός* + *φίλος* = friend (*φίλος* = I love) + *άνθρωπος* = man.] See extract.

With a view of counteracting the latent fanaticism of the vulgar religion, the Directory gave great encouragement to a new sect recently established under the name of theophilanthropists. These religionists, rejecting all revelation, confined their worship to the one Supreme Being.—*Belsham, George III.*, 1797. (Rich.)

Theorbo. s. [Italian.] In Music. Lute for playing a thorough bass. See last extract.

Some that delight to touch the sterner wire chord, The cythron, the pandora, and the theorbo strike, *Dryden, Polydorus*, song iv.

You have put the theorbo into my mind, and I have played: you gave the musician the first encouragement: the music returned to you for patronage.—*Quarles, Emblems*. (Nares by H. and W.)

Off with her head, and then she hath a middle: As her waist stands she looks like the new fiddle, The favourite theorbo, truth to tell ye, Whose neck and throat are deeper than the belly.

Bishop Corbet, Her Boudoir. My hounds uncoupled and my hunsman ready, You shall hear such music from their tunable mouths.

That you shall say the viol, harp, theorbo, Ne'er made such ravishing harmony: from the grove

And neighbouring woods, with frequent iterations Kinnour'd of the cry, a thousand echoes Repeating it. *Mansing, The Guardian*, i. 1.

He wanted nothing but a song, And a well tuned theorbo hung Upon a bough, to ease the pain His tugged ears suffer'd with a strain.

Butler, Hudibras, l. 5, 165.

The first improvement on the French lute was the theorbo or Cithara biquina, so called as having two necks, the second or longest whereof sustains the four last rows of chords, which give the deepest and gravest sounds. Its use is to play thorough bass in the accompaniment of the voice. Brissard intimates that it was invented in France by the Sieur Hottentot, and thence introduced in Italy. But Kircher gives a different account of the matter, saying that it received its name from a certain Neapolitan who first doubled the neck of the trestle or lute, and added several chords to it. He says that the author of this improvement, with a kind of pun, gave to this instrument the name of theorbo from its near resemblance to a utensil so called, in which the flowers of Italy were wont, as in a mortar, to pound perfume. Kircher adds that Hieronymus Kappeler, a noble German, was the first that brought the theorbo into repute, and that in his time it had the preference of all other instruments. The strings of the theorbo, properly so called, are nine; nevertheless, there are many who double the base strings with an octave, and the small ones with a unison, in which case it assumes a new appellation, and is called the arch lute. Mercurius is extremely accurate in his description of the lute and the theorbo, but he has not noted the diversity between the latter and the arch-lute.—*Sir J. Mackintosh, History of Music*, vol. iii. p. 103.

Theorem. s. [Gr. *θεώρημα*.]

1. Position laid down as an acknowledged truth.

Having found this the head theorem of all their discourses, who plead for the change of ecclesiastical government in England, we build it necessary that the proofs thereof be weighed.—*Hooker, Ecclesiastical Polity*.

The chief points of morality are no less demonstrable than mathematical; nor is the subtilty greater in moral theorems than in mathematical.—*Dr. H. More, Divine Dialogues*.

2. Position requiring to be proved, as opposed to a problem wherein something has to be solved.

Theoretic. *adj.* Having the character of, relating to, a theorem.

Theoretic truth, or that which lies in the conceptions we have of things, is negative or positive.—*Gross.*

Theoretic. *adj.* Theoretical.

Admirably well turned, not only for the *theoretic*, but also the practical behaviour of cunning fellows.—*Tuller*, no. 191.

Theoretical. *adj.* Pertaining to, consisting in, theory; speculative; not practical.

Théorie, or Théorique. *s.* Speculation; not practice; theory. *Rare.*

The bookish *theoric*.

Wherein the topped combs can pry
As mastery as he; meer prattle, without practice,
Is all his soldiery.—*Shakespeare, Othello*, l. 1.

When he speaks,

The air, a charter'd libertine, is still;
And the mute wonder lurketh in men's ears,
To steal his sweet and howled sentences:
So that the act and practick part of life
Must be the mistress to this *theorique*.

(*Id.* *V. i. l.*)

Theoretically. *adv.* In the manner of, as a theory.

Able to discourse *theoretically* of the dimensions, situation, and motion, of the whole terrestrial globe.—*Boyle, On the Study of Holy Scripture*, p. 117.

Theorist. *s.* Speculatist; one given to speculation.

The greatest *theorists* have given the preference to such a government as that which obtains in this kingdom.—*Addison*.

It is a curious circumstance that a man [Dudley North] who, as a *theorist*, was distinguished from all the merchants of his time by the largeness of his views and by his superiority to vulgar prejudices, should, in practice, have been distinguished from all the merchants of his time by the obtuseness with which he adhered to an ancient mode of doing business, long after the duldest and most ignorant plodders had abandoned that mode for one better suited to a great commercial society.—*Macaulay, History of England*, ch. 22.

'What, Charley, you want to puzzle us by the interjectory plan? You must know, Charley, he is a great *theorist*. He has a project for settling the eastern difficulty by making Lamartine king of Syria.'—*Murray, Singlton Fontenay*.

Theorize. *v. n.* Entertain, indulge in, theories, or any particular theory.

Were a theory open to no objection it would cease to be a theory, and would become a law; and were we not to *theorize*, or to take generalized views of natural phenomena until those generalizations were sure and unobjectionable,—in other words, were laws,—science would be lost in a complex mass of unconnected observations, which would probably never disengage themselves.—*Groves, Correlation of Physical Forces*.

Theorizer. *s.* One who theorizes; one who indulges in theory rather than in practice; theorist.

For . . . mineralogy . . . Novalls . . . had a great fondness . . . he seems to have prosecuted it on a great and original plan, very different both from that of our little *theorizers* . . . generalizers, and that of the still more melancholy class, who merely 'collect facts,' and for the torpor or total extinction of the thinking faculty, strive to make up by the more assiduous use of the blowpipe and goniometer.—*Curlye, Critical and Miscellaneous Essays, Novatia*.

Theory. *s.*

1. Speculation; scheme; plan or system yet subsisting only in the mind: (opposed to practice).

If they had been themselves to execute their own theory in this church, they would have seen, being nearer.—*Hooker, Ecclesiastical Polity*.

In making gold, the means hitherto propounded to effect it are in the practice full of error, and in the theory full of unsound imagination.—*Bacon, Natural and Experimental History*.

Practice alone divides the world into virtuous and vicious; but as to the theory and speculation of virtue and vice, mankind are much the same.—*South, Sermons*.

2. Opposed to *hypothesis*; in which case it means that which will not merely explain certain phenomena, but which has some evidence to support it over and above such explanation.

It seems to me a great delusion to call or suppose the imagination of a subtle fluid, or molecules pene-

trable with the same, a legitimate hypothesis. It is a mere sufficiency. Newton took the fact of bodies falling to the centre, and upon that built up a legitimate hypothesis. But was a supposition of something certain. But Descartes' vortices were not an hypothesis; they rested on no fact at all; and yet they did, in a clumsy way, explain the motions of the heavenly bodies. But your subtle fluid is pure gratuitous assumption; and for what use? It explains nothing. . . . The use of a theory in the real sciences is to help the investigator to a complete view of all the hitherto discovered facts relating to the science in question; it is a collected view, *Scopia*, of all he yet knows in one. Of course, whilst any pertinent facts remain unknown, no theory can be exactly true, because every new fact must necessarily, to a greater or less degree, displace the relation of all the others. A theory, therefore, only helps investigation; it cannot invent or discover. The only true theories are those of geometry, because in geometry all the premises are true and unalterable.—*Ciderius, Table Talk*.

Theosoph. *s.* Theosophist.

Theosophical. *adj.* Wise after the manner of a theosophist.

There is a various intertexture of *theosophical* and philosophical truths.—*Dr. H. More, Conjectura Cabalistica*, p. 104: 1653.

Theosophism. *s.* Theosophy, for which it is a term of disparagement.

Many traces of the spirit of *theosophism* may be found through the whole history of philosophy; in which nothing is more frequent than fantastical and hypercritical pretensions to divine illumination.—*Engel, History of Philosophy*. (Rich.)

Theosophist. *s.* One who cultivates, or affects, theosophy; one professing to hold intercourse with God and heavenly spirits.

This disease [enthusiasm] many of your chymists and several *theosophists*, in my judgement, seem very obnoxious to, who delude their own conceits and fancies so magnificently and imperiously, as if they were indeed authentic messengers from God Almighty.—*Dr. H. More, Discourse on Enthusiasm*. (Rich.)

Theosophist [is] a name which has been given, though not with any very definite meaning, to that class of mystical religious thinkers and writers who aim at displaying, or believe themselves to possess, a knowledge of the divinity and his works by supernatural inspiration. In this they differ from the mystics who have been styled *theopathic*, whose object is passively to receive the supposed communication of the divinity and expatiate on the results. The best-known names at this day of the theosophic order are those of Jacob Bohme, Madame Guyon, Swedenborg, Saint-Martin, Schelling and others, who regarded the foundation of their metaphysical tenets as resting on divine intuition, have been called *theosophists*, but with less exactness.—*Brandes and Cox, Dictionary of Science, Literature, and Art*.

Theosophy. *s.* [Gr. *sofia* = wisdom; *sopho* = wise.] System of thought considered by those who cultivate it to partake of the nature of divine knowledge. When the emotions are largely affected by it, it approaches Theopathy: (for example see the second extract under Theosophist.

In the opposite direction, where it is supposed to be a substitute for inductive investigation, the chief example is Paracelsus, whom Brucker expressly calls 'the prince of the theosophers'. But Xenophanes, his *theosophy* or divine philosophy, is most fully declared by Simplicius.—*Cudworth, Intellectual System*, p. 371. (Rich.)

The strange chaotic nature of the man is displayed in his scepticism and *theosophy*.—*Curlye, Critical and Miscellaneous Essays, Writings of Werner*.

Therapeutic. *adj.* [Gr. *θεραπευτικός*; *θεραπειν* = I tend as healer, heal.] Curative, relating to, connected with, aiming at, the cure of disease.

Therapeutic or curative physick restoreth the patient into sanity, and taketh away diseases actually affecting.—*Sir T. Browne*.

Medicine is justly distributed into prophylactic, or the art of preserving health; and *therapeutic*, or the art of restoring it.—*Watts*.

It is objected, that Shilo affirms that his *therapeutic* sect prayed only twice a day, whereas it is very well known that the primitive Christians had their several other hours of prayer.—*Parker, Law of Nature*, p. 247. (Ord MS.)

Therapeutical. *adj.* Therapeutic.

This remedy, in my opinion, should rather be prophylactic, for prevention of the disease, than *therapeutical* for the cure of it.—*Chilmead, Translation of Ferrand, On Love Melancholy*, p. 336: 1676.

Therapeutics. *s.* [see Chromatica.] Part of medicine which deals with the treatment, cure, or attempted cure, of diseases: (as opposed to the *pathological* part).

Such was medical investigation, before physiology and natural history began to be cultivated as branches of general knowledge. The only questions examined were, what diet is wholesome, or what medicines will cure some given disease. . . . And in politics, the questions which engaged general attention were similar. Is such an enactment, or such a form of government, beneficial or the reverse—either universally, or to some particular community? without inquiry into the general conditions by which the operation of legislative measures, or the effects produced by forms of government, are determined. Students in politics thus attempted to study the pathology and *therapeutics* of the social body, before they had laid the necessary foundation in its physiology; to cure disease, without understanding the laws of health.—*J. S. Mill, System of Logic*, pt. vi. ch. vi. § 1.

4. It is used at the beginning of a sentence with the appearance of a nominative case, but serves only to throw the nominative behind the verb: as, 'A man came,' or, 'There came a man.' It adds however some emphasis, which, like many other idioms in every language, must be learned by custom, and can hardly be explained. It cannot always be omitted without harshness: (as, 'In old times *there* was a great king').

For reformation of error *there* were that thought it a part of Christian charity to instruct them.—*Hooker, Ecclesiastical Polity*.

There can only be the predicate of a proposition, differing in this respect from it. Hence it never affects the number of the verb, which is determined by the nature of the subject: 'There is this'—'There are these' . . . Furthermore, although a predicate, *there* always stands in the beginning of propositions; i. e. in the place of the subject.—*Dr. E. G. Latham, The English Language*, § 68: 1862.

2. Connected with, relating to, heat in general.

Thermo-electricity. *s.* See extract.

When the junction of two dissimilar metals is heated or cooled, the free ends being joined by a wire, an electric current is generated. This development of electricity by heat was discovered by Prof. Seebeck in 1822, and has received the name of *thermo-electricity*; in its theoretical and practical applications it is a fact of great importance. The intensity of the thermo-electric current depends on two things: the nature of the metals employed, and the difference in temperature which exists between the two ends of the metal bars. The metals have been found by experiment to stand in the following thermo-electric order: bismuth, nickel, German silver, brass, lead, tin, copper, platinum, silver, zinc, iron, antimony, tellurium, selenium. If two of these metals be taken, the more distant their position in the list the stronger is the current that will be generated. Hence the electro-motive force of bismuth and selenium is the greatest; but as it is generally impracticable to couple the last two metals on the list, bismuth and antimony form the usual thermo-electric couple. *Frankland, in Brands and Co., Dictionary of Science, Literature, and Art*.

Thermometer. *s.* [Gr. *μέτρον* = measure.] Instrument for measuring the heat of the air, or of any matter.

A *thermostat*, the principle of which depends on the unequal expansion of metals by heat, was proposed by Dr. Ure for regulating the safety valves of steam engines with more certainty than the common expedients.—*Hirst, in Brando and Cox, Dictionary of Science, Literature, and Art*.

Thermion. *s.* [see Chromatics.] Doctrine, philosophy, of heat.

I shall, then, successively, have to speak of the ideas which are the foundation of geometry and arithmetic; . . . of the ideas on which the mechanical sciences . . . more peculiarly rest; . . . of the ideas which the secondary mechanical sciences (acoustics, optics, and thermionics) involve; namely, the ideas of the externality of objects, and of the media by which we perceive their qualities.—*Whewell, History of Scientific Ideas*, vol. i. p. 82: 1838.

As optics relate to the phenomena which result from the action of light upon matter, so under the term *thermionics* may be included those effects which are caused by the action of heat upon matter.—*Hirst, in Brando and Cox, Dictionary of Science, Literature, and Art*.

These. *pron.* Collective form of *this*; as the difference between them consisting as in *goose*, *geese*; *mouse*, *mice*, &c., in the change of the vowel rather than in the addition of any plural sign; the final *s* being common to both numbers.

1. Opposed to *those*, or to some others. Did we for these barbarians plant and sow? On these, on these our happy fields bestow?—*Dryden, Translation of Virgil, Eclogues*, l. 97.

Thésipian. *adj.* Connected with Thespis, the inventor of the Greek comedy, and, as such, a *proper* rather than a *common* name; used, however, somewhat rhetorically for theatrical, or dramatic.

Yes, France is free. O glorious France, that has burst out so; into universal sound and smoke; and attained—the Phrygian cap of liberty! In all towns, trees of liberty also may be planted; with or without advantage. Said we not, it was the highest stretch attained by the Thésipian art on this planet, or perhaps attainable?—The Thésipian art, unfortunately, one must still call it; for behold there, on this Field of Mars, the national banners, before there could be any swearing, were to be all blessed.—*Carlyle, The French Revolution*, pt. ii. b. l. ch. xii.

Thésical. *adj.* Laid down; positive. This law . . . was merely *thésical* or positive, not indispensable and natural.—*Dr. H. More, Conjectura Cabalistica*, p. 127: 1633.

Both of these, the goetic and *théurgic*, seem to be of Egyptian origin; and it is evident, at least, that their practitioners appeared to prize themselves on drawing their chief secrets from that ancient source; and both are intimately connected with astrology.—*Lord Lytton, Last Days of Pompeii*, notes.

Théurgical. *adj.* *Theurgic*. The reason of their calling inspiration by the names of fire, flame, flash, and the like, may be easily found in the authors of the *théurgical* sciences.—*Daubuisson on the Revelations*, edited by P. Lancaster, p. 52.

Théurgist. *s.* One who is addicted to *theurgy*. More refined necromancers or magicians call themselves *théurgists*; . . . thinking to have to do only with good spirits.—*Hallucell, Melampus*, p. 50.

Théurgy. *s.* [Gr. *θεουργία*; *εργον* = work.] The power of doing supernatural things by lawful means, as by prayer to God.—This is Dr. Johnson's definition from Bailey. But the meaning also is a species of magic, in old times, which was employed for the assistance of supernatural beings to effect wonderful things.

Porphyry and some others did distinguish these two sorts, so as condemn indeed the grosser, which they called *magick* or *gouty*; but allowed the other, which they termed *théurgy*, as laudable and honourable, and as an art by which they received angels, and had communication with the gods. Yet St. Austin assures us, they are both damnable.—*Hallucell, Melampus*, p. 51: 1682.

Different languages have different modes of expressing indeterminate propositions. In Greek, Latin, and English the passive voice is used.—*Arystar, Diction*, it is said. The Italians use the reflexive pronoun, as, *si dice*—it says itself. Sometimes the plural pronoun of the third person is used. Thus, in our language, they say—the world at large says.—*Dr. R. G. Latham, The English Language*, § 606: 1862.

I allude to the discoveries made by Political Economy; a branch of knowledge with which even the wisest of the ancients had not the least acquaintance, but which possesses an importance it would be difficult to exaggerate, and is, moreover, remarkable as being the only subject immediately connected with the art of government that has yet been raised to a science. The practical value of this noble study, though perhaps only fully known to the more advanced thinkers, is gradually becoming recognized by men of ordinary education; but even those by whom it is understood, seem to have paid little attention to the way in which, by its influence, the interests of peace, and therefore of civilization, have been directly promoted.—*Buckle, History of Civilization in England*, vol. i. ch. iv.

A *throne* where kings, our earthly gods, were
crown'd.

Dryden, Epistles, To Dr. Charleson, 47.

With the denoting the royal power.

The proper business of the House of Commons
was to petition for redress of grievances as much as
to provide for the necessities of the crown. In the
present notion of English law, no writ is sup-
posed to proceed from the source of right. The
throne is first upon a pinnacle, which perpetual
beams of truth and justice irradiate, though corrup-
tion and partiality may occupy the middle region,
and cast their chill shade upon all below.—*Milnes,
View of the State of Europe during the 17th
Ages, pt. iii. ch. viii.*

Hear, all ye angels, progeny of light,
Thrones, dominations, principates, virtues, powers,
Milton, Paradise Lost, v. 600.

The primal godhead, the Trinity in Unity, was
alone absolute, infinite, inconceivable; alone re-
sential purity, light, knowledge, truth, beauty,
goodness. These qualities were communicated in
larger measure in proportion to their closer approxi-
mation to itself, to the three descending trials which
formed the celestial hierarchy;—1. The seraphim,
cherubim, and *thrones*. 2. The dominations, vir-
tues, powers. 3. Principalities, archangels, angels.

This celestial hierarchy formed, as it were, con-
centric circles around the unapproachable Trinity.
The nearest, and as nearest partaking most fully of
the divine essence, was the place of honour. The
thrones, seraphim, and cherubim approximated
most closely, with nothing intermediate, and were
more immediately and eternally conformed to the
godhead.—*Milman, History of Latin Christianity,*
b. xiv. ch. ii.

Suckled and cherish'd with air, and sun, and shower,

Pope, *Dunciad*, iv. 403.

Of thick short arms in thundering volleys float,
And roll themselves over her lubrick throat
In panting murmurs.

Will make his name not hard to find.

Made it less easily understood.

In nature's order as they pass'd along,
Their names, their fate.
Dryden, *Translation of the Æneid*, vi. 923.

Throng. adj. Much occupied. Provincial.
I demand what perfection can be in the spirits of
those just men to be overwhelmed in a senseless sleep;
or what a disproportionable and unimitable
representation it is of this throng theatre in heaven,
made up of saints and angels, that so great a part

be found drooping or quite drowned in an inactive
lethargy?—Dr. H. More, *Mystery of Godliness*,
p. 24: 1600.

matter, thus or thus prepared, should by a vital con-
gruity attract proportional forms from the world of
life, which is every where nigh at hand, and does
very throngly inebriate the moist and mucus
air.—Dr. H. More, *Conjectures Sollicitæ*, p. 37:
1653.

Small things with greatest) in Træssa strove,
With Jove's Alcides, and oft fall'd still rose,
Receiving from his mother earth new strength,
Fresh from his fall and fiercer grapple join'd,
Throttled as much in the air, expired and fell.
Milton, *Paradise Regained*, iv. 303.

His throat half throttled with corrupted phlegm,
And breathing through his jaws a belching steam.

The third variety is always symptomatic, generally of structural disease.—*Cooper, Dictionary of Practical Medicine.*

The usual torture [in Scotland] which was called

frame, into which wedges were driven, until the
bones were broken. But when James visited Scot-
land, an opinion began to grow up, that this was
too violent, and that other means must be devised.
The spirit which he communicated to his subordi-
nates, animated his immediate successors, and, in
1684, during his absence, a new instrument was in-
troduced, termed the thumbikin. This was com-
posed of small steel screws, arranged with such
diabolical art, that not only the thumb, but also
the whole hand, could be compressed by them, pro-
ducing pain more exquisite than any hitherto
known, and having, moreover, the advantage of not
endangering life; so that the torture could be fre-
quently repeated on the same person.—*Burke,
History of Civilization in England, vol. I, ch. iv.*

After this communicating, the king's smith was called
in, to bring in a new instrument to torture by the
thumbikin, that had never been used before. For
always the former was only to screw on two pieces

Thylacine, or Thylacinus. *s.* [Gr. *θύλαξ* = bag, pouch + *κύνων* = dog.] Marsupial animal of the genus *Thylacinus* (species, cynocephalus).

The *thylacinus* inhabits Van Diemen's Land, where it is called the tiger-hyena, and used formerly to be known among the colonists by the names of *salu-upumun* and *salu-wolf*. . . Mr. Gunn observes that the *thylacinus* is common in the more remote parts of the colony, and is often caught at Woolnorth and Hampshire hills. It usually attacks sheep in the night, but is also seen during the daytime; upon which occasions, perhaps from imperfect vision by day, its pace is very slow. . . Mr. Gunn says the devil (*Dasypus ursinus*) is destructive to sheep all over the colony, and is, indeed, the most destructive of our indigenous quadrupeds, the *thylacinus* being much scarcer.—*Waterhouse, in Naturalist's Library, Marsupials*.

The *thylacinus* has preserved its distinctness in the *thylacine*, but has coalesced with other elements of the temporal bone in the dog. A wide and deep groove divides the bulla from the tympanoid in the *thylacine*, but the sides of the tympanoid in the dog are swollen and abut against the large tympanic bulla. The articular cavity for the lower jaw is much nearer the occiput in the *thylacine* than in the dog, and the malar bones enter partially into their formation. There are two large vacuities in the back part of the bony palate in the *thylacine*, but this part is entire in the dog. The anterior foramina are larger in the *thylacine*, and much nearer the orbits than in the dog; they are also formed partly by the malar, and are not wholly perforated in the maxillary bone, as in the dog; the lacrymal bone is much larger in the dog, and encloses much more upon the face; the nasal bones are broader posteriorly in the dog, and extend further back, as compared with the maxillaries. The petrosals are much larger in the dog, and send bony plates into the tentorium, which plates are not present in the *thylacine*. The chief bony part of the tentorium projects from near the middle of the occiput, and does not reach the petrosal in the wild dog. The sella turcica is defined by the posterior clinoid processes in the dog, but not in the *thylacine*. The foramina optica and lacera anteriores are blended together in the *thylacine*, but are distinct in the dog. Although the olfactory chamber is so much larger in the *thylacine*, the rhinencephalic fossa is smaller than in the dog. The lower jaw, besides its greater length and slenderness in the *thylacine*, differs by the bending in of the angle, which is the characteristic of the Marsupials. In most of these distinctions the *thylacine* manifests its nearer affinity to the oviparous type of skeleton.—*Owen, Anatomy of Vertebrates*, vol. iii. p. 504.

Thyme. *s.* [Lat. *thymum*; Gr. *θύμος*, and *θύμος*.] Native plant of the genus *Thymus*; the wild plant has been called, with doubtful propriety, Mother of Thyme.

No more, my goats, shall I behold you climb
The steepy cliffs, or crop the flow'ry thyme.

Dryden, Translation of Virgil, Eclogues, l. 104.
The *thyme* hath a blunted flower, consisting of one leaf, whose upper-lip is erect, and generally split in two, and the under-lip is divided into three parts; out of the flower-cup arises the pistil, accompanied by four sepals, which afterward become so many seeds, inclosed in a husk, which before was the flower-cup; so these marks must be added hard lignous stalks, and flowers gathered into heads.—*Miller, Gardener's Dictionary*.

The wild *thyme* is common throughout temperate Europe and Asia, and Northern Africa. The common or garden *thyme*, which grows more erect than the wild *thyme*, is a native of Spain and Italy. . . The Romans were well acquainted with *thyme*, which was one of the plants recommended to be grown for the sake of bees. The lemon-scented *thyme* is a hardy dwarf trailing evergreen, possessing the most agreeable perfume of any of its genus. It has long been cultivated in this country, and is used for the same purposes as the other species. It obtains the greatest perfection when grown in dry light sandy soil.—*Brande and Cur, Dictionary of Science, Literature, and Art*.

Thyme. v. a. In the extract, cover, supply with thyme. *Rare*.

We bedd' the body with the food of one dish only; nor does the sedulous bee *thyme* all her thyme from one flower's sinuate vertice.—*Pollitham, Rosacea*, cent. i. xlii. (Ord M.S.)

Thymus. *s.* [Gr. *θύμος* = wart; Lat. *thymium*, both simple and as the second element in a compound, *acrothymium*.] In *Anatomy*. Gland without a duct, in front of the

lungs, decreasing or disappearing as age advances. See also Sweetbread.

The materials separated from the blood by the ordinary process of secretion by glands, are always discharged from the organ in which they are formed; and are either straightway expelled from the body, or if they are again received into the blood, it is only after they have been altered from their original condition, as in the case of the saliva and bile. There appears, however, to be a modification of the process of secretion in which certain materials are abstracted from the blood, undergo some change, and are added to the lymph, or restored to the blood, without being previously discharged from the secreting organ, or made use of for any secondary purpose. The bodies in which this modified form of secretion takes place are usually described as vascular glands, or glands without ducts; and include the spleen, the *thymus*, and thyroid glands, and the supra-renal capsules, and, according to Götterdiner, von Ecker, and Gail, the pineal gland, and pituitary body.—*Erker, Handbook of Physiology*, ch. xli.

The *thymus* in monotremes lies between the epipharynx and the beginning of the vessels from the aortic arch. In a kangaroo from the pouch Simon found the *thymus* on the pericardium with a medial lobe beside the two lateral ones. In rodents the *thymus* consists of two long lobes extending from the base of the heart, parallel with each other, forward, to the root of the neck. Bodies extending from this position to the posterior mediastinum and forward along the cervical vessels to near the mandible, but coexisting, according to Simon, of aggregations of fat-vesicles, undergo periodical increase in the mammals, prior to hibernation. In a bat dissected in March, Dr. H. Jones could not detect any certain homologue of a *thymus*; but found on each side of the root of the neck a yellowish lobulated mass consisting of conical lobes defined by ligamentary membranes; the lobes were hollow and filled by aggregations of colloid particles, which were not manifestly nucleated, nor provided with an envelope, but consisted of aggregations of oil-drops and molecules.—*Owen, Anatomy of Vertebrates*, vol. iii. p. 367.

That the connexions of the thyroid are from the first with the larynx and trachea, rather than with the *thymus*, is rendered more probable by the appearances observed in the young of animals. In a fatal rabbit, eight-tenths of an inch long, the *thymus* may be seen to consist of two lobulated masses, lying side by side just above the heart and its great vessels, broader at the base towards the trachea, diverging a little as they pass upwards, and ending in the root of the neck by a somewhat pointed extremity.—*Colleser, On the Thyroid Body, in Proceedings of the Royal Society*: 1867.

Thymy. adj. Abounding in thyme.

Where oft inhaled with Socratic sounds,
His pure devoted his tuneful stream
In gentler murmurs.

Akenside, Pleasures of Imagination, b. i.

He rolled upon the fragrant ground;
And then, with fond affection, stood
And view'd his image in the flood.

The scudding lark

A path as gently waving. *Mason, English Garden*.

Thyroid. *s.* [Gr. *θύρεα* = door + *ειδής* = form.] In *Anatomy*. Gland without a duct, in front and at the side of the larynx. See, also, under Sweetbread.

By examination of the *thyroid* body in the fœtus, we learn that it has from an early period much the same relations and appearances as belong to it in childhood, and during the adult condition, and we observe those diversities of its parts which are exceptionally recognized during the later periods of life. We may thus trace out the origin of such exceptional conditions, and notice, more especially, how the isthmus of Eustachius and the pyramid of Lalouette are connected with their after characters upon early changes during development of size.—*Colleser, On the Thyroid Body, in Proceedings of the Royal Society*: 1867.

Thysél. pron. Thou, personally.

Come high or low,

Then good *thysel* can on *thysel* bestow. *Dryden*.

Of beaming sunny rays a golden *tiar*
Circled his head. *Milton, Paradise Lost*, iii. 624.

A *tiar* wreathed her head with many a fold,
Her waist was circled with a zone of gold. *Pope*.

Tiara. *s.* [Lat. *tiara* and *tiaras*; Gr. *τίρα*; probably of Persian or Phrygian origin.] Bonnet of the old Persian kings and nobles.

Old Priam, and this golden sceptre bore
In full assembly.

Dryden, Translation of the Æneid, vii. 337.
Fairer she seem'd distinguish'd from the rest,
And better men discern'd, as better dress'd:
A bright *tiara* crown'd her forehead tied,
To *tiara* bands confin'd its rising pride.

And beside which, by wretched men were born
Sceptres, *tiaras*, swords, and chains, and tones
Of reason'd wrong, shod on by ignorance,
The ghosts of a no-more-remembered name,
Which, from their unworn obelisks, look forth
In triumph over the palaces and tombs
Of those who were their conquerors.

Shelley, Prometheus Unbound.
The State . . . may drag onwards, even when it has
reached the utmost goal, a worthless load of life; it
may aspire to the resemblance of that Nemean lion
to mear, who, from the *tiara* and the purple, came to
beard with lions. Like him, it may feel in harness;
and the Church of God must not seek to burn it,
but must still reverence the power legitimate,
though degraded and abused.—*Gloucester, The State
in its Relations with the Church*, ch. x. § 7.

Instead of rival pages contending for advance-
ment, page and antipope in eager haste to array
themselves in the *tiara*, all seemed to shrink from
the perilous dignity.—*Milman, History of Latin

The apostolic *tiara* devolved on the Cardinal
Pope, of the whole house of Conti, which had
given to the Holy See Innocent III.—*Ibid.* b. x. ch. i.

Tibia. *s.* [Lat. = flute.] In *Anatomy*. Bone
of the leg between the knee and ankle.

The *tibia* next to the femur is the longest bone in
the skeleton. . . situated at the anterior and inner side
of the leg, it alone receives from the femur, under
which it is placed vertically, the weight of the trunk,
and communicates it to the foot. Like the other
long bones, it is divided into a body and two ex-
tremities. The *tibia* articulates with the femur, the
fibula, and the astragalus. The *tibia* is formed from
one principal centre of ossification, with the two ad-
ditional ones for epiphyses. The process begins at
the middle of the bone, about the same time as in
the femur. M. Cruveilhier mentions a case in which
it preceded that bone, and from this point extended
over the shaft.—*Quain, Elements of Anatomy*, by
Sharp and Ellis, vol. i. pp. 150-151: 1854.

Tic, or Tic douloureux. *s.* [Fr.] In *Medicine*.
Neuralgic affection of the face.

Facial neuralgia.—Neuralgia faciei.—*Tic douloureux* is
perhaps cannot be better defined than as pain
varying in its character, always excessive, generally
intermittent; returning sometimes at regular inter-
vals, but more frequently after irregular periods;
seated in one of the branches of nerves of the face,
and extending in various directions through certain
of their ramifications; existing without evidence of
inflammation or of fever; and although occasionally
connected with cranial changes in some part related
to the affected nerve, yet as often occurring without
such morbid relations, or without any obvious con-
nexion with them, in some cases where they are
found to exist. . . The symptoms of *tic* are chiefly
the intensity and paroxysmal nature of the pain
constituting it. The pain occurs, or is exacerbated,
in fits; the accession of a various number of fits
constitutes an attack, which may be of uncertain
duration, and leave the patient comparatively well
in the intervals, which also are of uncertain con-
tinuance.—*Copland, Dictionary of Practical Medi-
cine*.

Tice. r. a. Entire.

What is in your lip
To *tice* the cowardly soul to dwell with morn
Ambition, than the yet unwither'd blush
That speaks the innocence of mine?

Edmund and Fletcher, Coronation.
Lovely enchanting language, sugar-cane,
Honey of roses, whither wilt thou fly?
Hath some fond lover tied thee to the haue?
And wilt thou leave the church, and love a sty?

G. Herbert.

Tichorrhine. *adj.* [Gr. *τίρυς* = wall + *ῥις*,
ῥις = nostril.] Term applied to an ex-
tinct species of rhinoceros, of which the
septum of the nostrils, being bony, is sug-
gestive of a wall.

The rhinoceros, like the elephant, was represented
1201

In pliocene and pleistocene times in temperate and northern latitudes of Asia and Europe by extinct species. One (*Rhinoceros leptorhinus*) associated with the Hippidamys major in fresh-water pliocene deposits; another (*R. tichorhinus*) with the mammoth in pliocene beds and drift. The discovery of the carcass of the *tichorhinus* rhinoceros in frozen soil is recorded by *Pallas—Owen, Paleontology.*

1. In *Zoology*. Arachnid, i.e. member of the class represented by the spiders, of the genus *Ixodes* (*ricinus*).

2. Variety of field bean; probably from its likeness in shape to the animal: (the castor-oil plant, with a similar seed, is named in botany, *ricinus*.)

The common or tick bean occupies the same position in England that the Scotch bean does in Scotland, and is frequently called the 'horse bean.' This and the preceding sort are probably from the same stock; soil, climate, and the continued operation of dissimilar causes for a lengthened period producing the difference which now exists between them. The tick bean is shorter staved than the Scotch bean, and said to be fully more prodigious, and also better adapted to light soils. The seeds are about one third smaller than those of the Scotch bean, weighing about eight grains each; they are also rounder, plumper, and less dimpled. The weight per bushel is about the same as the last mentioned Scotch bean. ... There are several varieties of the tick bean in cultivation, locally known under the following names: Harrow tick, flat tick, Essex tick, and French tick; but they are so much alike that a separate description is deemed unnecessary. —*Mortan, Cyclopaedia of Agriculture.*

Tidbit. s. See Titbit.

Tidal. adj. Constituted by the tide.

High water takes place at Jersey nearly half an hour before it reaches Chersey, and three-quarters of an hour before Alderney. The velocity of the tidal current, where not increased by narrow passages, is from two and a half to three miles per hour. —*Anders, The Channel Islands*, p. i. ch. i.

This is nearly the greatest amount of tidal drift that the Kingstown and Holyhead steamers are subject to. Their greatest drift is 8 1/2 knots, which will mean to the south, when their time of departure and arrival are one and five by the tidal clock; and 8 1/2 knots to the north, when their time of departure are seven and eleven by the tide. There is, therefore, in this four hours' run, which is made at a rate of 19 miles per hour, a possibility of the steamer finding herself, if she neglect the tidal stream, 140 miles to the north or to the south of Holyhead or Kingstown. In a fog, when the passage is delayed, it has sometimes happened that these steamers have found themselves off Bray or Duhury Sound, when they supposed they were close to the mouth of Kingstown Harbour. The tidal stream in the Irish Sea is greatly modified by the wind, which, if westerly, will cause the tide to carry out more water than its proper share past the Tuskar entrance, and vice versa, the wind, if southerly, will aid the ebb tide through the North Channel, and seriously embarrass vessels heading to the northward. —*Haughton, in Transactions of the Royal Irish Academy.*

Tide. s. [A.S. *tid, tyd*.—see under Time.]

1. Tide; season; while.

There they might in hope themselves to hide
From the fierce heat, and rest their weary limbs a tide. —*Spenser.*

Which at the appointed tide,
Each one did make his bride. —*Id.*

What hath this day observed,
That it in golden letter should be set
Among the high tides in the calendar? —*Shakespeare, King John*, iii. 1.

2. Alternate ebb and flow of the sea.

The motion of the water called *fluv* is a rising and falling of the sea; the cause of this is the attraction of the moon, whereby the part of the water in the great ocean which is nearest the moon, being most strongly attracted, is raised higher than the rest; and the part opposite to it being least attracted, is also higher than the rest; and these two opposite rises of the surface of the water in the great ocean following the motion of the moon from east to west.

and striking against the large coasts of the continents, from thence rebound back again, and so make floods and ebb in narrow seas and rivers.—*Locke*.

In the . . . hurricane of January 8, 1839, there was no tide at Calcuttaborough, which is twenty-five miles up the Trent—a circumstance unknown before. At Saltmarsh, only five miles up the Ouse, from the . . . Inumber, the tide went on ebbing, and never flowed till the river was dry in some places; while at Ouseford, towards which the wind was blowing, no extraordinary effects were observed. During strong north-westerly gales the tide marks high water earlier in the Thames than elsewhere, and does not give so much water, whilst the ebb tide runs out late, and marks lower; but upon the gales slanting, and the weather moderating, the tides put in and rise much higher; whilst they also run longer before high water is marked, and with more velocity of current; nor do they run out so long or so low.—*Sir J. Lubbock, in Philomusical Transactions*, 1841.

3. Commotion; violent confluence, as of a tide.

As in the tides of people once up there want not stirring winds to make them more rough, so this people did light upon two rime-waters.—*Illyon, History of the reign of Henry VII.*

That ever lived in the tide of times.

And pays the sea in tributary tides,
Be bribes sufficient to corrupt thy breast,
Or violate with dreams thy peaceful rest.
Dryden, Translation of Juvenal, iii. 97.
A continual tide
Flows from the exhilarating fount.

5. Turning point.

There is a tide in the affairs of men
Which taken at this flood leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries.
Shakespeare, Julius Caesar, iv. 3.

Now is the time for the men to come forward who have claims. . . . They once looked to the privy council, but would now be content with an hereditary honour; if they can have neither, they will take a citizenship in the treasury for a younger son. Perhaps they may get that in time; at present they go away growling with a gauger'ship; or having with desperate dexterity at length contrived to transform a tide-water into a land-water. But there is nothing like making—except refusing.—*B. Disraeli, Sybil*, b. i. ch. vi.

Tiding. part. adj. Flowing, or running in, agitated by, a tide.

When, from his dink, the for still backward shrunk,
Wading within the Ouse he bent his bows,

Tidology. s. Theory, doctrine, philosophy of the tides: (a hybrid word, i.e. English and Greek, and one recently coined).

It is thus, for example, with the theory of the tides. No one doubts that *tidology* (as Dr. Whewell proposes to call it) is really a science. As much of the phenomena as depends on the attraction of the sun and moon is completely understood, and may in any, even unknown, part of the earth's surface, be foretold with certainty; and the far greater part of the phenomena depends on those causes. But circumstances of a local or casual nature, such as the configuration of the bottom of the ocean, the degree of confinement from shores, the direction of the wind, &c., influence, in many or in all places, the height and time of the tide; and a portion of these circumstances being either not accurately knowable, nor precisely measurable, or at least not capable of being certainly foreseen, the tide in known places commonly varies from the calculated result of general principles by some difference that we cannot explain, and in unknown ones may vary from it by a difference that we are not able to foresee or conjecture. Nevertheless, not only is it certain that these variations depend on causes, and follow their causes by laws of inerring uniformity; not only, therefore, is *tidology* a science, like meteorology, but it is, what hitherto at least meteorology is not, a science largely available in practice. General laws may be laid down respecting the tides, predictions may be founded on these laws, and the result will in the main, though often not with complete accuracy, correspond to the predictions. . . . *Tidology*, therefore, is not yet an exact science; not from any inherent incapacity of being so, but from the difficulty of ascertaining with complete precision the real derivative uniformities.—*J. S. Mill, System of Logic*, pt. vi. ch. iii. § 1.

than emphatical, and which, when united
with this word, have at least consequen-
tially the same meaning.

Fleta remarks, in the reign of Edward I. or II.,
that unless an acre yielded more than six bushels of
corn, the farmer would be a loser, and the land yield
no rent. And Sir John Cullum, from very minute
accounts, has calculated that nine or ten bushels
were a full average crop on an acre of wheat. An
amazing excess of *tillage* accompanied, and partly,
I suppose, produced this imperfect cultivation. In

Of aged rocks, torn from the neighbouring lake,

4. Pitch, either endwise or sidewise.

Neither has the asserter of any new thing a right
to claim an answer in the form of Yes or No; or
think, because none is forthcoming, that he is to be
considered as having established his assertion. So
much is unknown to the wisest man, that he may
often be without an answer; as frequently he is so,
because the subject is in the region of hypothesis,
and not of facts. In either case he has the right to
refuse to speak. I cannot tell whether there are
two fluids of electricity or any fluid at all. I am
not bound to explain how a table *tilts* any more than
to indicate how, under the conjurer's hands, a pud-
ding appears in a hat.—*Faraday, Lectures on Mental*
Education.

Tilt. v. a. Point as in tilting.

he had entertained him with the slaughter of two
or three of his liege subjects, whom he very de-
terminedly put to death with the *tilt* of his lance.—

matter, to the amount of about a half per cent., oc-
casioning fissures and cavities in the substance of the
blistered bars, which render the steel unfit for any
useful purpose in tool-making, *tilt* it be condensed
and rendered uniform by the operation of *tilting*,
under a powerful hammer driven by machinery.
The heads of the *tilt-hammers* for steel weigh from
one and a half to two hundred pounds. At a small
distance from each *tilt* stands the forge-hearth for
heating the steel.—*Ure, Dictionary of Arts, Manu-*
factures, and Mines.

New reap'd. *Milton, Paradise Lost*, xl. 479.

Tilting. *part. adj.* Act of one who, that which, tilts.

In, or as in, a trial of arms.
His [Abelard's] education ripened with unex-
ampled rapidity his natural character; no man is so
overbearing or so stubborn as a successful disputant;
and very early in life Abelard became the most

powerful consistent in the intellectual tilling
mattices of the schools, which find now become one
of the great fashions of the day.—*Madman, History
of Latin Christianity*, ii. vii. ch. v.

and relaxation of special bands of parallel muscular
fibres.—*Marshall, Outline of Physiology, Human
and Comparative*, vol. i. p. 27: 1857.

Timber. *s.* [A.S. *timber*; *timbrian* = build.]

1. Wood fit for building.
The straw, as first I said, was laid below,
Of elms and screwwood was the second row;
The third of greens, and timber needed full.
Dryden, Palamon and Arcite, iii. 973.

Who set the twigs, shall he remember,
That is in haste to sell the timber?
And what shall of thy woods remain,
Except the box that threw the main?

Præp. Alma, iii. 558.

Timber also is part of the inheritance. Such as
oak, ash, and elm in all places; and in some parti-
cular countries, by local custom, where other trees
are generally used for building, they are for that
reason considered as *timber*; and to cut down such
trees, or to burn them, or to do any such other act whereby
the *timber* may decay, is waste. But understood
the tenant may cut down at any reasonable time
that he pleases; and may take sufficient stores of
common right for house-hold and cart-hold, unless
restrained (which is usual) by particular covenants
or exceptions.—*Sir W. Blackstone, Commentary on
the Laws of England*, b. ii. ch. xvi. § 4.

[The] tenure of the villenage bound them to what
were called villen services, hieholds in their nature,
and indeterminate in their degrees, the felling of
timber, the carrying of manure, the repairing of
roads for their lord, who seems to have possessed
an equally unbounded right over their labour and
its fruits.—*Hutton, View of the State of Europe
during the Middle Ages*, v. ii. ch. ii.

As the second element in a compound.

For the body of the ships no union doth equal
Eachend for the oaken timber wherewith to build
them; but there must be a great providence used,
that our ship-timber be not unnecessarily wasted.—
Bacon, Advice to Villiers.

2. Main trunk of a tree.

We take
From every tree, lop, bark, and part o' the timber,
And though we leave it with a root this hacket,
The air will drink the sap.
Shakespeare, Henry VIII. l. 2.

Such dispositions are the very errors of human
nature, and yet they are the fittest timber to make
politicks of, like to knots timber, that is good for
ships to be towed, but not for houses that shall
stand firm.—*Bacon.*

tract.

timbers, and, if necessary, the lengthening pieces.—
*Brande and Cox, Dictionary of Science, Literature,
and Art.*

Timbersaw. *s.* Worm in wood; perhaps
the woodlouse. So the explanation stands
in Johnson; the first part, zoologically,
being inaccurate; inasmuch as the wood-
louse is no worm but an isopod crusta-
cean of the genus Oniscus. The second
part in respect to its etymological correct-
ness is confirmed, first, by the word *saw*
being used as a name for certain members
of the genus, and, secondly, by the fact of
hoglouse being a synonym.

Divers creatures, though they be loathsome to
take, are of this kind; as earth-worms, *timbersaws*,
snails.—*Bacon.*

Timber-toe. *s.* [two words.] Term applied,
ludicrously, to a person with a wooden leg.

trees*, which thrive exceedingly.—*Mortimer, Hus-
bandry.*

Timbre. *s.* [Fr. = bell of a clock, gong.] See
extract.

Timbre [is] a word borrowed from the French,
and used in Acoustics to signify the quality of a
musical sound, termed by the Germans *Klangfarbe*,
'sound-tint.' When precisely the same note is
sounded on two different musical instruments, say
a pianoforte and an organ, although the 'pitch' of
the note, i.e. the number of vibrations per second,
is the same in both, yet the two sounds are quite
distinct. This distinction is due to a difference in
the *timbre* of the two notes. The Germans express
this by saying the sound has a different colour or
tint in the two cases. This peculiar quality in
musical sounds is caused by the mingling of a series
of secondary tones with the primary one. When,
for example, the string of a pianoforte is struck,
the string, whilst vibrating as a whole, is at the same
time divided, and again subdivided, into aliquot
vibrating segments, which, as it were, ride on the
back of the principal vibration. These vibrating
subdivisions give rise to a series of higher notes,
of gradually lessening intensity, called the 'harmonics'
of the primary note. The character and number
of these harmonics coexisting with the principal
note, is the cause of the *timbre* or quality of sound
peculiar to different musical instruments.—*Poir, in
Brande and Cox, Dictionary of Science, Literature,
and Art.*

Timbre, in Heraldry, [is] the crest which in any
achievement stands a-top of the helmet.—*Bailey's
Dictionary in voce.*

Timbre. *s.* [derived by Johnson from
timbre; Todd denouncing to the etymology,
and suggesting that it 'is perhaps a cor-
ruption of *tambour* or *tambourine*.'] The
two origins are not only capable of being
reconciled, but are essentially the same.]

Timocracy. s. [Gr. *timokratia*; *timos*, strength;
kratos, rule, prevail.] See extract.
Timocracy [is] a term made use of by some Greek
writers, especially Aristotle, to signify a peculiar
form of constitution; but there are two different
senses in which it is thus used, corresponding to the
differ of meanings of the word, *timos*, a price, or
honour, from which it is derived. According to the
first, it represents a state in which the qualification
for office is a certain amount of property; in the
latter it is a kind of mean between aristocracy and
oligarchy, when the ruling class, who are still the
best and noblest citizens, struggle for pre-eminence
amongst themselves.—*Brown and Cox, Dictionary
of Science, Literature, and Art.*

Timocratic. adj. Relating to, constituted

est in a common object, cannot be admitted with-
out large qualifications. All persons, whatever their
amount of property, have in fact an equal interest
in the well-being of the State, provided that interest
be well understood. Nevertheless, the establish-
ment of a property franchise, and the exclusion of
all who do not possess it, is a virtual adoption of
this principle. Suppose a body of a thousand per-
sons, of whom four hundred possess a certain amount
of property and six hundred do not. According
to the *timocratic* principle, each of the four hun-
dred would have plural votes, and each of the six
hundred would have one vote. But the same result
is even more effectually attained, if each of the four
hundred has one vote, and the others are not en-
franchised.—*Sir G. C. Lewis, On the Influence of
Authority in Matters of Opinion, ch. vii.*

Timorous. adj. [Lat. *timor*—fear.] Fear-
ful; full of fear and scruple.
Prepossessed heads will ever doubt it, and *timorous*
beliefs will never dare to try it.—*Sir T. Brown, Vulgar Errors.*

The infant flames, whilst yet they were conceal'd
In *timorous* doubts, with pity I behold;
With easy smiles dispell'd the silent fear,
That durst not tell I had I led to hear.
Prior, Celia to Damon, 5.

The pope, in his answer to the prelates and clergy,
did not maintain the same desecrated majesty. His
wrath was excited by what he deemed the *timorous*
apostacy of churchmen from the cause of the church.
—*Milman, History of Latin Christianity, b. xi.
ch. ix.*

Timorously. adv. In a timorous manner;
felly; with much fear.
We would have had you heard
The traitor speak, and *timorously* confess
The manner and the purpose of his treasons.
Shakespeare, Richard III. ii. 2.

Though they had ideas enough to distinguish gold
from a stone, and metal from wood, yet they but
timorously ventured on such terms which should
pretend to signify their real essence.—*Locke.*

Let dastard souls be *timorously* wise;
But tell them, Pyrrhus knows not how to form
Far-fancied ill, and dangers out of sight.
*A. Philips, Distressed Mother.
1:207*

Tin. *s.* [Fr. *étain*; German, *zinne*.]

1. Metal so called: (in Chemistry, *stannum*; in Alchemy, *Jupiter*; in the Arts, *cassius*. (Gr. *κασσίτην*), as in 'Purple of cassius').

Quicksilver, lead, iron, and tin, have opacity or blackness.—*Peacham, On Blazon*.

The uses of tin are very innumerable. Combined with copper, in different proportions, it forms bronze, and a series of other useful alloys. . . . With iron, it forms tinplate; with lead, it constitutes pewter, and solder of various kinds. Tin-foil coated with quicksilver makes the reflecting surface of glass mirrors. Nitrate of tin affords the basis of the scarlet dye on wool, and of many bright colours to the calico-printer and the cotton-dyer. A compound of tin with gold gives the fine crimson and purple colours to stained glass, and artificial gems. Rosin is made by fusing oxide of tin with the materials of flint glass. This oxide is also an ingredient in the white and yellow glazes of pottery wares.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Native peroxide of tin is generally grey, brown, or black, and sometimes transparent or translucent: its specific gravity is seven; its primitive crystal is an obtuse octahedron, of which there are very many modifications. In some of the valleys of Cornwall it is found in nodules mixed with pebbles, and is called stream tin. A modification of stream tin, in small banded fragments or globular masses, is called wood tin. Protochloride of tin (SnCl) is obtained by subjecting a mixture of one part of tin filings and two of corrosive sublimate to distillation. When tin is dissolved in hydrochloric acid, the solution evaporated, and the dry residue carefully heated incipient colours in a small tube retort, so as to exclude air, the protochloride of tin remains nearly pure. It is in the form of a grey solid, fusible and volatile at a high heat (but not of tin). When its solution in a small quantity of water is evaporated, it yields prismatic crystals, which include three atoms of water. The protochloride of tin, or salt of tin of commerce, is made by putting one part of granulated tin into a basin upon a sand-bath, and pouring upon it one part of hydrochloric acid; after some hours three parts more of the acid are added, and the mixture stirred and digested till a saturated solution is obtained.—*Frankland, in Braude and Cox, Dictionary of Science, Literature, and Art*.

As the first element in a compound.

We do not know, and there are no more means of ascertaining, when it was that the British islands were first inhabited by mankind. The name of the first civilised man, who is recorded to have had any dealings here, is Midas. He was, most probably, a Phœnician sea-captain or merchant, who came to the south-western end of Britain, to the part now called Cornwall, and took thence in his ship back to his home in Tyro or Sidon a cargo of the tin, with which the Cornish territory still abounds. His countrymen, the Phœnicians, and their kinsmen and colonists, the Carthaginians, continued for many centuries to carry on the British tin-trade which Midas had commenced.—*Sir E. Creasy, History of England*, ch. ii.

2. Money. Slang.

'Do you see Mother Carey's stall?' said Nick, pointing in that direction. 'When there's a tick at Madras Carey's there's no tin for Chaffing Jack. That's what I call watching events.'—'Oh! as for the tin,' said Caroline, 'in these half-tim days that's quite out of fashion. But they do say it's the last night at the Temple, for Chaffing Jack means to shut up, it does not pay any longer; and we want a lark. I'll stand treat; I'll put my ear-rings up the spout—they must go at last, and I would sooner at any time go to my uncle's for frolic than woe.'—*B. Darvill, Sibyl*.

Tin. *v. a.* Cover with tin.

To keep the earth from getting into the vessel, he employed a plate of iron tinned over and perforated.—*Boyle*.

The cover may be tinned over only by nailing of single tin plates over it.—*Mortimer, Husbandry*.
New tinning a saucepan is chargeable.—*Swift*.

Tineal. *s.* [Persian.] Native borax, more or less impure.

The *tineal* of the Persians seems to be the rhizocals of the ancients, and what our borax is made of.—*Woodward*.

Borax is a native saline compound of boracic acid and soda, found abundantly in Thibet and in South America. The crude product from the former locality was imported into Europe under the name of *tineal*, and was purified from some adhering fatty matter by a process kept a long time secret by the Venetians and the Dutch, and which consisted chiefly in boiling the substance in water with a little quicklime.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Tinehel. *s.* [A.S. *tynan* = enclose.] See extract.

An ancient hunting-match (the nature of the carriage excepted) was almost equal to a modern battle when the strife took place on the surface of a varied and unequal country. A whole district poured forth its inhabitants, who formed a ring of great extent, called technically a *tinehel*, and, advancing and narrowing their circle by degrees, drove before them the alarmed animals of every kind.—*Sir W. Scott, Castle Dangerous*.

Tinct. *v. a.* [Lat. *tinctus*, pass. part. of *tingo* = tinge, stain, die.] Rare.

1. Stain; colour; spot; die.

Some bodies have a more deperable nature than others in colouring; for a small quantity of saffron will tinct more than a very great quantity of wine.—*Bacon*.

Those who have preserved an innocence, would not suffer the whiter parts of their soul to be discoloured or tinct by the reflection of one sin.—*Dr. H. More, Deign of Christian Duty*.

Their small peculiar.

Milton, Paradise Lost, x. 1075.

'Tis the fate of princes, that no knowledge

Come, pure to them, but, passing through the eyes

And ears of other men, it takes a tincture

From every channel. *Sir J. Denham, The Sophy*.

Or come discolour'd through our passions shown.

over your mind, as to give a sovereign tincture to

all your other studies, and discolour all your ideas.

—*Watts*.

Scarcely one of the barbarians, so long as they

continued unconfused with the native inhabitants,

acquired the slightest tincture of letters; and the

prize of equal ignorance was soon aspired to and

attained by the entire mass of the Roman Italy.—

Hollan, View of the State of Europe during the

Middle Ages, pt. i. ch. ix.

The old inscriptions, even of the fourth and fifth

centuries, are full of solecisms and corrupt ortho-

graphy. In legal instruments under the Lombard

kings, the Latin inflections are indeed used, but

with so little regard to propriety that it is obvious

the writers had not the slightest tincture of gram-

matrical knowledge.—*Ibid*.

Nothing in the early existence of Britain indi-

cated the greatness which she was destined to attain.

Her inhabitants, when first they became known to

the Tyrian mariners, were little superior to the natives of the Sandwich Islands. She was subjugated by the Roman arms; but she received only a faint tincture of Roman arts and letters. Of the western provinces which obeyed the Romans she was the last that was conquered, and the first that was flung away.—*Macaulay, History of England*, ch. i.

2. In Pharmacy. Alcoholic solution of any medicinal principle.

In tinctures drawn from vegetables, the superfluous spirit of wine distilled off leaves the extract of the vegetable.—*Boyle*.

The term *tincture* is also applied to alcoholic solutions of resins, of which *tincture of myrrh* is an instance. *Tinctures*, from the quantity of alcohol which they contain, are usefully exhibited in small doses; the most important are those which contain highly active ingredients, such as opium, &c.—*Braude and Cox, Dictionary of Science, Literature, and Art*.

3. In Heraldry. See extract.

In Heraldry, *tinctures* are of three kinds: metals, colours, and furs. The former are or, argent, the second gules, azure, sable, vert, purpure, sanguine, and tenné. The chief furs are ermine and vair, but there are several varieties of both, distinguished by different names. Each metal and colour, in heraldry (except the two last and least honourable, sanguine and tenné), is represented by a distinct precious stone and heavenly body; and when the arms of sovereign princes or high dignities are described by old heralds, the *tinctures* are frequently denoted by the names of these jewels or celestial bodies.—*Braude and Cox, Dictionary of Science, Literature, and Art*.

A real powder mixed with a little blue, or a blue
with a little red, doth not presently lose its colour;

I. Newton, Opticks.

The first rectangle in the range is the tin-pot; the
second is the wash-pot, with a partition in it; the

But after all, sir, where is the injury? You assure
me, that my *logic* is purple and *luscious*, that it car-

such a writer to furnish your piece of mind, or to
figure a character so well established as yours.—

Where life wakes, and glows at every line;
Or blend in beauties that the colour'd umma,
And from the canvas call the mimic face.

Pope, *Epistle to Mr. Johnson*, 3.

Though it be allowed that elaborate harmony of
colouring, a brilliancy of *tints*, a soft and gradual
transition from one to another, present to the eye
what an harmonious concert of music does to the
ear, it must be remembered, that painting is not
merely a gratification of sight. —*Sir J. Reynolds*.

than others. It may be added that both
tinnabular and *tinnabular* are words
which Johnson has not entered in his
Dictionary.

Tinnabular. adj. Tinnabular.

Another Gargamish (a sort of foetus-major), who

objections were raised, such as the *tipset* and mir-
ricle, the sign of the cross in baptism, the ring in
testimony, the posture of kneeling at the com-
munion, might have been left to private discretion,
not possibly without some inconvenience, but with
less, as I conceive, than resulted from rendering
their observance indispensable.—*Hallam, Constitu-*
tional History of England, ch. iv.

Tyburn tipset. Hanger round the neck:
(an old term used in the following well
known passage from Bishop Latimer).

If a judge should ask me the way to hell, I would
show him this way. First, let him be a covetous
man; let his heart be poisoned with covetousness.
Then let him go a little further and take bribes;
and, lastly, pervert judgment. In, here is the mo-
ther, and the daughter, and the daughter's daughter.
Advise is the mother: she brings forth bribe-taking,
and bribe-taking perverting of judgment. There
lacks a fourth thing to make up the news, which, so
help me God, if I were judge, should be 'hangum
tum.' A Tyburn *tipset* to take with him; an it were
the judge of the King's Bench, my Lord Chief Judge
of England, yea, an it were my Lord Chancellor
himself, to Tyburn with him.—As quoted by *Mac-*
aulay, Critical and Historical Essays, Lord Bacon.

But those she called were not awake.

Scott, Castle Dangerous.*

Tirl. v. a. Drill.

Tirl. v. n. Drill; this is what it is word for word as well as in sense. It is also the *-tirl* in *nos-tirl*, the A.S. *pyrel*. If it were not for a peculiar combination (i.e. with *pin*) this would be about all that need be said concerning it. The aforesaid combination, however, has invested it with some importance. To 'tirl upon the pin' is an expression very common in our old ballad literature. To Sir G. C. Lewis it seemed to require a fuller explanation than it had; an elaborate paper upon it in the Classical Museum being the result. This suggested that, in a secondary sense, *tirl* meant *make a noise, din*; by rapping with a knocker, the pin being that upon which the knocker knocked. That this may have been meant by the phrase after the original import had become obscure is probable. It is submitted, however, that the original import was that of the words in the ordinary construction, and with their primary meanings. A door simply latched can be opened from the outside. By placing a peg, or pin, over the latch on the inside it can be locked; i.e. the latch can be no longer raised from the outside. Such a peg, or pin, however, if it passes through the whole breadth of the door, can be driven out by a blow or push on the outside end. Hence the pin, to be effective, must *not* go through the door. It is equally without effect to a person on the outside who, with a gimlet in hand, knows exactly where to find it; for he could simply bore,

TIT

drill, or tirl down upon it (the pin), drive it out inwards, and raise the latch in the ordinary way. This seems to be what is meant in the song quoted by Sir G. C. Lewis.

Soft-a, soft-a,
Of all your rhins,
We know the pins,
For we have tirl'd them oft-a.

For the effect of the pin, presumed in this explanation to be the important part of the fastening, a peg driven in sideways, immediately over the latch, so as to prevent its being lifted, is the expedient now in use.

Tis, contracted for it is.

'Tis destiny unshunnable. *Shakespeare, Othello, iii. 3.*

An upper vest, once Helen's rich attire.
Dryden, Translation of the Æneid, i. 815.

2. In *Anatomy*. See extracts.

Under whichever of these methods the formation of tissues may be performed, the same general conditions are required. In the first place it is requisite that a due supply of the materials be afforded, in a state in which it can be appropriated. . . . In the second place, the formative process is mainly dependent upon a due supply of heat.—*Dr. Carpenter, Principles of Comparative Physiology, § 315, 316.*
We shall now briefly indicate the elemental constitution of the various tissues. . . . The connective tissues, areolar, fibrous, tendinous, and osseous, including the basis of the skin, contain about two-thirds of water, and one-third of solid matter. . . . Permanent cartilage contains about three-fifths of water and two-fifths of solid matter, &c. . . . The yellow elastic tissue is said to contain less water than other soft tissues. . . . Recent bone contains nearly ten per cent. of water. . . . The purest form of the muscular tissue, the substance of the voluntary muscles, contains about 75 per cent. . . . of water. . . . The white and grey nervous substances resemble each other in containing, like the rest of the soft tissues, a very large percentage of water; the solid residue is composed of albuminoid matter, a large quantity of fatty matter, extractions, and salts.—*Marshall, Outline of Physiology, Human and Comparative, vol. i. p. 80; 1867.*

Tissues, properly so called, consist of collections of cells of uniform character permanently combined together by more or less complete union of their outer surfaces. The tissues are distinguished into kinds according to the form of the cells, the character of the cell-membrane, and the manner in which the cells are connected together. . . . Of tissues distinguished simply by the form of their constituent cells we have three kinds:—imperfect cellular tissues (Mucous tissues); perfect cellular tissues (Parenchyma); fibrous tissues (Fibrous tissues). Distinguished by the character of the cell-membrane—cartilaginous tissue (Cartilaginous). Two kinds are characterized by peculiar modes of combinations of the cells:—fatted tissues (Tela corticala), vascular tissues.—*Henfrey, Elementary Course of Botany, Structural, Physiological, and Systematic, §§ 700, 707.*

Mr. Avenel, in his genius for speculation and improvement, had established a factory at Screweston, the first which had ever eclipsed the church spire with its Titanic chimney.—*Lord Lytton, My Novel, b. x. ch. xx.*

Here, as one of the Titans was fabled to have been imprisoned in Mount Ætna, and by his motions to have caused volcanic eruptions, the term implies, over and above the size of the chimney, its smoke and fire.

Titanium. s. [the final *-um* belongs to the technical language of Chemistry, denoting a metal.] Metal so called. *Titanic*, as applied to the acid, and *titanate* to the salts, are its derivatives. See extracts.

Titanium is a rare metal, discovered by Klaproth, in menachinite, in 1794. It has been detected since in the form of small cubes of a copper-red colour, in some of the blast furnaces in Yorkshire. According to Hassenfratz its presence in small quantity does not impair the malleability of iron. It is very brittle, so hard as to scratch steel, and very light, having a specific gravity of only 5.3. It will not melt in the heat of any furnace, nor dissolve when crystallized, even into nitro-muriatic acid; but only when in fine powder. By calcination with nitre it becomes oxygenated, and forms *titanate of potassa*. Traces of this metal may be detected in many iron, both wrought and cast. The principle ores of *titanium* are sphene, anatase and rutile, leuconite, menachinite, and catenahedrite or pyrochloite *titanium* ore. None of them has been hitherto applied to any use.—*Cro., Dictionary of Arts, Manufactures, and Mines.*

Titanium was discovered by Gregory in a mineral from Cornwall called menachinite. Its characters were first ascertained by Klaproth, who gave it the above name. In the year 1825, Dr. Wollaston ascertained the presence of a large proportion of *titanium* in the minute copper-coloured crystals occasionally found in the slag of the iron melting furnaces at Merthyr and elsewhere. . . . It has since been ascertained that these crystals contain about 18 per cent. of nitrogen and 3 of carbon, and are probably a mixture of oxide with cyanide of *titanium*. The equivalent assumed in *titanium* is 21, and the peroxide, or titanic acid, is TiO₂. *Titanium* appears susceptible of two degrees of oxidation. The protoxide is blue or purple, and appears to constitute the mineral called 'Anatase'. The peroxide exists nearly pure in *titanite*, or rutile, and is combined with the oxides of iron and manganese in menachinite. The properties of pure *titanium* are but little known.—*Beaude and Cox, Dictionary of Science, Literature, and Art.*

Tithing is the number or company of ten men with their families knit together in a society, all of them being bound to the king for the peace and good behaviour of each of their society; of these companies there was one chief person, who, from his office, was called (bookishman) *tithingman*; but now he is nothing but a constable.—*Cocell*.

The *Coel* was a member of a *tithing*; that is to say, he and his neighbours of the same rank were enrolled in a little community (originally, but not always, consisting of the heads of ten families), each member of which was surety to the State for the good conduct of the rest. They chose among themselves their headman, their decurion, or *tithingman*, who was the peace-officer of the district. Also, under his presidency, they exercised a salutary jurisdiction over members of their own body, about local disputes of small value but frequent occurrence. A number of *tithings* grouped together made up the hundred, a combination for local self-government very general among all the Germanic and Scandinavian nations. The hundred had its court, presided over by its own officer, the hundred's carl, whose post has been taken by the high constable of after times. This court decided cases in which the inhabitants of more than one *tithing* were interested, unless the important nature of the case made it fit for the superior tribunal of the assembled thanes of the whole county; that is, of the shire moot or county court.—*Sir E. S. Creasy, History of England*, vol. i. ch. vi.

Come now, there's a dower—drink a little of this—it'll do you good—don't give way so, there's a love, &c. &c.; the humbly, assisted by a chamber-maid, proceeded to vinegar the forehead, beat the hands, *titillate* the nose, and unlace the stays of the apu-

ster aunt, and to administer such other restoratives as are usually applied by compassionate females to ladies who are endeavouring to ferment themselves into hysterics.—*Dickens, Pickwick Papers*, ch. x.

Titillating. part. adj. Ticking.

Titillation. s.

1. Act of tickling.

Tickling causeth laughter: the cause may be the emission of the spirits, and so of the breath, by a slight from *titillation*.—*Bacon*.

The concluding a literary undertaking, in whole or in part, is, to the inexperienced at least, attended with an irritating *titillation*, like that which attends on the healing of a wound—a prurient impatience, in short, to know what the world in general, and friends in particular, will say to our labours. Some authors, I am told, profess an oyster-like indifference upon this subject; for my own part, I hardly believe in their sincerity.—*Sir W. Scott, Chronicles of the Canongate*, preface.

Not touches of natural emotion, but the *titillation* of wit and fancy, not tones of natural music, but the tone of good society,—make up the charm of his [Pope's] poetry; the polish, juugency, and brilliancy of which, however, in its most happily executed passages, leave nothing in that style to be desired.—*Craik, History of English Literature*, vol. ii. p. 227.

2. State of being tickled.

In sweet, the acid particles seem so attenuated in the oil as only to produce a small and grateful *titillation*.—*Arbuthnot*.

Milton, Paradise Lost, xii. 60.

3. Name; appellation.

Shakespeare, Macbeth, v. 7.

Milton, Paradise Lost, xi. 163.

4. First page of a book, telling its name, and generally its subject; inscription.

Others with wishful eyes on glory look, When they have got their picture 'wards a book; Or pompous *titul*, like a gaudy sign, Meant to betray dull souls to wretched wine.

Young, Love of Fame, l. 77.

Among those who appear to have felt this irksome

situation, are most of our periodical writers. The 'Tatler,' and the 'Spectator,' enjoying priority of conception, have adopted *titles* with characteristic felicity; but perhaps the invention of the authors begins to fall in the 'Reader,' the 'Lover,' and the 'Theatre!' Succeeding writers were as unfortunate in their *titles*, as their works; such are the 'Universal Spectator,' and the 'Lay Monastery.' The copious mind of Johnson could not discover an appropriate *titul*, and indeed in the first 'Idler,' acknowledged his despair. The 'Rambler' was no little understood, at the time of its appearance, that a French journalist has translated it 'Le Chevalier Errant,' and when it was corrected to 'L'Errant,' a foreigner drank Johnson's health one day, by innocently addressing him by the appellation of Mr. 'Vagabond!' The 'Adventurer' cannot be considered as a fortunate *titul*; it is not appropriate to those pleasing miscellanies, for any writer is an adventurer. The 'Lounger,' the 'Mirror,' and even the 'Campanist,' if examined accurately, present nothing in the *titul* descriptive of the works. . . . When the celebrated father of all reviews, 'The Journal des Savans,' was first published, the very *titul* repulsed the public. . . . An English novel, published with the *titul* of 'The Champion of Virtue,' could find no readers; it was quaint, formal, and sounded like 'The Pilgrim's Progress.' It afterwards passed through several editions under the impious invitation of 'The Old English Baron.' 'The Conculine,' a poem by Mickle, could never find purchasers, till it assumed the more delicate *titul* of 'Sir Martyn.' . . . The Jewish and many oriental authors were fond of allegorical *titules*, which always indicate the most puerile age of taste. The *titules* were usually adapted to their obscure works. It might exercise an able critic to explain their allusions; for we must understand by 'The Heart of Aaron,' that it is a commentary on several of the prophets. 'The House of Joseph' is an introduction to the Talmud. 'The Garden of Nuts,' and 'The Golden Apples,' are theological questions, and 'The Pomarante with its Flower,' is a treatise of ceremonies, not any more practical. Justin gives a *titul*, which he says of all the fantastical *titules* he can recollect is one of the prettiest. A rabbin published a catalogue of rabbinical writers, and called it 'Lalala Ikonitium.'—*J. Disraeli, Curiosities of Literature, Titul's of Books*.

'Tis our duty, and our interest too, Such monuments, as we can build, to raise, Last all the world prevent what we should do, And claim a *titul* in him by their praise.

Byron, Beppo, lvi.

If it were inquired of an ingenious writer what page of his work had occasioned him most perplexity, he would often point to the *titulpage*. . . . Affected *titulpages* were not peculiar to the orientals; the Greeks and the Romans have shown a finer taste. They had their Cornucopias, or horns of

abundance—Timones or meadows—Pinakidions or taluks—Pancarpas or all sorts of fruits; titles not unhappily adapted for the miscellaneous. The nine books of Herodotus, and the nine epistles of Æschines, were respectively honoured by the name of a Muse; and three orations of the latter, by those of the Graces.—*J. Diarcti, Curiosities of Literature, Titles of Books.*

After a short consultation with Doolen and Podge, the learned sergeant again turned towards Sam, and said, with a painful effort to conceal his vexation, 'Now, Mr. Weller, I'll ask you a question on another point, if you please.' 'If you please, sir,' rejoined Sam, with the utmost good humour. 'Do you remember going up to Mrs. Bardeley's house, one night in November last? I thought we should get at something at last.' 'I rather thought that, too, sir,' replied Sam; and at this the spectators tittered again.—*Dickens, Pickwick Papers, ch. xxiv.*

In hollow caverns vermin unite above,
The hissing serpent, and the swelling toad.

Dryden, Translation of the Georgics, l. 268.

Few animals have ever suffered more undeserved persecution as the victims of an absurd and ignorant prejudice, than the toad. . . . The stories of toads having been found in the very substance of the wood of a tree, and in the midst of a solid and hard rock, are too numerous, and too generally asserted and believed, to be passed over here. . . . The truth probably is that a toad may have lain hid in the hollow of a tree perhaps during a whole autumn and winter, and found itself on the return of spring so far enclosed within its hiding-place as to be unable to escape. . . . That toads may be rendered very tame, and be made to distinguish those who are kind to them, there are abundant facts to testify.—*Bell, British Reptiles.*

The toads [are] tailless batrachians, common in Britain, . . . exemplifying the family Bufonia, having half-wheeled toes, the glandular swelling callosa parotoid between the eye and ear, and the nasal dimorphoses expanded. The genus Bufo has the femur rather short; no teeth; tongue elliptical, entire, with the free margin turned back; skin more or less warty. Toads exist in almost every part of the globe except Australia. The parotoids exude a foetid and rather acrid milky secretion, which is the sole foundation for the vulgar error of the poison of the toad. The animal is useful to man, and in no way noxious.—*Green, in Brande and Cox, Dictionary of Science, Literature, and Art.*

As the first element in a compound.

From th' extremest upward of thy head
To the descent and dust below thy foot,
A most toad-spotted traitor.

Shakespeare, King Lear, v. 3.

Toad-eater. s.

1. Mountebank's man, one of whose duties was to swallow, or pretend to swallow, any kind of garbage: (Tom Brown so calls Joseph Himes, who died A.D. 1701. See Wedgwood).

2. Contemptuous term of modern times for a fawning parasite; servile sycophant:

(added by Todd; Wedgwood connects this with the French *avaler des couleuvres* = swallow adders, rather than with the first sense. The two derivations, however, are compatible).

I was reduced to be as miserable a toad-eater as any in Great Britain, which in the strictest sense of a word is a servant, except that the toad-eater has the honour of dining with my lady, and the misfortune of receiving no wages.—*Sir C. Mansbury Williams.*

At five she had to attend her colleague, Madam Schwellenberg, a hateful old toad-eater, as illiterate as a chambermaid, as proud as a whole German

chapter, rude, peevish, unable to bear solitude, unable to conduct herself with common decency in society.—*Macaulay, Critical and Historical Essays, Madam D'Arbury.*

Lord Marry also really liked pomp, a curious table, and a luxurious life; but he liked them under any roof rather than his own. Not that he was what is commonly called a screw; that is to say, he was not a mere screw; but he was acute and malicious; saw everybody's worth and position at a glance; could not bear to expend his choice wines and costly viands on hangers-on and toad-eaters, though at the same time no man encouraged and required hangers-on and toad-eaters more.—*H. Disraeli, Sybil, b. ii. ch. ii.*

Toad-eating. s. Practice, or habit, of a toad-eater.

These men attained literary eminence in spite of their weaknesses. . . . Without . . . the officiousness, the inquisitiveness, the effrontery, the toad-eating, the insensibility to all reproach, he never could have produced an excellent book.—*Macaulay, Critical and Historical Essays, Roswell's Life of Johnson.*

Toadflax. s. [German, *toft = dead*.] Native

plant of genus *Linaria* (vulgaris); so called from its stem and leaves resembling those of flax, while for the purposes to which flax is applied it is useless; butter-and-eggs. The *Thesium linophyllum* is *bustard* toadflax.

One of the gayest of the autumn hedgerow plants is the butter-and-eggs of the country-folk—the yellow toadflax; its tall stem clothed with narrow slender leaves of a greyish-green hue, is surmounted by a loose terminal spike of handsome yellow flowers, each flower of which has a large orange spot. The juice of the toadflax is expressed, and, when mixed with milk, is sometimes used as a cosmetic, and at others to attract flies; it frequently occurs in the neighbourhood of old monasteries, and appears to have been cultivated by the old monks as a garden flower.—*J. T. Burgess, Old English Wild Flowers.*

Toadfish. adj. Venomous; like a toad.

Your toadish tongue would never have sought to have envenomed virtue.—*Stafford, Niobe, pt. ii. p. 76: 1611.*

A speckled toadfish, or poison-fish, as the women from experience named it.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia, p. 384.*

Toadsey. s. In Mineralogy. Variety of wood tin.

Toadstone. s. [from German *toft = dead*.]

In Geology. See extract.

Toadstone is the name given by miners to certain limestones, generally lamellar, which alternate with beds of limestone of the carboniferous series. It has been found by experience, that when metatelluric (lead-bearing) veins exist in these strata, the ore is rarely present where the vein traverses the lamella, and thus these rocks are said to be 'dead,' as not being productive. This name is applied chiefly in Derbyshire.—*Added, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Toadstone. s. [from English *toad*.] Concretion supposed to be found in the head of a toad.

The toadstone presumed to be found in the head of that animal is not a thing impossible.—*Sir T. Brown, Vulgar Errors.*

Toadstool. s. Poisonous mushroom.

The grisly toadstool grown there caught I see,
And lashed paddocks lording on the same.

Spenser.

Another imperfect plant like a mushroom, but sometimes as broad as a hat, called toadstool, is not esculent.—*Bacon.*

Toady. adj. Having the character of, resembling a toad.

View in of such a toady complexion, that she cannot choose but touch the nail to hate.—*Felltham, Resolves, cent. i. xiii. (Q.Ord M8.)*

Toady. s. Toadster.

A very feeble, but very flattering reflex of the parasite was the umbræ or shadow, who accompanied any invited guest, and who was sometimes a man of equal consequence, though usually a poor relative, or an humble friend—in modern cant, 'a toady.' Such is the umbræ of our friend Clodius.—*Lord Lytton, Last Days of Pompeii, note.*

Boys are not all toadies in the morning of life.—*Thackeray, Book of Snobs, ch. v. 6.*

He preferred toadies, generally speaking.—*Id., The Newcomes, vol. ii. p. 144.*

Toady. v. a. Fawn upon, flatter, display obsequiousness towards any one.

How these tabbies love to be toaded!—*G. Colman the younger, The Poor Gentleman, li. 2.*

He had no opinions himself, but toaded Clarion (who despised him) in the vague and dismal hope

that he would at some future day, be allowed to promenade his raw-boned figure in the saloons of Neville House.—*Hannay, Singleton Fontenay*, b. ii. ch. iii.

Toadyism. s. System, or practice, of toad-eating.

There are only a few bland and not-in-the-least-concited philosophers, who can behold the state of society, viz. *toadyism*, organized—base man-and-mannish worship, instituted by command of law;—snobishness, in a word, perpetuated, and mark the phenomenon calmly.—*Thackeray, Book of Snobs*, ch. iii.

Toast. v. a. Dry or heat at the fire.

The earth whereof the grass is soon parched with the sun and *toasted* is commonly forced earth.—*Bacon, Natural and Experimental History*.

Toast. s. [from Lat. *tosus*, pass. part. of *turro*=parch, roast.] Bread made dry and brown before the fire.

Every third day take a small *toast* of manchet, dipped in oil of sweet almonds new drawn, and sprinkled with loaf sugar.—*Bacon, Physical Remedia*.

Toast. s. Celebrated woman whose health is often drunk: (now applied to public characters, or private friends, whose healths we propose to drink). So the explanation stands in the previous editions, followed by the extract professing to give the origin of the word. Wedgwood's derivation is far preferable, viz. the German *stoss*, or *stoss an*=clink (glasses).

It happened that, on a public day, a celebrated beau, of those times [K. Charles II.] was in the Cross bath [at Bath], and one of the crowd of her admirers took a glass of the water, in which the fair one stood, and drank her health to the company. There was in the place a gay fellow half-fuddled, who offered to jump in, and swore though he liked not the liquor, he would have the *toast*. He was opposed in his resolution; yet this whim gave foundation to the present humour which is done to the lady we mention in our liquor, who has ever since been called a *toast*.—*Tadler*, no. 24.

Say, why are beauties praised and honour'd most; The wise man's passion, and the vain man's toast? Why deck'd with all that land and sea afford, Why angels call'd, and angel-like adored?
—*Pope, Rape of the Lock*, canto v.

Toast. v. a. [see under the substantive.] Name when a health is drunk.

We'll try the empire you so long have boasted; And if we are not praised, we'll not be *toasted*.

Prior, Epilogue to Lucina.
Several popish gentlemen *toasted* many loyal healths.—*Addison*.

Toast. v. n. Drink a toast.

Let not both houses of parliament have law dictated to them by the Constitutional, the Revolution, and the Unitarian societies. These insect reptiles, whilst they go on caballing and *toasting*, only fill us with disgust.—*Burke, Speech on the Petition of the Unitarians*.

Toaster. s. One who toasts.

We simple *toasters* take delight To see our women's lovely look white; And every saucy ill-bred fellow Serves at a mouth profoundly yellow.

Prior, Alma, li. 423.
The *toasters* and songsters may try all their art, But never shall enter the pass of my heart.

Lady M. W. Montague.

Toasting. s. System, practice, of drinking toasts.

I fell into the acquaintance of a set of jolly companions, who slept all day and drank all night: fellows who might rather be said to consume time than to live. Their best conversation was nothing but noise; singing, hallooing, wrangling, drinking, *toasting*, swearing, smoking, were the chief ingredients of our entertainment.—*Fiddling, Adventures of Joseph Andrews*.

Used adjectivally.

It does not appear that, after he [Montague] became a Lord of the Treasury, he ever wrote a complete, with the exception of a few neatly turned lines inscribed on a set of *toasting* glasses which were served to the most renowned Whig beauties of his time.—*Macaulay, History of England*, ch. xx.

Tobacco. s. Plant for smoking, of the genus *Nicotiana*. See extracts.

Whether it divine *tobacco* were, Or *panacea*.—*Spenser, Faerie Queen*, iii. 3. 2.
Bread or *tobacco* may be necktied; but remain at first recommends their trial and custom makes them pleasant.—*Locke*.

The flower of the *tobacco* consists of one leaf, in funnel-shaped, and divided at the top into five deep segments, which expand like a star; the ovary becomes an oblong roundish membranaceous fruit, which is divided into two cells by an intermediate partition, and is filled with small roundish seeds.—*Miller, Gardener's Dictionary*.

It is said that the name *tobacco* was given by the Spaniards to the plant, because it was first observed by them at Talameo, or Taluco, a province of Yucatan in Mexico. In 1560, Nicot, the French ambassador to Portugal, having received some *tobacco* from a Flemish merchant, showed it, on his arrival in Lisbon, to the grand prior, and, on his return into France, to Catherine of Medicis, whence it has been called *Nicotiana* by the botanists. Admiral Sir Francis Drake having, on his way home from the Spanish Main, in 1582, touched at Virginia, and brought away some forlorn colonists, is reported to have first imported *tobacco* into England. But, according to Lobel, this plant was cultivated in Britain before the year 1570; and was consumed by smoking in pipes, by Sir Walter Raleigh and his companions, as early as the year 1594.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Tobacco, the use of which has now become to the natives of the various species of *Nicotiana*; all the American *tobacco* is furnished by *N. tabacum* or its varieties, the Persian by *N. persica*, and the Syrian by *N. rustica*. It is a powerful stimulant narcotic, employed medicinally as a sedative, and in vapour to bring on nausea and fainting. When chewed it appears to impair the appetite and induce torpor of the gastric nerves. Although if smoked in moderate quantities it acts as a harmless excitant and sedative, yet it is a frequent cause of paralysis when the practice is indulged in to excess. Oil of *tobacco*, which is inhaled and swallowed in the process of smoking, is one of the most violent of known poisons. The Hottentots are said to kill snakes by putting a drop of it on their tongues, and the death of these reptiles is said to take place as instantaneously as if by an electric shock; dangerous symptoms are reported to have followed the application of the ointment to scald heads.—*Lindley, Vegetable Kingdom*.

As the first element in a compound.

It is a planet now I see;
And, if I err not, by his proper
Figure, that's like *tobacco-dipper*
It should be Saturn. —*Baile, Hudibras*, li. 3. 455.

Tobaccoer. s. Smoker of tobacco. *Rare*.

Sylvestre, Tobacco Battered, li. 578.

Tobaccoing. verbal abs. Smoking tobacco. *Rare*.

Neither was it any news on this guild-day to have the cathedral, now open on all sides, to be filled with smokers, waiting for the mayor's return, drinking and *tobaccoing* as freely as if it had been turned alehouse.—*Bishop Hall, Spectacles of his Life*.

And for the rest, it shall suffice to say,
Tobaccoing is but a smokeable play;
If then *tobaccoing* be good, how is 't,
That lowest, lowest, lowest, yollabes,
The most authority, most intertemperate,
Most virtuous, most delectable, most desperate,
Pursue it most? —*Sylvestre, Tobacco Battered*.

Toddy, and Toddy-tree. s.

1. Name applied to certain species of Palm, from the juice of which toddy is prepared; the liquor itself. See extracts.

The *toddy tree* is not unlike the date or palm.—*Sir T. Herbert, Relation of some Fear'd Travels into Africa and the Great Asia*, p. 29.

The wine or *toddy*, is got by piercing the tree, and putting a jar or pitcher under, so as the liquor may distil into it.—*Ibid.*, p. 29.

The proprietors of coco-nut plantations in the peninsula of India, and in the island of Ceylon, instead of collecting a crop of nuts, frequently reap the produce of the trees by extracting sweet juice from the flower-stalk. When the flowering branch is half shot, the *toddy* drawers bind the stock round with a young coco-nut leaf in several places, and beat the spawls with a short baton of ebony. This beating is repeated daily for ten or twelve days, and about the end of that period a portion of the flower-stalk is cut off. The stump then begins to bleed, and an earthen vessel (clay) or a calabash is suspended under it, to receive the juice, which is by the Europeans called *toddy*.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

The juice which flows from the wounded spawls of *Borassus flabelliformis*, *Rapanea vinifera*, *Mauritia vinifera*, the coco-nut, and other palms, is known in India by the name of *toddy*. Independently of the grateful qualities of this fluid as a beverage, it is found to be the simplest and easiest remedy that can be employed for removing constipation in persons of a delicate habit, especially European females.—*Lindley, Vegetable Kingdom*.

3. Less accurately, a kind of punch, or mixture of spirits and water.

and possibly to obtain some profit on the transac-
tion, private individuals issued, there being no law
to the contrary, copper pieces, called *tokens*, which
the person whose name they bore pledged himself
to redeem in silver on demand. There was scarcely
a village of any magnitude in which such a local
currency did not circulate, and a complete collec-
tion of such *tokens*, if indeed it could be made, would
contain many thousand specimens. The custom con-
tinued even up to the restoration of the currency in
1818, the Bank of England having for a short time
even issued a currency of silver *tokens*.—*Brande
and Cox, Dictionary of Science, Literature, and Art*.

It was condemned, when religion was turned into a political contest, under the assailing house of Austria—and in Spain—and in France. It required a long time before its nature was comprehended—and to this moment it is far from being clear, either to the tolerators, or the tolerated.—*J. There are two sorts of spasm, one of these is marked by a long-continued contraction of the affected muscle, not rapidly alternating with relaxation; the relaxation taking place slowly, after some time, and then perhaps the contraction after another interval coming on again. This is called *tonic* spasm; and by Galien spastic rigidity. A very familiar example of it is the common cramp of the leg. In the other form of spasm, the contractions of the affected muscles take place repeatedly, forcibly, and in quick succession; and the relaxation is, of course, as sudden and frequent. This has been named *tonic* spasm. ... I propose, first of all, to consider one of the most formidable and worst of these spasmodic diseases, viz., *tetanus*, of which *tonic* spasm is essentially characteristic. Its name is derived from *tonos*, to stretch. ... *Tetanus* then is characterised by an involuntary, long-continued, violent, and painful contraction; in one word, by cramp, of the voluntary muscles of various parts, or of nearly the whole body. ... In four cases, perhaps, out of five, the disease begins in this way with *trismus* or locked jaw, so that this last is the vulgar name for the complaint. ... *tetanic* symptoms occur at no fixed period after the reception of the injury.—*Sir T. Watson, Lectures on the Principles and Practice of Physic*, lecture xxii.

3. Relating to tones or sounds.

To the judicious performance upon this solemn instrument, [the organ,] my observations now naturally recur. In point of *tonic* power, I presume it will be allowed, preferable to all others.—*Mason, Three Kings on Church Music*, p. 42.

Tónical. adj. Tonic.

Station is no rest, but one kind of motion relating unto that which physicians, from Galien, call *tonus*, extensive or *tonical*.—*Sir T. Browne, Vulgar Errors*.

Tonicity. s. In Physiology. See extract.

There is a particular condition or state of slight tension of healthy muscles, which, beyond their mere elasticity, accounts for their retraction when they are cut across, and which is named their *tonicity* or *tonic* state. It is persistent only so long as they are healthy and remain in connection with the nerves and nervous centres; for, if the nerves are cut, or the nervous centres in connection with them are destroyed, the muscles lose their tone and become flaccid. It is this property continually in action which serves more than the elasticity ... to keep antagonistic muscles in a due state of equilibrium, in varying positions of the limbs; it seems also to be by a powerfully exercised *tonicity*, that sphincter muscles, like that placed round the outlet of the alimentary canal, are kept contracted.—*Marshall, Outlines of Physiology, Human and Comparative*, vol. ii. p. 102; 1867.

Tóning. verbal abs. Entoning.

Shutting the eyes, directing the face, and speaking through the nose, cannot so properly be called preaching, as *toning* of a sermon.—*South, Sermons*.

Tónica-bean. s. [Tonquin bean, from the country of its production.] Fruit of the *Dipteryx odorata*, used for scenting snuff.

The *Tónica-bean*, ... affords a concrete, crystalline, volatile oil, called *camphire* by the French.—*Cro, Dictionary of Arts, Manufactures, and Mines*.

Tónnage. s. Custom or impost due for merchandise brought or carried in tons from or to other nations, after a certain rate in every ton.

Tonnage and *portage* upon merchandises were collected, refused to be settled by act of parliament.—*Lord Clarendon, History of the Grand Rebellion*.

The 'droits du port' consist of anchorage, paid by all vessels in proportion to their *tonnage*, when they enter the harbours of Nice and Villá France.—*Smollett, Travels*, letter xxi. (Oct 188.)

At the upper end of the bay lies, sheltered by Berry Head, the stirring market town of Brixham, the wealthiest seat of our fishing trade. A pier and a haven were formed there at the beginning of the present century, but have been found insufficient for the increasing traffic. The population is about six thousand souls. The shipping amounts to more than two hundred sail. The *tonnage* exceeds many times the *tonnage* of the port of Liverpool under the kings of the House of Stuart.—*Murray, History of England*, ch. 12.

Tónsil. s. [Fr. tonsille; Lat. tonsilla.] In Anatomy. See extract.

Tonsils or *almonds* are two round glands placed on the sides of the base of the tongue, under the common membrane of the fauces, with which they are covered; each of them hath a large oval sinus, which opens into the fauces, and in it there are a great number of lesser ones, which discharge themselves, through the great sinus, of a mucous and slippery matter, into the fauces, larynx, and oesophagus, for the moistening and lubricating these parts.—*Quincy*.

Tónsile. adj. [Lat. tonsilia.] Capable of being, fit to be, clipped.

On the green,
Budder'd with crisped knots, the *tonsile* yew
Wither and fall.
Hence the sidelong walk
Of shaven yew; the holy's prickly arma
Trimmed into light arcsades; the *tonsile* box

Around the figured carpet of the lawn.
Ibid., b. i. p. 330.

Tónsure. s. [Fr.; Lat. tonsura.] Act of clipping the hair; state of being shorn: (especially as a member of the clerical order).

The vestals, after having received the *tonsure*, suffered their hair to come again, being here full grown, and gathered under the veil.—*Adrian*.
Few are born with more flattering hopes than was Scarron. His father, a counsellor with an income of 25,000 livres, married a second wife, and the lively Scarron soon became the object of her hatred. He studied, and travelled, and took the clerical *tonsure*; but discovered dispositions more suitable to the pleasures of his age than to the gravity of his profession.—*L. Disraeli, Curiosities of Literature*, Scarron.

This is not improbable, as in Rome he was very partial to the Egyptian superstitions, and he had adopted the *tonsure*, and had his head shaven like a priest of Isis, that he might more properly carry an Amulet-staff in the sacred processions.—*Sharpe, History of Egypt*, ch. xiv.

Tontine. s. Insurances, named after Tonti, an Italian, who first expounded and promulgated the principle whereby the premiums paid by a large body of life-assurers become the property of either the last survivor, or of a fixed number of the survivors.

'I am going out with a ... appetitment under government, if I can sweep the devil of fellows who are after me.' 'I hope it is a good office you have got,' said I. 'Tolerable,' said Daly, 'they have given me the deputy-secretaryship at Sierra Leone.' 'Oh!' said I. 'I know what you mean,' said Daly, 'but what could I do? it is a fine settlement for patronage; and if unsuccessful to death-vacancies, as they do in the army, I have a good chance. It is a sort of *Tontine* robbery—all for the benefit of survivors.' 'I am sure I sincerely wish you may lose your health.'—*Theodore Hook, Gilbert Gurney*, vol. iii. ch. v.

Tóny. s. [corruption of Antony.] Simpleton: (a ludicrous word).

A companion fit
For all the keeving *tonies* of the jöt.
When a man plays the fool or the extravagant,
presently he's a *tony*. Who drew this or that ridiculous piece? *tony*. Such or such a one was never well taught: No, he had a *tony* to his master.—*Sir B. L'Estrange, Translation of Querebo*.

enough to deny these facts, or shameless enough to

narrative, and the justice of my observations upon

it, at the hazard of my utmost credit with the

public.—*Letters of Junius*, letter xlv.

His sister has sought to know me: I will give her

the occasion. I have heard some things of her in

my last residence abroad, which make me believe

qualities in her than I once supposed; and that she

can be won from his influence.—*Lord Lytton, My Novel*, b. 2, ch. v.

A *toot* of the government, by giving a bribe to the

I cast to go a shooting.

Long wand'ring up and down the land,

With bow and bolts on either hand,

For birds in bushes *toot*ing.

Spenser, Shepherd's Calendar.

Of this word, in this sense, I know not the derivation: perhaps *toot*, Saxon, contracted from *tootian*, to know or examine. (Dr. Johnson.) Mr. Mason objects to this, and gives *to-lean*, to attract, as the origin; supporting it by a remark, that tradesmen at Tinsbridge Wells, meeting company on their way thither, to solicit their custom, were called *tooters*. Pegge has made a similar remark upon this mode of solicitation; to which he prefixes an observation, that some peas or beans, when they first appear above ground, are said, in Derbyshire, to *toot*; and to *toot*, in the canting dictionary, signifies to look up sharp. (Amoyquian, vi. 61.) Mr. Mason's *to-lean*, to attract, has however no connection with our old word *toot*; nor perhaps has Dr. Johnson's *tootian*. But it may surely be referred to the Saxon *tootian*, 'eminere tanquam cornu in frons,' as indeed Mr. Mason has referred it, forgetting what he had said of *toot*, under the verb *tole* in his Supplement, which is the very word before us in its ancient orthography.—*Todd*.

The teeth are the hardest and smoothest bones of
the body; about the seventh or eighth month they
begin to pierce the edge of the jaw: the 'dentures in-
closed,' or *incisors* of the upper jaw, appear first,
and then those of the lower jaw: after them come
out the 'canini' or *eye teeth*, and last of all the
'molars' or *grinders*: about the seventh year they
are thrust out by new teeth, and if these teeth be
lost they never grow again; but some have shed
their teeth twice: about the one-and-twentieth
year the two last of the 'molars' spring up, and
they are called 'dentures sapientie.'—*Quincy.*

"I think I see myself," bringing him to your house for a week! Thank 'ee all the same; but he's a little too near the top of the tree, for that, Pecksniff." The good man pricked up his ears; his interest was awakened. A position near the top of the tree was greatness, virtue, goodness, science, genius; or it should rather be said, a disengagement from all, and in itself something immeasurably better than all, with Mr. Pecksniff. A man who was able to look down upon Mr. Pecksniff could not be looked up at, by that gentleman, with too great an amount of deference, or from a position of too much humility.—*Dickens, Martin Chuzzlewit*, ch. xlv.

Not at all!" "You'll be shot, I see," observed Mercy. "Well!" cried Mr. Bailey, "Wot if I am? There's something gamy in it, young ladies, 'ut there? I'd sooner be hit with a cannon-ball than a rolling-pin."—*Dickens, Martin Chuzzlewit*, ch. xl.

- Top-dressing. s.** In Agriculture. See extract.
Top-dressing is a term applied to such manures as are laid upon land without being turned in; and also to the practice of drawing the surface of grass-land, or other crops, with some kinds of highly reduced manure, that can be evenly spread out or sown equally over them by the hand. A great variety of substances are in use for this purpose, such as soot, ashes, the dung of pigeons and other birds, rye dust, gypsum.—*C. W. Johnson, Farmer's Cyclopaedia*.
- Top-proud. adj.** [the p double in sound as well as in spelling.] Proud in the highest degree.

The golden stone is the yellow *topaz*.—*Bacon, Natural and Experimental History*.
Most perfect crystals of *topaz* have been found in Siberia, of green, blue, and white colours, along with beryl, in the Uralian and Altai mountains, as also in Kamchatka; in Brazil, where they generally occur in loose crystals, and pebble forms of bright yellow colour; and in Muela in Asia Minor, in pale straw-yellow regular crystals. They are also met with in the granitic detritus of Cairngorm in Aberdeenshire. The blue varieties are absurdly called Oriental Aquamarine by lapidaries. If exposed to heat, the Saxon *topaz* loses its colour and becomes white; the deep yellow Brazilian varieties assume a pale pink hue; and are then sometimes mistaken for spinelle, to which, however, they are somewhat inferior in hardness. *Topaz* is also distinguishable by its double refractive property. Tavernier mentions a *topaz*, in the possession of the Great Mowl, which weighed 157 carats, and cost 20,000 sterling. There is a specimen in the Museum of Natural History at Paris, which weighs 4 ounces 2 grains. *Topazes* are not scarce enough to be much valued by the lapidary. *Cree, Dictionary of Arts, Manufactures, and Mines*.

No *topiary* hedge of quickset
Was e'er so neatly cut or thickset. *Butler, Remains*.
Crescentus dilates upon horticulture, and gives a pretty long list of herbs both esculent and medicinal. His notions about the ornamental department are rather beyond what we should expect, and I do not know that his scheme of a flower-garden could be much amended. His general arrangements, which are minutely detailed with evide a fondness for the subject, would of course appear too formal at present, yet less so than those of subsequent times; and though acquainted with what is called the *topiary* art, that of training or cutting trees into regular figures, he does not seem to run into its extravagance.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. iv.

Torpido. *s.*

1. In *Ichthyology*. Fish, akin to the rays, from which it is separated by the circular form of the body, and, more especially, by being provided with electric organs.

The *torpido*, or cramp-fish, came to hand: a fish, if I may write truth, that by hiding itself with mud and dirt catches lesser fish very strangely: for, by his frigidity he benums such fish as swim over or lodge near him, and so preys upon them.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia, p. 384.*

When the Neapolitan fishermen pull their nets to shore, their first act usually is to wash the fishes by dashing over them bucketsful of sea-water; and if a *torpido* be amongst the captured shoal, it makes its presence instantly felt by the shock transmitted to the arm, which is in the act of discharging the bucket. If the fish be handled, the shock is too strong and painful to be willingly encountered a second time, and the arm remains benumbed for some time. Each repetition of the discharge, however, enfeebles its force, and the surface of the fish capable of communicating the shock progressively contracts, as life departs, to the region of the organs themselves. An animal must be in communication with the *torpido* by two distinct points, in order to receive the shock. If an insulated and prepared frog touches the *torpido* by the end of a nerve only, no muscular contractions ensue on the discharge of the battery; but a second contact by the end of another nerve, or by a portion of muscle, or any other part of the body, immediately produces them. . . . The dorsal surface of the electric organ is always positive, the ventral surface negative. The *torpido* has no power of otherwise directing the electric currents. . . . The discharge of strong currents is naturally accompanied by visible contraction of parts of the body, usually by a retraction of the eyes of the *torpido*, and one muscle is arranged so as to contract part of the circumference of each battery; but such concomitant muscular action, though it may add to the force of the discharge, is not essential to its production. The benumbing effect seems to be produced by the rapid accession of shocks delivered by the recent and vigorous fish. Mathematical ascertained that, during the discharge, the nerves of the organ were not traversed by any electric current.—*Owen, Lectures on Comparative Anatomy.*

2. In *Naval Warfare*. See extract.

Torpido, in nautical language, [is] the name applied to certain vessels constructed for navigating under water, the power of sustaining life and of moving the structure being derived from compressed air. Various designs of this class have at different times been brought to the test of experiments, but no practical results have hitherto followed. . . . The word has in recent years been also used to designate certain submerged bombshells, which are placed in the way of ships to be fired beneath them. They were used during both the Russian and American wars. The *tornadoes* are of two kinds, one self-acting, which is equally dangerous to friend and foe, and presents the special difficulty that it is too easy matter to fish up without an explosion; the other class are fired by electricity. . . . The electric *tornadoes* are of two sorts; one in which two observers, at separate points in the wire circuit connecting the *torpido* with the electric battery, look along lines intersecting at the machine. . . . The remaining sort of electric *torpido* is self-acting.—*Bruckebury, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Torrid. *adj.* [Fr. *torride*; Lat. *torridus*.]

1. Parched; dried with heat.

Galen's commentators mention a twofold dryness; the one concomitant with a heat which they call a *torrid* talent; the other with a coldness, when the parts are consumed through extinction of their native heat.—*Harvey, Discourse of Consumptions.*

2. Burning; violently hot.

As a comet, which with *torrid* heat,
And vapours as the Libyan air adust,
Began to parch that temperate clime.

Milton, Paradise Lost, xii. 634.

3. Particularly applied to the regions or zone between the tropics.

May they not gales unknown to us receive?
See daily showers rejoice the thirsty earth,
And bless the flowery buds succeeding birth?

Torsel. *s.* [Fr. *torse*.] Anything in a twisted form. *Rare.*

Torsion. *s.* [Lat. *torsio*, -*onis*; *torsus* and *tortus*; pass. part. of *torqueo* = I twist.] In *Mechanics*. See extract.

The laws of *torsion* have been experimentally investigated by Columbus in a variety of substances. The method which he employed consisted in attaching a body of given form and dimensions to the extremity of the wire, and, after twisting it through a certain angle, abandoning it to the action of the force evolved, and observing the time of the oscillations. The following general laws were found to hold good:—1. On loading a wire or thread with different weights, it will settle in different positions of stable equilibrium; i.e. an index attached to the weight will point in different directions if the weight be varied, and the angular deviation may amount even to a whole circumference. 2. The oscillations are isochronous. 3. The time of oscillation is proportional to the square root of the weight which stretches the wire. 4. The time of oscillation is as the square root of the length of the wire. 5. The time of oscillation is inversely as the square of the diameter of the wire.—*Brande and Cox, Dictionary of Science, Literature, and Art.*

Torso. *s.* [Italian.] In *Sculpture*. Statue of the human figure, in which nothing remains but the trunk: (applied more especially to the famous one of Apollonius, now in the Vatican; and, as such, a *proper*, rather than a *common*, name).

Why such an artist was selected to deface so fine a *Torso*, we cannot pretend to conjecture. We read that, when the Consul Minimus, after the taking of Corinth, was preparing to send to Rome some works of the greatest Grecian sculptors, he told the packers that if they broke his Venus or his Apollo, he would force them to restore the limbs which should be wanting. A head by a hewer of millions joined to a bosom by Praxiteles would not surprise or shock us more than this emplement.—*Macaulay, Critical and Historical Essays, Sir J. Mackintosh's History of the Revolution.*

Tort. *s.* [Fr.; L.Lat. *tortum*.] Mischief; injury; calamity. *Except as a law term, rhetorical or obsolete.*

And fast imprison'd in sleep'd fort.

For no wild beasts should do them any *tort*. *Id.*
Your disobedience and ill-managing
Of actions, lost for want of due support,
Woe I justly to a further spring,
Spring of sedition, strife, oppression, *tort*.

Pope.

How ran any of us see the body of our blessed Saviour broken, and his blood poured out, and withal think and know that his own sins are guilty

of this *tort* offered to the Son of God, the Lord of life, and not feel his heart touched with a sad and passionate apprehension of his own villainy?—*Bishop Hall, Remains*, p. 197.

Tortion. s. Torment; pain. *Rare.*

In his needy shop a *tortoise* haunts.

Shakespeare, Romeo and Juliet, v. 1.
A living *tortoise* being turned upon its back, not being able to unprop up its paws for the returning of itself, because they could only bend towards the belly, it could help itself only by its neck and head; sometimes one side, sometimes another, by pushing against the ground, to rock itself as in a cradle, to find where the inequality of the ground might permit it to roll its shell.—*Ray, On the Wisdom of God manifested in the Works of the Creation*.

2. Translation of the Latin *testudo*, into which the ancient soldiers used to throw their troops, by bending down and holding their bucklers above their heads so that no missiles could hurt them.

Their targets in a *tortoise* cast, the foe
Secure advancing, to the turret tower,
Dryden, Translation of the Æneid, ii. 601.

Tortoise-shell. s. Name given to the plates (which are horny rather than shelly) of the sea-turtle, particularly to those of the hawk's-bill turtle (*Chelone imbricata*).

Tortoise-shell, or rather scales, [is] a horny substance, that covers the hard strong covering of a heavy carapace, which encloses the *Testudo* imbricata. The lamellæ, or plates of this *tortoise*, are thirteen in number, and may readily be separated from the long part by placing fire beneath the shell, whereby they start asunder. They vary in thickness from one-eighth quarter of an inch, according to the age and size of the animal, and weigh from five to twenty-five pounds. The large animal, the better in the shell. This substance may be softened by the heat of boiling water; and if compressed in this state by screws in iron or brass moulds, it may be bent into any shape.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Tortuosity. s.

1. Wreath; flexure.

unto the body of the infant, from whence cometh

the *tortuosity* of wickedness.—*Grainger, Commentary on Ecclesiastes*, p. 65: 1621.

Rabel's... very mode of writing in complex, un-
careless, incoherent; with dashes and splashes;
with notes of admiration, of interrogation (say,
both together sometimes), with involutions, abrupt-
ness, which, and *tortuosities*; so that even the
grammatical meaning is sometimes burdensome to
write.—*Carlyle, Critical and Miscellaneous Essays, Varnhagen von Ense's Memoirs*.

Tortuous. adj. [*Fr. tortueux*; *Lat. tortuosus*.]

Twisted; wreathed; winding.

So varied he, and of his *tortuous* train
Curl'd many a wanton wreath.

rays of the sun, while it presented no obstacle to
wind or rain.—*Sir W. Scott, Castle Dangerous*,
ch. xiii.

The respiratory organs of the tubicular anellids
are in the form of long, flattened, and sometimes
tortuous, filaments.—*Owen, Lectures on Comparative Anatomy*.

2. Crooked; (as in 'crooked policy').

What *tortuous* planets, or malevolent
Conspiring power?
Lodge, Looking-Glasses

The appearance of the Remarks on Cato gave the
irritable poet an opportunity of venting his malice
under the show of friendship; and such an oppor-
tunity could not but be welcome to a nature which
was implacable in enmity, and which always pro-
1224

ferred the *tortuous* to the straight path. He pub-
lished, accordingly, the Narrative of the Frenzy of
John Dennis.—*Macaulay, Critical and Historical*
Essays, Life and Writings of Addison.

That course became somewhat less *tortuous* when
the battle of the Boyne had cowed the spirit of the
Jacobites.—*Id., History of England*, ch. xviii.

—*Bacon, Natural and Experimental History*.

Torturer. s. One who, that which, tortures;

To lengthen out the worst that must be spoken.
Shakespeare, Richard II. iii. 2.

When king Edward the Second was amongst his

torturous suspicion, and horrid fear, are washed up
by the mightiest watery desire.—*Dr. H. More, Con-*
jectures Conjectations, p. 100: 1653.

Therefore they make the admission *torturous*,
take time in the initiation, set a seal on the tongue,
and instruct the Episcopate for five years, to raise a
high opinion of them by delay and expectation.—

Papists compared, pt. iii. p. 330.

Tortuous. adj. [*Lat. torvus*.] Sour of as-
pect; stern; severe of countenance. *Rare.*

Tory. s. In *Politics*. See extracts from

Let such men quit all pretence to civility and

Auermaul.—*Glanville, Sermons*, p. 213.

The knight is more a *tory* in the country than
the town, because it more advances his interest.—
Addison, Spectator.

This protestant zealot, this English divine,
In church and in state was of principles sound;
Was truer than steel to the Hanover line,
And grieved that a *tory* should live above ground.
Steele.

To confound his hated coin,
All parties and religions join,
Whigs, *tories*.

Great heats and animosities were created by these
Petitioners and Abhorrents, and they occasioned
many frays and quarrels in private conversations;
and about the same time (1690), and from the same
cause, arose the pernicious *tories* and distinctions
of Whig and *Tory*, both exotic names, which the
parties involuntarily bestowed upon each other; all
that adhered to the interest of the crown and lineal
succession were by the contrary party branded with
the title given to the Irish robbers; and they, in re-

turn, gave the others the appellation of Whig, or
Sour Milk, formerly appropriated to the Scotch
Presbyterians and rigid Covenanters.—*Echard, His-*
tory of England, p. 388.

Tories, robbers, and rapparees, are always joined
together in the Irish acts of Parliament. *Tories*
were so called from the Irish word *toras*, give me
[your money]. The opponents of government in
1691 and 1692, &c. affected to think all who were
attached to the crown, papists; and therefore called
them *tories*, i.e. vile papists and robbers.—*Maloué*.

These appellations [Antidiluvians, Abhorrents,
Tantivies] soon become obsolete; but at this time
were first heard two nicknames which, though origi-
nally given in insult, were soon assumed with
pride, which are still in daily use, which have spread
as widely as the English race, and which will last
as long as the English literature. It is a curious
circumstance that one of these nicknames was of
Scottish, and the other of Irish, origin. Both in
Scotland and in Ireland, misgovernment had called
into existence bands of desperate men whose ferocity
was heightened by religious enthusiasm. In Scot-
land some of the persecuted Covenanters, driven
mad by oppression, had lately murdered the Prince,
had taken arms against the government, had ob-
tained some advantages against the King's forces,
and had not been put down till Monmouth, at the
head of some troops from England, had routed them
at Bothwell Bridge. These zealots were most nu-
merous among the rustics of the western lowlands,
who were vulgarly called Whigs. Thus the appella-
tion of Whig was fastened on the Presbyterian
zealots of Scotland, and was transferred to those
English politicians who showed a disposition to op-
pose the court, and to treat Protestant Noncon-
formists with indulgence. The box of Ireland, at
the same time, afforded a refuge to Polish out-
laws, much resembling those who were afterwards
known as Whiteboys. These men were then called
Tories. The name of *Tory* was therefore given to
Englishmen who refused to concur in extending a
Roman Catholic prince from the throne.—*Macaulay,*
History of England, ch. ii.

Toryism. s. System, or principles, of Tory
politics.

Nothing would illustrate the subject better than
an enquiry into the rise and progress of our late
parties; or a short history of *Toryism* and *Whig-*
ism from their cradle to their grave; the intro-
ductory account of their genealogy and descent.—
Bolingbroke, On Parties, letter ii.

Toss. v. a. [*Welsh, tosio*.]

2. Whole; not divided.

Myself the *total* crime; or to accuse
My other self, the partner of my life.
—*Milton, Paradise Lost, x. 120.*

Totality. s. [Fr. *totalité*.] Complete sum; whole quantity; wholeness.

Identity, diversity; possibility, act; *totality*,
parts, &c. are but wise cautions against ambiguity
of speech.—*Bacon, Advancement of Learning, li. ii.*
So much for *totality*, that common and essential
element to every legitimate composition.—*Harris,
Philological Inquiry.*

Shakespeare's intellectual action is wholly unlike
that of Ben Jonson or Beaumont and Fletcher.
The latter see the *totality* of a sentence or passage,
and then project it entire. Shakespeare goes on
creating, and evolving B. out of A., and C. out of B.,

and so on, just as a serpent moves, which makes a
filicium of its own body, and seems for ever twist-
ing and untwisting its own strength.—*Coleridge,
Table-Talk.*

The *totality* of human actions being thus, from
the highest point of view, governed by the *totality*
of human knowledge, it might seem a simple matter
to collect the evidence of the knowledge, and, by
subjecting it to successive generalizations, ascertain
the whole of the laws which regulate the progress
of civilization. And that this will be eventually
done, I do not entertain the slightest doubt.—*Buckle, History of Civilization in England, vol. i.
ch. v.*

Now here quality does not appear, the reason
being that it comprises both quantity and modality,
and it is thus the antipode of relation. I remark,
"obiter," that *totality* is plurality in unity; that con-
servation is the interdependence of existence; and
that reciprocity is the causality of states in a sub-
stance.—*Engelsh, An Introduction to Metaphy.*

Totally. adv. In a total manner; wholly; fully; completely.

The sound interpreters expound this image of
God, of natural reason; which, if it be *totally* or
mostly defaced, the right of government doth cease.
—*Bacon, Holy War.*

The elaborate sinner, that hath long hardened his
own heart against God, thereby provokes him *totally*
to withdraw all inward grace from him.—*Hut-
chinson*.

Charity doth not end with this world, but goes
along with us into the next, where it will be per-
fected; but faith and hope shall then *totally* fail;
the one being changed into sight, the other into
enjoyment.—*Bishop Atterbury, Sermons.*

Tóther, contracted for the other.

For example, see extract under Toss.

Tóter. v. n. Shake so as to threaten a fa-
staggerer.

The *tees* already have possess'd the wall,

acter, which led the way to them, shall bleed on
every side of it.—thy faith questioned, thy works
belied, thy wit forgotten.—thy learning trampled
on.—*Sterne, Tristram Shandy, vol. i. ch. ix.*

Numbers of no more seeming consequence in them-
selves than, "Whether my father should have taken
off his wife with his right hand or with his left,"—
have divided the greatest kingdoms, and made the
crowns of the monarchs who governed them, to
tóter upon their heads.—*Ibid., vol. iii. ch. ii.*

Tótering. part. adj. Shaking so as to
threaten a fall.

As a howling wall shall ye be, as yea as a *tótering*
fence. —*Psalms, liii. 3.*

And I believe will never stand upright.
—*Shakespeare, Richard III. iii. 2.*

Tótty. adj. Shaking; unsteady; dizzy.

Siker thy head very *tótty*,
So on thy collar shoulder it keeps amiss.
—*Spenser, Shepherd's Calendar.*

fident of the Jew's conversion, since he received that
bullet on the ear."—"Go to, know, what I protest thou
of conversions?—what, is there no respect?—all
masters and no men?—I tell thee, fellow, I was
somewhat *tótty* when I received the good knight's
blow, or I had kept my ground under it."—*Sir W.
Scott, Ivanhoe, ch. xxxiii.*

Was hard enough to *touch* them on.

—*Baile, Hudibras, l. 1, 111.*

scripture, as, namely, something out of the books of
the prophets of God; some things out of the apoc-
ryphal writings; and, lastly, out of the holy evangeli-
sts some things which *touch'd* the person of our
Lord Jesus Christ.—*Hooker, Ecclesiastical Polity.*

the touchstone faculty, and the standard uncertain?—*Collier.*

Puchstone [is] a name sometimes applied to coarse, dark-coloured stones, such as Purbeck and Tisbury marble and others of similar kind which

are frequently used for this work in Gothic architecture; some of these are capable of receiving a

high pollen; the term does not appear to have been in common use for any very long period. It is so called from its supposed identity with, or resun-

known to the lapidary, and is usually called by the name of the stone to which it is applied, as the lapis lazuli, or touchstone, used by goldsmiths in assaying the quality of gold by the

test of aquafortis. There is a fine effigy in the church at St. Denis, near Paris, of Catherine de Courtenai, who died in 1307, sculptured in lime-

Tourist. *s.* One who makes a *tour*: (a hybrid and recent word).

The near relationship between our notion of Time and our notion of Space is implied in various current forms of speech. In the phrase—'a space of time,' a magnitude of one is expressly used to signify a magnitude of the other. Conversely, the Swiss *tourist* whose inquiries respecting distances are answered in 'stunden,' or hours, and the savant who, in common with the ancient Hebrew, has a place described to him as so many days' journey off, find times used to express spaces.—*Hecht of Spencer, Principles of Psychology*, § 50.

In the place of these, of whom, however, many remain, there is a rapid increase in the number of *tourists*, who flock over by hundreds in search of health, amusement, and relaxation.—*Asiatic, The Channel Islands*, pt. i. ch. i. p. 15.

Tournament. *s.* [*N.Fr.*; *Lat. tournamentum, torneamentum*; *Romance, torneamentum*. (Cantabrigia, i. 42.)]

1. Tilt; joust; military sport; mock encounter.

They wield, under the pretence
Of tilts and *tourneaments*,
Provide them horse and armour for defence.—*Daniel.*

Whence came all those jousts, tiltings, and *tourneaments*, so much in use in these parts?—*Sir W. Temple, Miscellanies.*

He lived with all the pomp he could devise,
At tilts and *tourneaments* claim'd the prize,
But found no favour in his lady's eyes.—*Deighton, The Duke and Honoria*, 17.

Panting for the glory which neither their strength nor the established rules permitted them to anticipate, the young scions of chivalry attended their masters to the *tourneament*, and even to the battle, and riveted with a sick the armour they were forbidden to wear. It was the constant policy of sovereigns to encourage this institution, which furnished them with faithful supporters, and counteracted the independent spirit of feudal tenure. Hence they displayed a lavish magnificence in festivals and *tourneaments*, which may be reckoned a second means of keeping up the tone of chivalrous feeling. . . . *Tourneaments* were a still more powerful incentive to emulation. These may be considered to have arisen about the middle of the eleventh century; for though every martial people have found diversion in representing the image of war, yet the name of *tourneaments*, and the laws that regulated them, cannot be traced any higher. Every secular perform-

ance of modern times must be tame in comparison of these animating combats. At a *tourneament*, the space enclosed within the lists was surrounded by sovereign princes and their noblest barons, by knights of established renown, and all that rank and beauty had most distinguished among the fair. Covered with steel, and known only by their emblazoned shield, or by the favours of their mistresses, a still prouder bearing, the combatants rushed forward to a strife without enmity, but not without danger. Though their weapons were pointless, and sometimes only of wood though they were bound by the laws of *tourneaments* to strike only upon the strong armour of the trunk, or, as it was called, between the four limbs, those impetuous conflicts often terminated in wounds and death. The church uttered her excommunications in vain against so wanton an exposure to peril; but it was once again for her to exhort them to restrain that martial enthusiasm. Victory in a *tourneament* was little less glorious, and perhaps at the moment more exquisitely felt, than in the field; since no battle could assemble such witnesses of valor. . . . Honour to the sons of the brave,' resounded amidst the din of martial music from the lips of the minstrels, as the conqueror advanced to receive the prize from his queen or his mistress; while the surrounding multitude acknowledged in his prowess of that day an ancestry of triumphs that might in more serious combats be blended with those of his country.—*Hallam, View of the State of Europe during the Middle Ages*, pt. ii. ch. ix.

(For example see under *Toxicologist*.)

Toxicologist. *s.* One conversant with toxicology.

Poisons have been divided into irritants, narcotics, and narcotico-irritants: the first class including those whose sole or predominate symptoms are those of irritation or inflammation; the second, those which produce stupor, delirium, and other affections of the brain and nervous system; and the third, those which are of a mixed character. Many irritants possess corrosive properties, and *toxicologists* have drawn a distinction between corrosives and purely irritant poisons. . . . We have elsewhere given particulars respecting their composition and properties and sometimes referred to their toxicological history. —*Brande and Cox, Dictionary of Science, Literature, and Art*.

drews*.

'Yes,' replied the Athenian, carelessly *toying* with

days of Pompeii*, li. iii. ch. iv.

marks.

I feel thy power
Within me clear, not only to discern
Things in their causes, but to *trace* the ways
Of highest secrets. *Milton, Paradise Lost*, ix. 680.

in profane history; and every one of these people

The boundaries of the ancient Cilium are not
traceable.—*Drummond, Travels (Letter, 1740)*,
p. 284.

Thus striking is the contrast between the military
genius of ancient times, and the military genius of
modern Europe. The causes of this decay are
clearly *traceable* to the circumstances that, owing
to the immense increase of intellectual employ-
ments, few men of ability will now enter a pro-
fession into which, in antiquity, men of ability
eagerly or added, as supplying the best means of ex-
ercising those faculties which, in more civilized
countries, are turned to a better account.—*Locke,
History of Civilization in Europe*, vol. i. ch. iv.

Among animals as among plants, the laws of mor-
phological differentiation must be conformable to the
the morphological units, as well as by the larger
parts and the whole formed of them. It remains
here to point out that the entire city is *traceable*
where the conditions are simple.—*Herbert Spencer,
Inductions of Biology*, ch. xv. § 250.

Tracer. *s.* One who, that which, traces.

Many, the only man among the Latins who is a

plot of such nature. *Howell*.

Tracery. *s.* Ornamental stonework.
Tracery and construction do not agree with
the rules of such a lacertian and early period.
T. Norton, History of the Parish of Kington,
p. 15.

Some modern moulding or ornament will here
and there unfortunately be detected in the mould-
ing of an arch, the *tracery* of a niche, or the ramifi-
cations of a window.—*Id., An Enquiry into the
Authenticity of the Poems attributed to Thomas
Rowley*, p. 11.

This is the first form in which *tracery* appears,
and the tympanum in this form always retains the
character of a flat surface or plate of stone pierced
with openings. Hence this kind of *tracery* has
been termed plate *tracery* by Professor Willis. It
is more commonly to be seen on the continent than
in England, either because, having been undoubt-
edly first invented and developed there, it was
earlier and more largely employed, or because in
our case, windows of that character have been
taken out and replaced by later *tracery*. The tri-
bunes of Salisbury and Ely, and the screen in the
north transept of Gloucester, may be cited as fine
examples. *Geometrical Architecture*.

Geometrical *tracery* was never intended to do
more than support itself; and the proof of this as-
sertion is furnished by the fact that the *tracery* and
mouldings were almost invariably set after the win-
dow work was completed, being designed only to fill
the vacant space and carry simply their own weight;
whereas, in modern work of the same style, it is in-
cessantly to be seen, considerably portions of the
mouldings of the window arch worked together
with those of the *tracery* on the same plane—
Cf. in *Brank and Cox, Dictionary of Science, Li-
censure, and Art*.

Trachea. *s.* [Gr. *τραχέα*, feminine of *τραχός*
= rough; the word *αρτηρία* = artery, being
understood; and the windpipe being, by the
earliest anatomists, looked upon as an
artery, or else, the word *artery* being in-
vested with a more general signification.]
In *Anatomy*.

a. Of the animals with lungs. Windpipe, or
passage through which the air is drawn
into the lungs.

... cartilaginous rings of the *trachea* [of the
Cracea], at least near the termination of the tube,
are entire; where not so the deficiency is at their
fore part, and this is considerable in the upper
tracheal rings, in Balaenidae: the windpipe is very
short in all Cetacea; its width is great in propor-
tion to its length, but not to the bulk of the lungs
or of the body.—*Owen, Anatomy of Vertebrata*.

The *trachea* presents various modifications in
different birds. In some it is much longer than the
neck, forming a folded tube, which consists of a vast
number of rings, as in the caprimulgus, stork, crane,
and wild swan: in the flamingo, the rings are said
to be about three-hundred-and-fifty in number. In
some birds the *trachea* is wider above than below,
and in others it is dilated at various parts.—
*Marshall, Outlines of Physiology, Human and
Comparative*, vol. i. p. 271: 1867.

b. In insects. Lateral spiracles subservient
to respiration.

c. In plants, i.e. in *Vegetable anatomy*. Cer-
tain spiral vessels suggesting a comparison
with the windpipe.

Spiral vessels [are] generally termed *tracheae*,
from the resemblance which they bear to the wind-
pipe, and more especially to the air-cells of insects,
which are called by the same name. They consist
of a membranous tube, on whose inner surface a
cylindrical fibre is spirally coiled; and the whole so
completely united, that if the vessel be ruptured,
and the thread uncoiled, no trace of the membrane
is to be seen, excepting towards the conical exten-
sion of the vessel, where the coils of the fibre are
1229

wider apart. In some *trachee*, indeed, the successive cells are not in contact with each other, and then the investing membrane is sufficiently apparent. . . . When the stems of the plantain and banana are cut into slices, the *trachee* in which they abound unravel before the edge of the knife, and form fibrous masses, which may be collected, and wrought into a material possessing certain advantages superior to those of cotton, for the manufacture. The expense, however, of collecting this delicate substance has been found too great to admit of its being applied to any really useful purpose; as an entire plantain does not yield above a drachm and a half of *trachee*. *Trachee* have been detected in a very few of the flowerless plants, and only among the higher tribes of them, such as ferns and club-mosses. . . . The name of ducts is generally given to all varieties of tubes composing the vascular tissue, which are not, strictly speaking, true *trachee*; and they are separately named according to the appearances which the markings on their surface assume, such as dotted, striped, and reticulated ducts. *Henderson, Principles of Descriptive and Vegetable Anatomy*, pt. I, sect. I, §§ 24, 25.

Tracheal. *adj.* Connected with, relating to, constituted by, the trachea, or tracheae. (For example, see under *Trachea*.)

Tracheary. *adj.* Breathing by means of tracheae, rather than lungs; especially applied to an order of the class Arachnidae (spiders).

See extract. *Trachyte* is a variety of lava which is often porphyritic, and when containing hornblende and aëolite passes into the varieties of trap called basalt, gneiss, diabase, &c. — *Brande and Cox, Dictionary of Science, Literature, and Art*.

Tracing. *s.* Course; path; regular track. Not all those previous signs in heaven above Shall yield a sight more pleasing to behold, With all their turns and *tracings* manifold. *Sir J. Denon, Orchestra*, xiii.

3. Continuity; anything protracted, or drawn out to length. The myrtle flourisheth still; and wonderful it is that for so long a *tract* of time she should still continue fresh. — *Marcell*.

Your bodies may at last turn all to spirit, Improved by *tract* of time, and wind's second Ethereal as we. *Milton, Paradise Lost*, v. 497. As in *tract* of speech a dubious word is easily known by the coherence with the rest, and a dubious letter by the whole word; so may a deaf person, having competent knowledge of language, by an acute sensibility by some more evident word discerned by his eye, know the sense. — *Hobbes*.

4. Course; manner of process; unless it means, in this place, rather, discourse; explanation. The *tract* of every thing Would, by a good discourse, lose some life Which action's self was tongue to. *Shakespeare, Henry VIII.* l. 1.

As those who are bent to do wickedly will never wait tempters to turn them on in an evil course; so those who yield themselves *tractable* to good motions, will feel the spirit of God more ready to encourage them. — *Archbishop Tillotson*.

If strict hand be kept over children from the beginning, they will in that age be *tractable*, and quietly submit. — *Locke*. I did not then know what I afterwards learned, that longer will tame a lion. If I had let him stay there three or four days without food, and then have carried him some water to drink, and then a little corn, he would have been as tame as one of the kids; for they are mighty *tractable* creatures, where they are well used. — *DeFoe, Robinson Crusoe*.

2. Palpable; that may be handled. The other measures are of continued quantity visible, and for the most part *tractable*; whereas time is always transient, neither to be seen nor felt. — *Hobbes, Discourse concerning Time*.

Tractableness. *s.* Attribute suggested by *Tractable*; state of being tractable; compliance; obsequiousness.

It will be objected, that whatever I fancy of children's *tractableness*, yet many will never apply. — *Locke, Thoughts on Education*.

Tractarian. *s.* See extract. *Tractarians*, in modern church history, [is] a party name given to those members of the church of England, chiefly from the university of Oxford, who headed the theological movement which definitely took shape in 1833. Warton, Ode to Solitude.

Traded. s. See extract.

One of the greatest risks which the trade of any
country can run, is that of dishonesty or fraud on
the part of producers or dealers. . . . Once and over
again, it has been found impossible to establish
trade, because no valid security can be given that
agents and intermediate dealers will be honest.
The correction to these views, which always rest on those
who practise them, may be hoped for partly in the
spread of moral principle and an enlightened inter-
pretation of what constitutes real self-interest,
partly in the effectiveness of private and public
police. The latter of these methods of repression is
not necessarily operative, for it is not always easy
to be sure of the integrity and activity of those who
are appointed to watch over the administration of
law; the former is to some extent satisfied by the
use of trade marks, and the interest which honest
producers have in securing themselves against
fraud of the symbols adopted by them in order to
distinguish their wares from those manufactured by
rival houses. These symbols are known as trade
marks, and the custom of using some such marks
has become almost universal among those traders
who believe that such an advertisement is at once a
means for diffusing the knowledge of their goods,
and of protecting themselves from fraudulent imi-
tations. The earliest of these marks appear to have
been those who were used in the manufacture of
paper; and of paper water-marks, the earliest ap-
pears to be on a document bearing the date 1351,
i.e. shortly after the invention of paper from linen
rags. Trade-marks have also been used for a long
time on cutlery; and in some cases, as in the ancient
statutes relating to wool, the use of a trade mark
has been recognised by Act of Parliament. Trade
marks have, however, been very commonly forged
or counterfeited, and the Court of Chancery has in
numerous cases been called on to interfere by in-
junction for the purpose of restraining this practice.
By a recent statute (25 & 26 Vict. c. 84), frauds of
this nature have been made punishable by fine and
imprisonment.—*Rogers, in Brande and Cox, Dic-
tionary of Science, Literature, and Art.*

Trader. s. One who, that which, trades; one engaged in merchandise or com- merce.

Pilgrims are going to Canterbury with rich offer-
ings, and traders riding to London with fat purses.
—*Shakespeare, Henry IV. Part I. I. 2.*

Now the victor's won.
We return to our losses like fortunate traders.
Triumphant with spoils of the vanquish'd invaders.
Byron, King Arthur, I. 2.
Many traders will necessarily be more frugal.—
Sir J. Child, Discourse on Trade.
That day traders run up the accounts of the week.
—*Swift.*

Trades-union. s. [two words.] See extract.

The purpose of a trade's union is . . . the settle-
ment of the proportion which wages should bear to
profits. The effectiveness of a trade's union depends
on: (1) the esprit de corps of the workmen them-
selves; (2) moral restraint; and (3) unfortunately,
when men's passions are heated, coercion exercised
on those who are unwilling to join the trade's union
or are indifferent to its real or supposed advantages;
and (4) failing the consent of the employer or gen-
eral body of employers to the demands made by
workmen, the last remedy of a strike. Of late years,
the association of workmen for these purposes has
occupied a considerable amount of public attention,
and even alarm, although no one has ventured to
suggest that such combinations ought to be re-
pressed by authority, while many have asserted and
argued that a trade's union, with all its machinery
(short, of course, of coercion), is a natural expedient,
and a legitimate defence against wrongs which it is
presumed may be inflicted on labour by the power
of capital.—*Rogers, in Brande and Cox, Dictionary
of Science, Literature, and Art.*

Tradesfolk. s. People employed in trades.

By his advice victualers and tradesfolk would
soon get all the money of the kingdom into their
hands.—*Swift.*

Tradesman. s. Shopkeeper: (a merchant is called a trader, but not a tradesman; and it seems distinguished in Shakespeare from a man that labours with his hands).

I live by theawl, I meddle with no tradesman's
matters.—*Shakespeare, Julius Cesar, I. 1.*
They rather had beheld
Discontented numbers peep'ring streets, than see
Our tradesmen singing in their shops, and going
about their functions.

Id., Coriolanus, IV. 6.
Order a trade thither and thence so some few
merchants and tradesmen, under colour of furnish-
ing the colony with necessaries, may not grind them.
—*Idem.*
St. Jourdain would not be thought a tradesman,
but ordered some silk to be measured out to his
partner's friends: now I give up my shop.—*Prior.*
From a plain tradesman with a shop, he is now
grown a very rich country gentleman.—*Archibald,
History of John Bull.*

Households in a gentleman's family have more
opportunities of improving their minds, than the
ordinary tradesman.—*Swift.*
Honest and taught, your first son is a squire;
The next a tradesman, weak and much a liar.
—*Pope, Moral Essays, I. 151.*

Penitens was a busy notable tradesman, very
prosperous in his dealings, but died in the thirty-
fifth year of his age.—*Lane.*

Tradespeople. s. Tradesfolk: (the word under notice being, at present, the com- moner one.).

Tradewind. s. Monsoon.

Thus to the eastern wrath through storms we go,
But now, the Cape once doubled, fear no more;
A constant trade-wind will securely blow,
And gently lay us on the spicy shore.
Dryden, Annus Mirabilis, cxxv.

His were the projects of perpetuum mobile and
of increasing the trade-wind by vast plantations of
reeds.—*Archibald.*

The regularity of the trade winds is disturbed in
some places by local causes, and chiefly by the supe-
rrefaction of the air over land heated by the
sun's rays. They extend farther to the northward
or southward according as the sun's declination is
north or south; and in some places they become
periodical, blowing one half of the year in one
direction, and the other half in the opposite one.
In the great Pacific ocean, however, the trade wind
blows with a uniform and gentle breeze all the year
round. The name of trade winds was given to them
from their important influence in commerce.—
*Brande and Cox, Dictionary of Science, Literature,
and Art.*

Trading. part. adj.

1. Engaged in trade.

Scarcely known before the end of the sixth cen-
tury, Anallu ran a brilliant career, as a free and
trading republic, which was checked by the arms of
a conqueror in the middle of the twelfth. —*Hallam,
View of the State of Europe during the Middle
Ages.*

Alexandria under the Romans was still the centre
of the trading world, not only having its own great
trade in corn, but being the port through which the
trade of India and Arabia passed to Europe, and at
which the Myrian vessels touched in their way to
Italy.—*Sharpe, History of Egypt, ch. xiii.*

2. Applied as a term of contempt or dis- approbation to any one whose actions as a public man are regulated by his interest rather than his principles; venal; having the character of an adventurer; being in the market; having a price.

Mr. Canine reason'd himself into a belief that
he was wrot to profess, that no man can serve his
country with effect out of office. . . . A more pernicious
notion never enter'd the mind of a public man, nor
one more fitted to undermine his public virtue. It
may be made the cloak for every species of flagitious
and sordid calculation; and what in him was only
a sophistical self-deception, or a mere illusion of
dangerous self-love, might have been, by the com-
mon herd of trading politicians, used as the cover
for every low and despicable, and unprincipled
artifice.—*Lord Brougham, Historical Sketches of
Statesmen during the Reign of George III., Mr.
Canning.*

3. Having a trade wind.

They on the trading floor ply towards the pole.
Milton, Paradise Lost, II. 640.

Trading. verbal abs. Act of one who trades; practice of a trade.

He commanded these servants to be called unto
him to whom he had given the money, that he might
know how much every man had gained by trading.
Luke, xix. 13.

Tradition. s. [Fr.; Lat. traditio, -onis; trado—I deliver; pass, part. traditus.]

1. Act or practice of delivering accounts from mouth to mouth without written memo- rials; communication from age to age.

To learn it we have tradition; namely, that so we
believe, because both we from our predecessors, and
they from theirs, have so received.—*Hosker, Eccle-
siastical Polity.*

Tradition, in theology, . . . is commonly employed
to denote any doctrine or alleged fact, delivered or
handed down, and received on the faith that the
first to whom it was delivered received it from an
authentic source. Hence, it is used, generally, to
denote that body of doctrine and discipline supposed
to have been put forth in the first Christian age, and
not committed to writing, the word being thus used
in a contrary sense from Scripture. Such tradi-
tions are said to be of two sorts—*canon* of doctrine
(such as that of the Trinity), which is
commonly said to be directly affirmed by tradition
and proved by Scripture; and *tradition* of rites
and ceremonies, called by Hosker *traditiones eccle-
siasticæ*.—*Cox, in Brande and Cox, Dictionary of
Science, Literature, and Art.*

2. Anything delivered orally from age to age.

They the truth
With superstitious and traditions talut,
Left only in those written records pure.
Milton, Paradise Lost, xii. 511.

It is well known to have been a general tradition
amongst those nations, that the world was made
and had a beginning.—*Lishop Wilkins.*

Our of 1 scientists
From no blind zeal or fond tradition rise;
But, saved from death, our Archives yearly pay
These grateful honours to the God of day.
*Pope, Translation of the First Book of the
Theod of Statius.*

If it be demanded, by what cause it happened
that a few sparks of ancient learning survived
throughout this long winter, we can only ascribe
their preservation to the establishment of Chris-
tianity. . . . The memory of Greece and Rome would
have been feebly preserved by tradition, and the
monuments of those nations might have excited, on
the return of civilization, that vague sentiment of
speculation and wonder with which men now con-
template Persepolis or the Pyramids.—*Hallam, View
of the State of Europe during the Middle Ages, pt. I.
ch. ix.*

3. Traditional practice; old custom.

Throw away respect,
Tradition, form, and ceremonious duty.
Shakespeare, Richard II. III. 2.

4. Act of giving up; delivery. Latinism.

A deed taken effect only from the tradition or
delivery.—*Sir W. Blackstone, Commentary on the
Laws of England.*

Traditional. adj.

1. Delivered by tradition; descending by oral communication; transmitted by the foregoing to the following age.

Whence may we have the infallible traditional
sense of Scripture, if not from the heads of their
church?—*Archbishop Tillotson.*

If there be any difference in natural parts, it
should seem the advantage lies on the side of
children born from wealthy parents, the more tradi-
tional cloth and luxury which render their body
weak, perhaps refining their spirits.—*Swift.*

A belief in judicial astrology can now only exist in

the people, who may be said to have no belief at all; for more traditional sentiments can hardly be said to amount to a belief.—*I. Marriot, Curiosities of Literature, English Antiquaries.*
The proverb of a father bequeath the inheritance of a son, the mistress of a family perpetuated her through her household, the workman condensed some traditional word of his craft into a proverbial expression.—*Ibid., The Philosophy of Proverbs.*

2. Observant of traditions, or idle rites: (so explained by Johnson, and, at the same time condemned as 'not used, nor proper').

God forbid

We should infringe the holy privilege

Of sanctimony!—

You are too senseless obstinate, my lord;

Too ceremonious and traditional.

Shakespeare, Richard III. iii. 1.

Traditionally. *adv.* In a traditional manner.

1. By transmission from age to age.
There is another channel wherein this doctrine is traditionally derived from Saint John, namely, from the clergy of Asia.—*T. Burnet, Theory of the Earth.*

2. From tradition without evidence of written memorials.

It crosseth the proverb, and Rome might well be built in a day, if that were true which is traditionally related by Strabo, that the great cities Antioch and Tarsus were built by Saracenus both in one day.—*Sir T. Browne, Vulgar Errors.*

Traditionary. *adj.* Delivered by tradition; transmissive; handed down from age to age.

Suppose the same traditionary strain
Of rigid manners in the house of him
Inventive truth, an old plain Sabinian heart.

Dryden, Translation of Juvenal, x. 100.
Oral tradition is more uncertain, especially if we may take that to be the traditionary sense of texts of Scripture.—*Archbishop Tillotson.*

The time of our Saviour, which in so few years had gone through the whole earth, was continued and perpetuated by such records as would preserve the traditionary account of him to after ages.—*Addison, On the Christian Religion.*

The mechanical execution [in the church architecture of the fifteenth century] continued to prove, and is so far beyond the powers of intellectual powers of these times, that some have ascribed the principal ecclesiastical structures to the fertility of freemasons, depositaries of a concealed and traditionary science.—*Hutton, View of the State of Europe during the Middle Ages, pt. ii. ch. iv.*

The period in the Papal history has arrived which in the Italian writers is called the happy epoch of civility; it lasted more than seventy years. Rome is no longer the Metropolis of Christendom; the Pope is a French prelate. The successor of St. Peter is not on St. Peter's throne; he is ennobled with none of the traditionary mystery or sanctity of the Eternal City; he has abandoned the holy bodies of the Apostles; the churches of the Apostles.—*Milman, History of Latin Christianity, b. xiii. ch. i.*

His [Hay's] celebrated English opera [the Beggar's Opera], as it was the first attempt of the kind, still remains the only one that has been eminently successful. Now, indeed, that much of the wit has lost its point and application to existing characters and circumstances, the dialogue of the play, apart from the music, may be admitted to owe its popularity in some degree to its traditionary fame; and still what is temporary in it is interwoven with a sufficiently diffused, though not very rich, vein of general satire, to allow the whole to retain considerable piquancy.—*Cruik, History of English Literature, vol. ii. p. 225.*

Traditioner. *s.* Traditionist: (if used at present it would probably imply contempt).

The eastern traditioners mean by this a continual sadness and contrition of heart.—*Gregory, Notes on Scripture, p. 123: ed. 1694.*

Traditionist. *s.* One who adheres to, supports, relies on, tradition.

We are not able to ascertain who the Masorites or traditionists were, that settled the present standard of the Hebrew Scriptures.—*Pirkington, Remarks upon several Passages of Scripture, p. 15: 1750.*

Traditive. *adj.* Transmitted or transmissible from age to age.

The traditive interpretation and practice of the church.—*Jeremy Taylor, On Consecration.*

Suppose we on things traditive divide,
And both appeal to Scripture to decide.

Dryden, Hind and Panther, ii. 100.

Traditor. *s.* One who betrays: (word for word, traitor in its Latin form).

There were in the church itself traditors, content to deliver up the books of God by composition, to the end their own lives might be spared.—*Hooker, Ecclesiastical Polity, b. v. § 62. (Ord. MS.)*

The lally, the ministers, the deacons, the preb-
yters, say the bishops themselves, the princes and
chief of all, proved traditors.—*Jeremy Taylor, Eusebius Averted, p. 25. (Ord. MS.)*
Such men were called churchmen who had been
bishops of cities, but had fallen from their honour
by communicating in Gentile sacrifices, and by
tradition.—*Ibid., p. 32. (Ord. MS.)*

Tradilla. *s.* Name of cards so called.

Pope was her favourite author: his Rape of the
Lock her favourite work. She once did me the
favour to play over with me (with the cards) his
celebrated game of Ombre in that poem; and to
explain to me how far it agreed with, and in what
points it would be found to differ from, tradilla.
Her illustrations were apposite and poignant; and
I had the pleasure of sending the substance of them
to Mr. Bowles; but I suppose they came too late to
be inserted among his ingenious notes upon that
author.—*C. Lamb, Essays of Elia, Mrs. Battle's
Opinions on Whist.*

Traduco. *v. a.* [Lat. *traduco*, from *trans* =
over, across + *duco* = I lead.]

1. Censure; condemn; represent as blame-
able; calumniate; decry.

The best statement that Satan hath, who knoweth
his kingdom to be no one way more shaken than by
the publick devout prayers of God's church, is by
traducing the form and manner of them, to bring
them into contempt, and so slack the force of all
men's devotion towards them. *Hooker, Ecclesiastical Polity.*

Those particular ceremonies which they pretend
to be so scandalous, we shall treat thoroughly sift,
when other things also traduced in the publick
dances of the church are, together with these, to be
touched.—*Ibid.*

For traducing such

As are above us . . . we are as innocent

As those that are born blind.

Manning, The Roman Actor, l. 3.

Whilst calumny has such potent abilities, we are
not to wonder at its growth; as long as men are
as and desecrating they will be traducing.

Dr. H. More, Government of the Tongue.
From that preface he took his hint; though he
had the likeness not to acknowledge his benefactor,
but instead of it to traduce me in libel.—*Dryden, Preface to the Tales and Fables.*

2. Propagate; increase or continue by de-
riving one from another.

None are so gross as to contrail for this,
That souls from bodies may traduce be;

Sir J. Denham, Immortality of the Soul.

From these only the race of perfect animals were
propagated and traduced over the earth.—*Sir M. Hale.*

Some believe the soul is made by God, some by
angels, and some by the generant; whether it be
lately created or traduced hath been the great
ball of contention to this latter age.—*Glanville, Neposia Scrittifica.*

Traducement. *s.* Censure; obloquy.

Rome must know

The value of her name: 'twere a convenient
Worse than a theft, no less than a traducement.
To bibe your doings.—*Shakespeare, Coriolanus, l. 9.*

If any take exceptions, . . . most of them are but
traducements and professions.—*Howell, Letters, iv. 23.*

Traducer. *s.* One who traduces.

1. False censurer; calumniator.

St. Austin tells the traducers, that 'tis for want
of a serious and solid consistency, that they plunge
themselves into such gross misrepresentations.—*Hibliotheca Bodleiana, l. 327: 1720.*

2. One who derives.

Traducible. *adj.* That may be derived.

Though oral tradition might be a competent
discoverer of the original of a kingdom, yet such a
tradition were incompetent without written monu-
ments to . . . to us the original laws, because they
are of a complex nature, and therefore not orally
traducible to so great a distance of ages.—*Sir M. Hale.*

Traduct. *v. a.* [Lat. *traductus*, pass. part.
of *traduco*; *traductio*, -onis.] Derive.
Rare.

Consider our nature, as it is now depraved in us,
and by the corrupt conduct of our sinful parents
traducted unto us.—*Fotherby, Athanasius, p. 261: 1623.*

Dr. H. More, Pre-eminence of the Soul, xci.

Traduction. *s.* [Lat. *traductio*, -onis.]

1. Derivation from one of the same kind;
propagation.

The patrons of traduction accuse their adversaries
of affronting the attributes of God; and the asserters
of creation impeach them of violence to the nature
of things.—*Glanville.*

If by traduction came thy mind,

Our wonder is the less to find

A soul so charming from a stock so good;

Thy father was transfused into thy blood. *Dryden.*

2. Tradition; transmission from one to an-
other.

Touching traditional communication and tradu-
tion of truths figurative and engraven, I do not
doubt but many of them have had the help of that
derivation.—*Sir M. Hale.*

3. Conveyance; act of transferring.

Since America is divided on every side by con-
siderable wars, and no passage known by land, the
traduction of letters could only be by shipping;
though this was a method used for the traduction
of useful cattle from hence thither, yet it is not
credible that bears and lions should have so much
care used for their transmigration.—*Sir M. Hale, Origination of Mankind.*

4. Transfusion.

The reports and figures have an agreement with
the figures in rhetoric of repetition and traduction.
—*Baron.*

Traductive. *adj.* Derivable; deducible.

It will consist only of a number of instances of
similar customs of a striking nature, which all
would judge imitations and traductive, if that
system be true.—*Bishop Warburton, Letters to
Bishop Hurd, letter xcv.*

Sabaian, he followed the example of that wise king
in nothing more than by advancing the trafúque of
his people.—*Addison.*

2. Commodities; subject of traffic.

You'll see a draggled dame
From Billingsgate her bely trafúque bear. *Gay.*

Tráfúke. *v. v.* [spelt with *k*, because the
addition of *i*, in the participle immediately
upon *e* would render the *t* liable to be
sounded as *s* (*trafficking*).]

1. Practise commerce; merchandise; ex-
change commodities.

They first plant for corn and cattle, and after en-
large themselves for things to trafúke withal.—*Baron, Advice to Valliers.*

2. Trade meanly or mercenarily.

Saucy and overbold! how did you dare
To trade and trafúke with Macbeth,
In riddles and affairs of death?

Shakespeare, Macbeth, iii. 5.
How hast thou dared to think so vilely of me,
That I would condescend to thy mean arts,
And trafúke with thee for a prince's ruin? *Rome.*

Tráfúke. *v. a.*

1. Exchange in traffic. *Rare.*

In it are so many Jews very rich, and so great
traffúkers, that they have most of the English trade
in their hands.—*Addison.*

Tráfúking. *verbal abs.* Bargaining; deal-
ing; jobbing.

The main business about which the archbishop
came, was the trafúking of a marriage between
Lewis the Dauphin, though then very young, with

Margaret, daughter to King James.—*Drummond, History of James*, p. 6.

Untimely smother'd in their dusky graves.

Shakespeare, Richard III. iv. 4.

Tragicomedy. s. [Fr. *tragicomédie*.] Drama compounded of merry and serious events.

On the world's stage, when our applause grows high,

For acting here life's *tragicomedy*,

The lookers on will say we act not well,

Unless the last the former scenes excel.

Sir J. Denham, Of Old Age, pt. iii.

The faults of that drama are in the kind of it, which is *tragicomedy*; but it was given to the people.—*Dryden*.

We have often had *tragicomedy* upon the English theatre with success; but in that sort of composition the tragedy and comedy are in distinct scenes.—*Gay*.

Tragicomedy [is] a compound name, invented to express a class of dramatic compositions which should partake both of tragedy and comedy. If the mixture of serious with humorous portions in the piece alone entitles it to this name, then all the plays of Shakespeare (with the single exception of the Merry Wives of Windsor, to which some add the Twelfth Night) belong to this class; as do, indeed, almost all the works of the old English dramatists. But Trissotin and Cressida alone, of the plays of Shakespeare, bear this title in old editions. French critics define the distinction to be, that the event of the *tragicomedy* is not unhappy or bloody.—*Brand and Cox, Dictionary of Science, Literature, and Art*.

Tragicomical. adj. [Fr. *tragicomique*.]

Of the same soil their nursery prepare
With that of their plantation, lest the tree
Translated should not with the soil agree.

The gods their shapes to winter birds *translate*,
But both obnoxious to their former fate.

Id., Translation from Ovid, House of Sleep.

To go to heaven is to be *translated* to that kingdom you have loved for, to enjoy the glories of eternity. — *Archbishop p. Wake*.

2. Particularly used of the removal of a bishop from one see to another.

Shakespeare, Timon of Athens, i. 1.

Happy is your grace,
That can *translate* the stolidness of fortune
Into so quiet and so sweet a sigh.

Id., As you like it, li. 1.

Addison, and Addison's devoted followers, pronounced both the versions good, but maintained that Tickell's had more of the original. The town gave a decided preference to Pope's. We do not think it worth while to settle such a question of precedence. Neither of the rivals can be said to have *translated* the mind, unless, indeed, the word translation be used in the sense which it bears in the Midsummer Night's Dream. When Bottom makes his appearance with an ass's head, instead of his own, Peter Quince exclaims, 'Bless thee! Bottom, bless thee! thou art *translated*!' In this sense, undoubtedly, the readers of either Pope or Tickell may very properly exclaim, 'Bless thee! Homer; thou art *translated* indeed.' — *Murray, Critical and Historical Essays, Life and Writings of Addison*.

5. Interpret in another language; change into another language retaining the sense.

I can construe the action of her familiar style, and the hardest turn of her behaviour, to be King-dish right, is, I am Sir John Falstaff. — He hath studied her will, and *translated* her out of heavenly into English. — *Shakespeare, Merry Wives of Windsor, i. 3.*

Read this ere you *translate* one bit
Of books of high renown. *Swift*.

From slabs obscure and shady. *Quarles*.

And colder brains like colder climates are.

Of *translations*, the better I acknowledge that which cometh nearer to the very letter of the very original verity. — *Hooker, Ecclesiastical Polity*.

Translator. s.

1. One who translates.

A new and nobler way than deat pursue,
To make *translations* and *translators* too.

Sir J. Denham, To Sir Richard Fanshawe.

No translation our own country ever yet produced, such came up to that of the Old and New Testament; and I am persuaded, that the *translators* of the Bible were masters of an English style much sifter for that work than any we see in our present writings, the which is owing to the simplicity that runs through the whole. — *Swift*.

2. Translator of soles; cobbler.

Translatory. s. Transferring. *Rare*.

The *translatory* is a lie that transfers the merits of a man's good action to another more deserving. — *Arbuthnot*.

Translucency. s. Translucent character.

The spheres
That sight thy crystalline *translucency*.

Sir J. Davies, Witte's Pilgrimage, sign. G. 4. b.

Lumps of rock crystal heated red hot, then quenched in fair water, exchanged their *translucency* for whiteness, the ignition and extinction having cracked each lump into a multitude of minute bodies. — *Jayle, Experiments and Considerations touching Colours*.

Translucent. adj. [Lat. *lucere* = I shine; pres. part. *lucens*, -entis.] Trans-parent; diaphanous; clear; giving a passage to the light. (So the explanation stands in the previous editions. At present, in mineralogy at least, it is rather contrusted than identified with transparent: both mean

'giving a passage to light.' *Transparency*, however, denotes a perfect passage, as in glass, where both the colour and form of objects beyond is clearly seen; *translucency*, an imperfect passage, where there is a perception of light, but not of outline and colour, for the parts beyond.)

souls of men *transmigrate* into species answering
their former natures, some men must live over many
worlds.—*Ibid.*

Their souls may *transmigrate* into each other.—
Huvel.

When men are ignorant, they must be superstitious;
and wherever superstition exists, it
to organize itself into some kind of system, which it
makes its home. If you drive it from that home, it
will find another. The spirit *transmigrates*; it assumes
a new form; but still it lives.—*Buckle, History of Civilization in England, vol. ii. ch. iii.*

Transmigration, s. [Lat. *migratio*, -onis; *migro*; pass. part. *migratus*.] Passage from one place or state into another.

She thought it not a tale here.

Sir J. Denham, On the Death and Burial of Chaucer.

When thou wert form'd, heav'n did a man begin,
But the brute soul by chance was shuffled in:
In woods and wilds thy manurely maintain,
Where valliant beasts, by force and rapine, reign.
In life's nest scene, if *transmigration* be,
Some bear or lion is reserved for thee.

Dryden, Aurengzebe, ll. 1.

Transmigrator, s. One who transmigrates.

literature, it was owing to one of these causes;
either to some *transmigrator* from those parts
coming and settling among them, or else to their
going thither for instruction.—*Ellis, Knowledge of Divine Things, p. 122.*

Transmission, s. [Lat. *missio*, -onis; sending; *missus*, pass. part. of *mittere* = I send.] Act of sending from one place to another, or from one person to another.

the glass. *Sir I. Newton, Opticks.*

The Protestant churches hold that the scriptures
of the Old and New Testament contain everything

since the time of the Apostles.—*Sir H. C. Lewis, On the Influence of Authority in Matters of Opinion, ch. v.*

transmittable into one another.—*Arbutnot, On the Nature and Choice of Aliments.*

Transmutation, s. [Lat. *mutatio*, -onis; *mutatio* = I change into something else; *muta* = I change; pass. part. *mutatus* = changed. *Alteration*, &c., which stands as

in the previous editions; gives the full
force of *trans*; i.e. it indicates that there
is not only change, but change into some-
thing other (*alter*) than the thing changed].

1. Change into another nature or substance; alteration of the state of a thing.

Am not I old Nig's son, by birth a pedlar, by edu-
cation a cardinal, by *transmutation* a bear-herd?
—*Shakespeare, Taming of the Shrew, Induction, sc. 2.*

The *transmutation* of phlogiston into another
is 'inter ignis in natura'; for the *transmutation* of
species is, in the vulgar philosophy, pronounced
impossible; but seeing there appear some unques-
tioned instances of it, the opinion of impossibility is to be
rejected, and the means thereof to be found out.—
Bacon.

The conversion into a body merely new, and
which was not before; as silver to gold, or iron to
copper, is better called, for distinction sake, *trans-
mutation*—*Id.*

The oblation of the day, which was then the
sabbath, died and was buried with him, but in a
manner by a diurnal *transmutation* revived again
at his resurrection.—*Bishop Pearson, Exposition of the Creed, art. v.*

The changing of bodies into light, and light into
bodies, is very comfortable to the course of nature,
which seems delighted with *transmutation*. Water,
which is a very fluid tasteless salt, she changes by
heat into vapour, which is a sort of air, and by cold
into ice, which is a hard, pellucid, brittle, fusible
stone; and this stone returns into water by heat,
and water returns into vapour by cold.—*Sir I. Newton.*

The supposed change of worms into flies is no

But if the reason was suppressed with such un-
mitigated perscription, the imagination, while it
shrunk from those metaphysical abstractions, which
are so congenial to eastern mysticism, had full scope
in the ordinary occurrences of life, which it *trans-
muted* into perpetual miracle.—*Milman, History of Latin Christianity, b. iii. ch. vi.*

Transom, s. [Lat. *transenna*] Thwart beam, or lintel; (in *Church Architecture*); specially applied to the horizontal mullion or cross-bar, of windows; see extracts.)

muted* into perpetual miracle.—*Milman, History of Latin Christianity, b. iii. ch. vi.*

Transparency, s. [Fr.] Clearness; diaphan-
eity; translucence; power of transmitting light.

Transparency, s.

1. Transparency: (this, in this sense, is, per-
haps, now the commoner word; in the pre-
vious editions, however, it is not entered).

A poet of another nation would not have dwelt
so long upon the clearness and *transparency* of the
stream; but in Italy one seldom sees a river that
is extremely bright and limpid, most of them being
muddy.—*Addison.*

Another cause is the greater *transparency* of the
vessels occasioned by the thinness and delicacy of
their coats.—*Arbutnot.*

2. Transparent scene (on the stage).

Transparent, adj. [Lat. *apparere* = I appear, pres. part. *apparens*, -entis.] Pervious to the light; clear; pellucid; diaphanous; not opaque. See *Translucent*.

eye; for there be many wise men that have secret

of a Lady at Bath.*

Her brow appeared all of crystal, and so wonder-
fully transparent, that I saw every thought in
her heart.—*Adrian.*

Their fluid bodies half dissolved in light.

Transparently. *adv.* In a transparent man-
ner; clearly; so clearly as to be seen
through.

Bodies almost transparently fair. *Whitlock, Ob-
servations on the Present Manners of the English,*
p. 230.

In 'transparently evident' we keep up
the metaphor from the sense of sight; in
'palpably manifest' we use an equivalent
from that of touch.

Transpass. *v. a.* Pass over. *Rare.*

The river Hypsosis, or, as Ptolemy calleth it,
Bhmas, was Alexander's non ultra; which yet he
transpassed, and set up altars on the other side.—
Gregory, Notes on Scripture, p. 75: 1684.

Transpass. *v. n.* Pass by; pass away: (not so
proper as the verb active. (Todd.) Neither
are proper. Transpass is the current form,
and, at the same time, the correct one.
Each approximately translates *transgress*;
trans = over + *gressus* = step.) *Rare.*

Which shall so soon transpass,
Though far more fair than is thy looking-glass.

Daniel.

Transpious. *adj.* [Lat. *transpiro* I see
through; *transpius* = seeing through.]
Transparent; pervious to the sight.

What if that light,
Sent from her through the wide transpious air,
To the terrestrial moon be as a star?

Its earthly gross, yet let it feed awhile
On the fat refuse.

Transpierce. *v. n.* [N.Fr. *transpercer*.]
Penetrate; make way through; permeate.
A mind, which through each part infused doth
pass.
Fashions and works, and wholly doth transpierce
All this great body of the universe.

Sir W. Raleigh.

His fearful spear, which, hissing as it flew,
Pierced through the yielding planks of jointed
wood.

The sides transpierced return a rattling sound,
And groans of Greeks involved came issuing through
the wound.

Dryden, Translation of the Æneid, ii, 63.

Transpiration. *s.*

1. Emission in vapour.

transpiration of air, will carry farther, and pierce
deeper, my experience cannot discern.—*Sir T.
Browne, Vulgar Errors.*

The transpiration of the obstructed fluids is im-
agined to be one of the ways that an inflammation is
removed.—*Sharp, Surgery.*

2. In *Physics*; of *gases*. See extract.

Gases exhibit peculiar properties in passing
through tubes of very small diameter. The rates at
which they flow through such tubes vary with the
composition of the gas, but bear a constant relation
not coinciding with density, diffusion, or any other
known property. These fundamental peculiarities
are termed by Graham those of *transpiration*. The
experiments by which they were established were
analogous to those of Poiseuille and Hagenau on the
flux of liquids through tubes of great length in
comparison with diameter. The transpiration of a
gas is uninfluenced by the material of which a tube
is constructed; it increases with pressure—the
greater the density, the shorter the time of *trans-
piration*; it is inversely proportional to the length
of the tube; slower at low than at high tempera-
tures. Oxygen has the slowest rate of *transpiration*,
and may be taken as the unit for purposes of com-
parison.—1; chlorine is 1.3; hydrogen 2.28. Gra-
ham considers that *transpiration* is probably the
resultant of a kind of elasticity depending on the
absolute quantity of heat, latent as well as sensible,
which different gases contain under the same vol-
ume.—*Nord, in Brande and Cox, Dictionary of
Science, Literature, and Art.*

Transpire. *v. n.* [Fr. *transpirer*; Lat. *spiro*
= I breathe.]

1. Be emitted by insensible vapour.

The nuts fresh got are full of a soft pulpy matter,
which in thin transpires, and passes through the
shell.—*Woodward.*

2. Escape from secrecy to notice: ('a sense,'
Johnson remarks, 'lately innovated from
France, without necessity.' See extract).

Do you know the history of his [Johnson's] aver-
sion to the word *transpire*?... The truth was, Lord
Bolingbroke, who left the Jacobites, first used it;
therefore, it was to be condemned! He should have
shown what world would do for it, if it was unne-
cessary.—*Lord Marchmont, in Ducell's Life of
Johnson.*

If they have raised a battery, as I suppose they
have, it is a unaked one, for nothing has transpired.
—*Lord Chesterfield.*

transplanted out of his cold barren diocese of St.
David's into a warmer climate.—*Lord Clarendon,
History of the Grand Rebellion.*

Transplantation. *s.*

1. Act of transplanting or removing to an-
other soil.

It is confessed, that love changed often doth no-
thing; nay, it is nothing; for love, where it is kept
fixed to its first object, though it burn and yet it
warms and cherishes, so as it needs no *transplan-
tation*, or change of soil, to make it fruitful.—*Sir J.
Suckling.*

2. Conveyance from one to another.

transplantation of diseases, and transference of
blood!—*Baker.*

times greater rogues than before.—*Swift.*

What are those rules, I pray?—Why, sir, my first rule is the rule of transposition, or regular duplex; changing verse into prose, or prose into verse, alternative as you please. Well; but how is this done by rule, sir?—Why thus, or; nothing so easy when understood. I take a book in my hand, either at home or elsewhere, for that's all one; if there be any wit in it, as there is in no book but has some; I *transposé* it; that is, if it be prose put it into verse (but that takes up some time), and if it be verse put it into prose.—McCluik, Mr. Bayes, that putting verse into prose should be called *transposing*.—By my troth, sir, 'tis a very good notion, and hereafter it shall be so.—*Duke of Buckingham, The Rehearsal*, i. 1.

Trap, or Tráp-réck. s. In *Geology*. See extract.

When geology was first studied, a number of rocks were found to be similar in general appearance and composition, while all were remarkable for being spread out in tabular or flat masses, one such that mass extending beyond another, so that there was a rough resemblance to stairs. These rocks were named after a Swedish author *trappa*, the Swedish word for steps or stairs, and the name *trap* has ever since been received in reference to these. They have long been recognised as belonging to the class seen in volcanic countries, and generally called *Lava*, being, in fact, the melted material poured out from an active volcano in the state of a thick paste, and spreading itself over the surface adjacent. A succession of eruptions produces a series of steps; and where no volcano now exists, the old erupted lavas often remain. Of the various tabular erupted rocks thus named, basalt is the most distinctly an ancient lava, and is the most important. Greenstone, whinstone, tondstone, and others, are names of varieties of basalt, and are also *trap-rocks*.—*Anderson, in Branda and Orr, Dictionary of Science, Literature, and Art*.

Trapéze. s.

Trapes. s. Explained in the preceding edition as 'an idle slatternly woman.' To complete the notion thus suggested, we should probably add 'one who, for the mere sake of showing herself and being seen, frequents public places.' In Shadwell's Comedy of Tunbridge Walks, Miss Trapes is one of the characters. Whether the common come from the proper name, or *rice versa*, is uncertain. The verb comes from the noun. Hence the true form is *trapes*. Of this in the previous editions there are two entries; one as *trapeze*, the other as *trapes*; the latter being connected with *drub*, and considered the better form. 'To go *trapesing* about,' is an expression occasionally heard, and it is preferable to '*trapping*.'

It was his choice, or chance, or curse,
To espouse the cause for better or worse;
... he found the sullen *trapes*
Peculiar with the devil's worms, and claps.

Travertin. s. [Italian, travertino; Lat. lapis Tiburtinus = stone of Tibur.] In Geology. See extract.

Travertin [is] a white calcareous stone, formed by
the action of mineral springs either at the bottom
of water upon the mud and other material there ac-
cumulated, when they issue under water, or when
shown from chemical solution in the waters of such
springs in sheets or strata, when the waters thus
loaded approach the surface of the ground and enter
into new combinations. Travertin is a modern de-
posit extremely abundant in volcanic districts. . . .
These springs, often called incrusting springs or
terrestrial wells, are such as form these deposits,
loaded with carbonate of lime, and continuing to
flow from century to century, they are capable of
producing results in the way of deposit very much
larger than could be thought possible. —*Anders, in

- Treason, s.** [Fr. *trahison*.] See extract.

Treason [is] an offence committed against the
dignity and majesty of the commonwealth: it is
divided into high treason and petit treason. High
treason is an offence against the security of the
commonwealth, or of the king's majesty, whether
by imagination, word, or deed; as to compass or
furnish treason, or the death of the prince, or the
queen consort, or his son and heir-apparent; or to
deflower the king's wife, or his eldest daughter un-
married, or his eldest son's wife; or levy war against
the king in his realm, or to adhere to his enemies by
aiding them; or to counterfeit the king's great seal,
privy seal, or money; or knowingly to bring false
money into this realm counterfeited like the money
of England, and to utter the same; or to kill the
king's chancellor, treasurer, justice of the one bench,
or of the other; justices in eyre, justices of assize,
justices of oyer and terminer, when in their place
and doing their duty; or forging the king's seal
manual, or privy signet; or diminishing or impair-
ing the current money; and, in such treason, a man
forfeits his lands and goods to the king; and it is
called treason paramount. Petit treason is when a
servant kills his master, a wife her husband, a secular
or religious man his prelate: this treason gives
forfeiture to every lord within his own fee: both
treasons are capital.—*Cowell.*

Man disobeying,
Disloyal breaks his fealty, and thus
Against the high supremacy of heaven;
To expiate his treason hath sought left.

Cull his earth-bound root? *Id. Macbeth*, iv. 1.

It is pleasant to look upon a *tree* in summer covered with green leaves, thicked with blossoms, or laden with fruit, and casting a pleasant shade: but to consider how this *tree* springs from a little seed, how nature shaped and fed it till it came to this greatness, is a more rational pleasure.—*T. Burnet, Theory of the Earth*.

Trees shoot up in our great steams, and at a good distance from the earth spread into branches; thus gooseberries are shrubs, and oaks are *trees*.—*Locke*.
Trees and shrubs, of our native growth in England, are distinguished by Ray. 1. Such as have their flowers disjunct and remote from the fruit; and these are, 1. Nucleiferous ones; as, the walnut *tree*, the hazel-nut *tree*, the beech, the chestnut, and the common oak. 2. Confertous ones; of this kind are the Scotch fir, male and female; the pine, the common alder *tree*, and the birch *tree*. 3. Bacciferous, as the juniper and yew *trees*. 4. Lanthernous ones; as, the black, white, and trembling poplar, willow, and osiers of all kinds. 5. Such as bear their seeds having an imperfect flower, in leafy membranes; as, the horse-leaved. 6. Such as have their fruits and flowers contiguous; of these some are paniciferous; as, apples and pears; and some bacciferous; as, the *tree* or service *tree*, the white hawthorn, the wild rose, sweet briar, currant, the great hillyery, haw, hony-suckle, &c. Paniciferous ones, whose fruit is partly large and soft, with a stone in the middle; as, the blackthorn or sloe *tree*, the black and white bullace *tree*, the black cherry, &c. 3. **Genealogical or family tree; pedigree;** the different divisions of a family being exhibited as the branches of a tree in relation to one another and to the trunk. The metaphor is well illustrated by the terms *stock* and *branch*, as current in ordinary language.

By *trées* of pedigree, or fame or merit;
Though plodding heralds through each branch may trace,
